

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE
AMERICAN ALMANAC
AND
REPOSITORY
OF
USEFUL KNOWLEDGE,
FOR THE YEAR
1831.

BOSTON:

PUBLISHED BY GRAY AND BOWEN;

HILLIARD, GRAY, AND CO.; CARTER AND HENDEE; AND RICHARDSON, LORD,
AND HOLBROOK. — NEW YORK, G. AND C. AND H. CARVILL. — PHILA-
DELPHIA, JOHN GRIGG; AND CAREY AND HART. — BALTIMORE, E. J.
COALE. — CINCINNATI, C. D. BRADFORD AND CO.

DISTRICT OF MASSACHUSETTS, TO WIT.

DISTRICT CLERK'S OFFICE.

BE it remembered, that on the eleventh day of November, A. D. 1830, in the fifty-fifth year of the Independence of the United States of America, Gray & Bowen, of the said district, have deposited in this office the title of a book, the right whereof they claim as proprietors, in the words following, *to wit*.—"The American Almanac and Repository of Useful Knowledge, for the Year 1831." In conformity to the act of the Congress of the United States, entitled "An act for the encouragement of learning, by securing the copies of maps, charts, and books, to the authors and proprietors of such copies, during the times therein mentioned"; and also to an act, entitled "An act supplementary to an act, entitled, 'An act for the encouragement of learning, by securing the copies of maps, charts, and books to the authors and proprietors of such copies, during the times therein mentioned,' and extending the benefits thereof to the arts of designing, engraving, and etching historical and other prints."

JNO. W. DAVIS,
Clerk of the District of Massachusetts.

CAMBRIDGE:

PRINTED BY E. W. METCALF AND COMPANY,
Printers to the University.

P R E F A C E .

"THE main object of this work," as was stated in the first volume, **"is utility."** The Conductors engaged in the design under the impression that such a work was wanted by a numerous class in the community, and that, if well executed, it would meet with a good degree of success; and they have been gratified by the manner in which their attempt has been received.

In this volume the general character and design of the work remain unaltered; though the plan has been, in some particulars, changed. The first volume was divided into five parts; but the contents of this, though embracing as great a variety of subjects, have been formed into two general divisions, the First Part comprising the topics corresponding to those of the first two parts of the former volume, and the Second Part, the topics corresponding to those of the other three parts. For explanations respecting the astronomical department, the reader is referred to the Preliminary Observations of Mr. Paine, who has executed this portion with great labor and ability.

The large space occupied by the numerous and interesting details relating to the great eclipse of the 12th of February, has rendered it necessary to postpone several articles corresponding to those of the second part of the first volume.

The Second Part of the present volume is particularly characterized by containing a view of the general and state governments, the constitution of the United States, the executive government, the national legislature and judiciary, outlines of the constitutions of the several states, and complete lists of their governors from the first organization of the respective governments. This information is of permanent value, and will be useful, for reference, at any future period; but that portion of it which is unchangeable, having now been inserted in this volume, will not need to be repeated in the volumes which may follow.

The plan adopted with respect to the articles relating to the several states has left less space than could be wished for the notice of foreign countries; and although the information given respecting them will probably not be deemed an unimportant part of

the volume, yet it is less full than was intended : other useful matter has also been omitted for want of room.

It is impossible to give a complete enumeration of the sources from which information has been derived ; some of the principal ones, relating to foreign countries, are the English Royal Kalendar, the Englishman's Almanac, the British Almanac and Companion, the Almanach de Gotha, the Genealogischer-Historischer-und-Statistischer Almanach, published at Weimar, and various journals ; relating to our own country, the Laws of the United States, the Journal of the Executive Proceedings of the Senate, Official Documents of the General Government, the Register of Officers and Agents in the Service of the United States, the Directory of the Twenty-first Congress, the National Calendar, the Constitutions of the several states, the American, Historical, Chronological, and Geographical Atlas, works on the History and Geography of the different states, the Quarterly Journal of the American Education Society, Hazard's Register of Pennsylvania, Niles's Register, the State Registers of Maine, New Hampshire, Vermont, Connecticut, and New York, a variety of journals and other publications, together with private correspondence with gentlemen of every state in the Union. To those who have been so good as to communicate information, the Conductors return their grateful acknowledgments.

A full view of the Fifth Census of the United States will form an important article in the next volume. Though our own country must hold a prominent place in every number, yet copious details respecting foreign countries may be occasionally expected ; also essays on interesting subjects of a scientific and practical nature ; notices of important discoveries and useful inventions ; views of the state and progress of education ; and accounts of the proceedings of benevolent societies and associations for promoting religion, learning, philanthropy, and moral civilization. The Conductors take the liberty to request the purchasers of this volume to preserve it, as belonging to a series of volumes which, should they be able to execute their design, will be diversified in their contents, and embody such a variety of valuable matter as to form a library of useful knowledge, exhibiting the most important facts of contemporary history, the statistics of the globe, views of the state and progress of society, and miscellaneous information on the different departments of human knowledge and active life.

Cambridge, Nov. 15, 1830.

THE CONDUCTORS.

PRELIMINARY OBSERVATIONS ON THE ASTRONOMICAL DEPARTMENT.

THE year 1831 is peculiarly distinguished for phenomena worthy of the attention of the astronomers of the United States.

The eclipse on the twelfth of February is the first of a very remarkable series of five large eclipses of the sun, visible to us in the short term of seven years. The others happen as follows; the first on the 27th of July, 1832, total in Cuba; the second on the 30th of November, 1834, total in Charleston, Beaufort, &c., in South Carolina; the third on the 15th of May, 1836, annular near Cuba; and the fourth on the 18th of September, 1838, annular in three fifths of the States of the Union.

The eclipse of the present year, taking place near noon, will of course attract great attention. Should the sky be clear, at the time of the nearest approach of the centres of the Sun and Moon, much diminution of the light is not to be expected, probably not enough to render visible the planet Venus, then about 13 degrees *east* of the Sun; but a very considerable effect on the thermometer will doubtless be noticed; and, for half an hour, the power of a lens to produce combustion, by refracting the solar rays, will be entirely destroyed. If the day should be cloudy, the darkness will probably be complete.

In the fourth page there is a representation of the appearance of the sun, at those places where he will be eclipsed centrally, and where about 11½ digits on his *south* limb; by inverting the volume, the lower figure becomes a representation of his appearance at those places (New Orleans, Mobile, Savannah, Charleston, &c.) where the eclipse will be of about the same magnitude on the *north*.

The passage of the eclipse over the United States only, is represented in the map prefixed to the title-page; but a representation of the entire eclipse for the whole Earth may be easily obtained, by marking on a map of America and the contiguous oceans, the points passed over by the paths of the different digits, and connecting them by curve lines.

After the second sheet had been printed, it was discovered that the phases of the eclipse at the city of Mobile, in the state of Alabama, had been omitted; they are therefore inserted here, *viz.*—

Latitude, 30° 40' North; Latitude reduced, 30° 29' 57" North.

Longitude in degrees, 88° 11' W.; Long. in time, 5h. 52m. 44s. W.

Constant logarithms, 0.10357 9.66938 9.94650.

Duration of the eclipse	3	17	12.2	3	16	39.4	}
Digits eclipsed, 11° 35' 31" on Sun's north limb.							

At greatest obscuration, moon north 48.06"; at apparent \odot 48.08.

Point first touched at the beginning, 68° 59' from the vertex of the Sun.

The occultations this year are uncommonly numerous; and several

years must elapse before as many eclipses of stars of the first magnitude, and of the principal planets, can again be expected.

Particular mention has already been made of the most important use to which observations of eclipses of the sun, planets, and stars may be applied, *viz.* the determination of terrestrial longitude, which cannot be settled with equal precision, within the same space of time, in any other way. In the *Almanac* for 1832, all the occultations will be computed for Charleston, Washington and Boston.

The catalogue of those eclipses of the satellites of Jupiter, which are visible in some part of the United States, has been continued, for the purpose of affording an easy method of determining the longitude, with a very considerable degree of precision. On the 37th page a recent discovery respecting these eclipses is noticed, *viz.* that they might be observed at sea with sufficient accuracy for nautical purposes. The discoverer remarks, "that as it is difficult to follow the satellite when the ship has much motion, it will be advisable for the observer to limit his attention to the times when the vessel is at the extremity of her roll or pitch. An attendant, with a watch, should note the time when the observer is certain he does see the satellite previous to immersion, and certain that he does not see it after immersion; the mean of these times should be taken for the true time. The power applied to the telescope should be about 45." As the number of transit telescopes in the United States is very limited, the insertion of a catalogue of Moon-culminating stars was considered inexpedient at this time; but it may appear in the next number, should the insertion be recommended.

In the arrangement of the Calendar pages, there is but little alteration from that of the last year. The Equatorial Parallax and Semidiameter of the Moon have, however, been placed in the Appendix, and the beginning and end of twilight for every eighth day, and the distance of the centre of the Moon from the centre of the Earth, at each apogee and perigee, substituted.

The beginning and end of twilight, and the rising and setting of the Sun and Moon, are given for five places in the United States, situated in different latitudes; the *Almanac* is thus adapted to the inhabitants of every part of the country, as these particulars depend simply on the latitude, and are wholly independent of the longitude.

The column headed *Boston, &c.* will answer for all places north of latitude $41^{\circ} 32'$, that is, British Continental North America, Maine, New Hampshire, Vermont, Massachusetts, and Michigan; all but the southern extremity of New York and Rhode Island, the northern half of Connecticut, the northern third of Pennsylvania, the Connecticut Reserve in Ohio, and the northern extremities of Illinois and Indiana.

The column headed *New York, &c.* is intended for places situated between latitude $41^{\circ} 32'$ and $39^{\circ} 48'$, that is, the southern extremities of New York and Rhode Island, all but the northern third of Pennsylvania, all but the southern extremity of New Jersey, the central parts of Ohio, Illinois, and Indiana, and the northern third of Missouri.

The column headed *Washington, &c.* may be used between latitude $39^{\circ} 48'$ and $35^{\circ} 52'$, that is, throughout Maryland, Virginia, Delaware, the District of Columbia, and Kentucky, the northern half of Tennessee, the southern extremity of New Jersey, the southern third of Ohio and Indiana, the southern half of Illinois, all but the northern third of Missouri, and the northern third of North Carolina and Arkansas.

The column headed *Charleston &c.* is suited to places between latitude $35^{\circ} 52'$ and $31^{\circ} 24'$, that is, South Carolina, all but the southern extrem-

ity of Georgia, Alabama, and Mississippi, all but the northern third of North Carolina and Arkansas; the southern half of Tennessee; the northern half of Louisiana.

The column headed *New Orleans &c.* is adapted to places south of latitude $31^{\circ} 24'$, that is, all Florida and Texas, the southern half of Louisiana, and the southern extremities of Georgia, Alabama, and Mississippi.

The setting of the Moon is given from new moon to full, and the rising from full moon to new; the letters *M. A. m. a.*, to be found in these columns and in other parts of the Almanac, are used to denote *Morning* and *Afternoon*.

The time of the Phases of the Moon is computed for the meridian of Washington, but may be readily reduced to that for any other meridian, by adding or subtracting the difference of the longitude, according as the same is east or west of that city. The time of the moon's southing is computed for the *same* meridian. The variation, however, even in a remote part of the United States, will be inconsiderable.

The time of High Water is corrected for the difference of the Right Ascension of the Sun and Moon, and the distance of the Moon from the Earth. The small corrections depending on their declinations and our distance from the Sun, have been neglected as unimportant; indeed it has been ascertained, from a series of several hundred observations, that the corrections we have introduced will, in calm weather, give the time of high water within *fifteen* minutes, and, generally, much nearer. The difference between the time of high water at New York, Charleston, and Boston, was derived from the best authorities; but perhaps it has not been ascertained with the degree of accuracy that is to be desired. If our authorities are correct, the time of high water along the coast of Maine, New Hampshire, and Massachusetts, as far as Nantucket, is nearly the same as at *Boston*. Moreover, when it is high water in *New York*, it is nearly so in Long Island Sound, along the coast of New Jersey, Delaware, Maryland, Virginia, and North Carolina, as far as Cape Lookout, (with the exception of Sandy Hook and the entrance of Chesapeake Bay;) whilst along the coast of the southern part of North Carolina, of South Carolina, Georgia, and Florida, at Sandy Hook and the entrance of the Chesapeake, the time agrees very nearly with that in the column for *Charleston*; when greater accuracy is desired, reference should be had to the Tide Table on the 15th page. The time of the tide immediately preceding the southing of the moon, only, having been given, it should be corrected by the addition of half the difference when the time of the other tide is required.

The Planets are placed in the order in which they pass the meridian on the *first* day of each month, and their declinations are computed for the moment of their passage over the meridian of Washington.

The equation of time is the correction by which apparent is reduced to mean time. It is computed for *apparent noon* at Greenwich, and is to be applied with the actual sign; but when it is desired to reduce mean to apparent time, the sign of the equation should be reversed.

Apparent time has been generally used in this Almanac; the only exception being in what relates to eclipses, occultations, and their elements, the rising and setting of the Moon, the passage of the Moon and planets over the meridian, and the time of high water. The beginning and end of twilight, and the rising and setting of the Sun, could not be given in mean time, as was to be desired, without occupying too much room.

The Appendix is intended to answer all the essential purposes of a Nautical Almanac, and the insertion therein of the distances of the Moon from the planets, and of the proportional logarithm of the difference between the

distances, it is hoped, will be found an improvement on any Almanac hitherto published. The difficulty of measuring the altitude of stars at sea is so great, that the insertion of the Moon's distance from them is rendered nearly useless. Indeed it has been asserted, that it could be more accurately measured on a celestial globe, than by any instrument of reflection whatever. But the planets are so much more brilliant, that their distance from the Moon, and altitude, can generally be determined with great accuracy, in the twilight, and before the horizon becomes invisible. The insertion of the proportional logarithm not only very considerably facilitates the computation, but affords an opportunity of correcting a typographical error, should any exist.

The whole of the Ephemeris of the Sun was calculated from the celebrated Almanac of Professor Encke. It was reduced with great care, and with corrections for the second and higher orders of differences, from the meridian of Berlin to that of Greenwich. As Bessel's corrections of Carlini's Solar Tables were introduced by Encke into his Ephemeris, the place of the Sun, both with respect to the ecliptic and the equator, as well as his distance from the Moon, as given in the Appendix to this Almanac, will always be found to differ very considerably from the English Nautical Almanac, in the computation of which, these corrections were wholly unnoticed.

The places of six stars of the first magnitude, as determined at Konigsberg, are given for every fifteenth day; they afford an opportunity to those possessed of a transit telescope, of determining the time with the greatest precision; or if the time has been otherwise *accurately* ascertained, of adjusting the telescope to the meridian. The stars selected are situated as nearly equidistant as possible.

The most important astronomical phenomena visible in the United States, in 1832, are a transit of Mercury on the 5th of May, an eclipse of the Sun on the 27th of July, three occultations of Saturn, two of Uranus, one of Mercury, one of Venus, one of Mars, two of Aldebaran, besides many of the smaller stars.

The year 1832 will be rendered memorable, also, by the return to the perihelion of two of the three comets, whose orbits have been discovered to be elliptical, *viz.* that known as Encke's, whose period is about 1212 days, which will pass the perihelion about the 7th of May; and that known as Biela's, whose period is about 2460 days, which will pass the perihelion on the 27th of November, and the perigee on the 22d of October, when it will be distant from the earth about 51 millions of miles. The latter, when nearest the Sun, will have an elongation of about 120° , and be about 30° nearer the elevated pole than the Sun, and will, consequently, be in a very favorable situation for observation. The former, it is believed, will have, when brightest, a great southern declination, and will, if this supposition is correct, be wholly invisible throughout the United States.

R. T. PAINE.

Boston, November 12, 1830.

THE AMERICAN ALMANAC

FOR THE YEAR

1831.

I. THE CALENDAR AND CELESTIAL PHENOMENA FOR THE YEAR.

SIGNS OF THE PLANETS, &c.

☉ The Sun.	♄ Juno.	ing the same Longitude or
♁ The Earth.	♃ Pallas.	Right Ascension.
☾ ● ☾ The Moon.	♅ Ceres.	☐ Quadrature, or differing
☿ Mercury.	♃ Jupiter.	90° in Long. or R. A.
♀ Venus.	♄ Saturn.	♄ Opposition, or differing
♂ Mars.	♃ Herschel or Uranus.	180° in Long. or R. A.
♁ Vesta.	♄ Conjunction, or hav-	♄ ascend., ♄ descend. node.

The sign + prefixed to the latitude or declination of the Sun, &c. indicates that the same is *north*; but when the sign — is prefixed, the latitude or declination is *south*.

The letters *M. A.* or *m. a.* are used to denote *Morning* and *Afternoon*.

By *reduced* latitude is meant the latitude referred to the centre of the terrestrial spheroid. If the earth were a perfect sphere, the common latitude and the reduced latitude would be the same.

CHRONOLOGICAL CYCLES.

Dominical Letter	B	Solar Cycle	20
Lunar Cycle, or Golden Number	8	Roman Indiction	4
Epact	17	Julian Period	6544

SIGNS OF THE ZODIAC,

With the Mean Time (at Washington) of the Sun's Entrance into, and Continuance in, each of them, and the Length of the Seasons.

"	1st of Shaban	Month of Hope	Jan. 4, 1832.

Appearance of the Sun, at the apparent Conjunction of the Sun and Moon, in the Eclipse of the 12th of February, at Petersburg, Va., Cahawba, Siasconset, Halifax, and all other places where the Sun is centrally, or very nearly centrally, eclipsed.

Appearance of the Sun, at the greatest Obscuration, at Natchez, Nashville, Washington, Baltimore, Philadelphia, New York, New Haven, Hartford, Boston, New Bedford, Portsmouth, Portland, and all other places where the Sun will be about $11\frac{1}{2}$ digits eclipsed on his South Limb.

ECLIPSES OF THE SUN AND MOON IN 1831.

There will be two eclipses of the Sun, viz. on the 12th of February and 7th of August. The former will be annular, and the latter total.

There will be two eclipses of the Moon also, both partial; viz. on the 26th of February and 23d of August.

I. Annular eclipse of the Sun on Saturday, February 12th, visible throughout the United States.

[In the computation of this eclipse, Carlini's tables, corrected by the formulæ of Professor Bessel, were used for the Solar elements, and the tables of Damoiseau for the elements of the Moon. Damoiseau's tables were preferred to those of Burckhardt and Burg, not only from the circumstance that they are of later date, but because the *apparent* latitude of the Moon in this eclipse, deduced from these tables, is very nearly the mean of that deduced from the other two, as will be seen by turning to the phases of the eclipse at Nantucket, Halifax, and Boston; the difference, however, between them amounts to a very few seconds only, especially in the longitude. The elements of the eclipse, as given by these tables respectively, will be found in the Appendix to this part. They were computed twice with great care, for February 12th, 2d, 3d, 4th, 5th, 6th, 7th, and 8th hours, for the meridian of Paris, and thence interpolated for every quarter of an hour for the meridian of Greenwich.

The ellipticity of the Earth was considered one three-hundredth; according to which quantity the equatorial parallax of the Moon was invariably diminished, and the latitude of each place reduced.

In computing the paths of the different digits, and of the contact of the limbs, the augmentation of the Moon's diameter, on account of her altitude was taken into consideration. The diameter of the Sun was diminished 7'' for irradiation. The Moon's motion was not considered uniform throughout the eclipse, as is sometimes done, but her actual distance from the Sun in Right Ascension, and the difference of their declinations, were made use of in each computation.]

The Longitudes are reckoned from Greenwich.

The Longitude of Washington in time is 5h. 7m. 42s.

Phases of the General Eclipse.

The eclipse will first be visible in the North Pacific Ocean.

	Mean Time at Washington.			Mean Time at the place.			Latitude of the place.	Longitude of the place.
Beginning of the general eclipse, or eclipse first seen at sunrise	h.	m.	s.	h.	m.	s.	° ' ''	° ' ''
	9	42	4 M.	6	28	34 M.	14 9 N.	125 18 W.

Latest termination of the eclipse in the Atlantic Ocean, near the Western Islands.

End of the general e- clipse, or eclipse last seen at sunset	h.	m.	s.	h.	m.	s.	° ' ''	° ' ''
	2	44	53 A.	5	27	7 A.	40 16 N.	36 22 W.

Duration of the entire eclipse for the whole earth 5h. 2m. 49s.

Path of the Central Eclipse, that of the contact of the Limbs, and of several of the Digits.

[By the tables of Burckhardt, these paths will pass about 6 miles farther north, and by those of Burg, about 6 miles farther south.]

The Sun will not be eclipsed less than six digits, on his south limb, in any part of the Earth; but the path of six digits, on his south limb, will be almost exactly in contact with the Earth, at sunrise, at 0h. 15m. A. Mean Time at Washington, in Latitude 70° N., Longitude 124½° W.

Path of 9 Digits eclipsed on the South Limb.

Sun sets 11 dig. ec.	23 43	4 34 17	60 40.0	29 17.0	" " near Iceland.

Duration of this path on the Earth . . . 2h. 20m. 15s.

† On the meridian of the place.

This path begins in the North Pacific, passes across the province of Old California, the Gulf of California, Intendency of Sonora, and the province of New Mexico, in the *Republic of Mexico*; through the southeastern part of *Arkansas Territory* (passing near Little Rock), across the Counties of Shelby, Tipton, Haywood, Madison, Carroll, Humphries, Dickson, Montgomery, and Robertson, in the State of *Tennessee*; the Counties of Simpson, Warren, Barren, Greene, Washington, Mercer, Casey, Lincoln, Garrard, Madison, Clark, Montgomery, Bath, Fleming, Lawrence, and Greenup, in *Kentucky*; the Counties of Lawrence and Gallia, in *Ohio*; the Counties of Mason, Wood, Tyler, and Ohio, in *Virginia*; the Counties of Greene, Fayette, Westmoreland, Indiana, Cambria, Clearfield, Centre, Lycoming, Bradford, and Susquehannah, in *Pennsylvania*; the Counties of Broome, Chenango, Otsego, Schoharie, Montgomery, Saratoga, and Washington, in the State of *New York*; the Counties of Rutland, Windsor, and Orange, in *Vermont*; the Counties of Grafton and Coos, in *New Hampshire*; the Counties of Oxford, Somerset, Penobscot, and Washington, in *Maine*; the north part of *New Brunswick*; the Gulf of *St. Lawrence*; the east end of the island *Anticosti*; the northern extremity of *Newfoundland* to the Atlantic Ocean; and ends about 450 miles S. W. of Iceland.

Path of the Contact of the Southern Limbs, or Northern Limit of the Annular Eclipse.

This path, whilst on the Continent, will pass about 35 English miles northerly of the path of the Centre, and very nearly parallel thereto; where the Moon is near the horizon, the distance will be about 50 miles.

This path will begin in the North Pacific, and will pass across the provinces of Old California, Sonora, Durango, San Luis Potosi, and Texas, in *Mexico*; the County of Opelousas, and the Parishes of Avoyelles and Concordia, in *Louisiana*; the Counties of Wilkinson, Amite, Lawrence, and the south part of the Choctaw territory, in *Mississippi*; the Counties of Greene, Perry, Bibb, Shelby, and the territory of the Upper Creeks, in *Alabama*; the territory of the Cherokees, the Counties of Hall and Habersham, in *Georgia*; Pendleton district in *South Carolina*; the Counties of Haywood, Buncombe, Burke, Iredell, Rowan, Stokes, and Rockingham, in *North Carolina*; the Counties of Pittsylvania, Campbell, Charlotte, Prince Edward, Cumberland, Powhatan, Goochland, Hanover, Caroline, King and Queen, Essex, Richmond, and Westmoreland, in *Virginia*; across the Potomac, the County of St. Mary, Chesapeake Bay, and the Counties of Calvert and Dorchester, in *Maryland*; the Counties of Sussex and Kent in *Delaware*; across Delaware Bay and the Counties of Cape May and Gloucester, in *New Jersey*, into the Atlantic Ocean; thence across Duke's County and the County of Barnstable, in *Massachusetts*; thence into the Atlantic again, thence across the whole length of *Nova Scotia*, the islands of *Cape Breton* and *Newfoundland* into the Atlantic Ocean for the third time, and will end about 600 miles east of Greenland.

To the inhabitants of the portion of the earth comprehended between the two preceding paths, the Sun will appear to be eclipsed from 11 to 11½ digits on his south limb, the magnitude of the eclipse being greatest near the latter path. It will be observed, that a large part of the inhabited portion of the United States, and a still larger proportion of our principal cities, are contained in this space.

Path of the Central Eclipse for every Minute, from the Time of its coming upon the Continent, in California, till it leaves the Island of Newfoundland, and for every Fifth Minute during the Remainder of the Time of its Continuance upon the Earth.

Duration of this path			2h. 30m. 36s.		

This path begins in the North Pacific, passes across the island of Cerros, the province of Old California, the Gulf of California, the Intendency of Sonora, and the provinces of New Biscay, Bolson de Mapimi, Cohahuila, New Santander, and Texas, in *Mexico*, into the *United States*, crossing the river Sabine at the place of its entrance into the lake of the same name; thence over the County and near the town of Opelousas, the north-west corner of the parish of West Baton Rouge, the County of Point Coupee, and the parish of New Feliciana, in the State of *Louisiana*; across the Counties of Pike, Marion, Perry, Covington, and Wayne, in *Mississippi*; the Counties of Washington, Marengo, Wilcox, Dallas, Antauga, and the territory of the Upper Creek Indians, in *Alabama*; the territory of the Cherokee and Lower Creek Indians, and the Counties of Fayette, De Kalb, Gwinnett, Hall, Jackson (passing a little north of the town of Athens), Madison, Elbert, and the southeast corner of Franklin, in *Georgia*; the districts of Pendleton, Greenville, Spartanburgh, (passing a few miles southeast of the towns of the same name,) and York, in *South Carolina*; the Counties of Lincoln, Mecklenburg, Cabarras, Rowan, Randolph, Guildford, Orange, Caswell, and Person, in *North Carolina*; the Counties of Halifax, Mecklenburg, Lunenburg, Dinwiddie (passing very near Petersburg), Chesterfield, Charles City, New Kent, King William, King and Queen, Middlesex, Lancaster, and Northumberland, in *Virginia*; across the Chesapeake a little below the entrance of the Potomac, and the Counties of Somerset and Worcester, in *Maryland*; across the southeast corner of Baltimore Hundred, in the County of Sussex, in *Delaware*, into the Atlantic Ocean; thence to Cape Sable in Nova Scotia, passing within 6 miles of the southeast part of the island of Nantucket (where, however, by the tables of Burckhardt, the eclipse will be exactly central), across Nova Scotia, the island of Cape Breton, the entrance of the Gulf of St. Lawrence, and the island of Newfoundland into the Atlantic, where it ends about 550 miles E. S. E. of Greenland, and 500 miles southwest of Iceland.

The *apparent* velocity of the Moon, it will be observed, is quite unequal, being very great when she is near the horizon, then decreasing till the time of her *true* conjunction with the Sun in longitude, at which time her longitude is the same as that of the nonagesimal or of the zenith, and then increasing with an accelerated velocity till she comes to the horizon again, or till the time of the end of the central eclipse.

The Moon, at the time when the preceding path crosses the island of Cerros, *apparently* moves at the rate of about 45 miles per *minute*, but at the time of its entrance into the United States, in Louisiana, moves about 21 miles only per minute, which is nearly the least velocity; her velocity then begins, but very slowly, to increase, being in the State of Mississippi about the same; in Alabama about 23 miles; in Georgia about 24; in South and North Carolina about 25; in Virginia about 26; in Maryland and Delaware about 28; in crossing the Atlantic to the island of Nantucket about 33; off Nantucket about 35; in crossing the ocean to Cape Sable

about 38; in the southwest part of Nova Scotia about 41; in the northeast part of the same province 45; in crossing from Cape Breton to Newfoundland 51; and in crossing the latter island, about 64 miles per minute.

Neither will the distance of the Moon, nor her motion in her orbit, be uniform throughout the eclipse. At the beginning of the general eclipse the distance between the centres of the Earth and Moon will be 236,450, and at the end 235,940, English miles; and her hourly motion from the Sun, referred to the centre of the Earth at the same times, will be 2134 and 2140 miles.

Path of the Contact of the Northern Limbs, on the Southern Boundary of the Annular Eclipse.

This path will pass about 35 miles in a southerly direction from the path of the Centre, and very nearly parallel to it; but, where the Moon has but little altitude, the distance from the Central path will be about 50 miles.

This path begins in the North Pacific, crosses the province of Old California, the Gulf of California, the Intendency of Sonora, the provinces of Chiguagua, Bolson de Mapimi, Cohahuila, New Santander, and Texas, in Mexico; the Counties of Opelousas and Attakapas, the Parishes of West Baton Rouge, East Baton Rouge, St. Helena, and St. Tammany, in Louisiana; the Counties of Hancock, Jackson, and Greene, in Mississippi; the Counties of Mobile, Washington, Clarke, Monroe, Wilcox, Montgomery, Pike, and the Territory of the Upper Creek Indians, in Alabama; the Territory of the Lower Creeks, and the Counties of Pike, Henry, Jasper, Morgan, Greene, Washington, and Lincoln, in Georgia; the Districts of Abbeville, Laurens, Union, Chester, York, and Lancaster, in South Carolina; the Counties of Mecklenburg, Anson, Montgomery, Moore, Chatham, Wake, Franklin, Warren, Halifax, and Northampton, in North Carolina; the Counties of Greenville, Sussex, Surry, Warwick, and York, across the Chesapeake, and the Counties of Northampton and Accomack, in Virginia, where it leaves the Continent; thence across the Atlantic to the island of Newfoundland, across that island where it is narrowest (between Placentia and Trinity bays) into the Atlantic again, and ends near the termination of the path of the Centre, about 600 miles southeast of Greenland, and 550 southwest of Iceland.

The magnitude of the obscured part of the Sun will be very nearly the same throughout the space comprehended between the *three* preceding paths; but the appearance of the Sun at the nearest approach of the centres of the Sun and Moon will be very different. To the inhabitants of the country traversed by the *first* of the three, the *south* limbs of the Sun and Moon will appear exactly in contact. Approaching a little towards the *path of the centre*, a ring will be seen about the Sun; but of unequal width, being much wider on the northern than on the southern side. As we continue to advance, this inequality diminishes, the southern side of the ring becoming wider, and the northern contracting, until, on our arriving thereat, the ring becomes perfect, and of equal width round the Sun. Its duration is here the greatest, being (on the continent) about two minutes. If we proceed, still in a southerly direction, the ring will again become unequal, but the *north* side of it is now the narrower; the inequality continually increases as we proceed, until on arrival at the *last* of the preceding paths, the *north* limbs of the Sun and Moon will come into contact, and the ring be destroyed.

Not one of the *largest* cities of America is comprehended in the space between the contact of the north and south limbs, the width of this space

being only (while on the continent) *about* 70 English miles. In the republic of Mexico it does not appear, by our map, that the eclipse will be annular in any town of note.

The principal villages or towns at which the eclipse will probably be annular, are,

In LOUISIANA—Opelousas, St. Marion's, Point Coupee, Baton Rouge, and St. Francisville.

In MISSISSIPPI—Pinkneyville, Liberty, Holmesville, Monticello, and Winchester.

In ALABAMA—St. Stephens, Clarksville, Linden, Canton, Cahawba, Marions, Washington, and Montgomery.

In GEORGIA—Lawrenceville, Monroe, Madison, Gainesville, Jefferson, Athens, Lexington, Danielsville, and Carnesville.

In SOUTH CAROLINA—Pendleton, Abbeville, Greenville, Laurensville, Spantenburg, Union, and Yorkville.

In NORTH CAROLINA—Rutherfordton, Lincolnton, Charlotte, Statesville, Concord, Tindalsville, Blakeley, Lexington, Salem, Martinville, Pittsborough, Danbury, Hillsborough, Oxford, and Warrenton.

In VIRGINIA—Boydstown, Marysville, Nottoway, Hicksford, *Petersburg*, Scottsville, Blandford, *Richmond*, Williamsburg, York, Dunkirk, Rappahannock, Urbanna, Bridgetown, and Drummond.

In MARYLAND—Princess Ann and Snowhill.

In DELAWARE—Georgetown, Bridgetown, Milford, and Lewistown.

In NEW JERSEY—Cold Spring.

In MASSACHUSETTS—Chilmark, Edgartown, Harwich, Chatham, *Siasconset*, and *Nantucket*.

In NOVA SCOTIA—Shelburne, Liverpool, Lunenburg, *Halifax*, and *Pictou*.

In CAPE BRETON—Louisbourg.

* On the meridian of the place.

This path begins in the Pacific Ocean, crosses the province of Costa Rica in *Guatemala*, the Caribbean sea, the island of Hayti, into the Atlantic Ocean, where it ends a little east of the Western islands. Within the two preceding paths are included the south provinces of *Mexico*, the north provinces of *Guatemala*, the whole of Jamaica, nearly the whole of Cuba and Hayti, several of the Bermudas, and all the Western islands.

Within this space the Sun will be eclipsed from 9 to 6 digits on his north limb.

† On the meridian of the place.

This path begins in the Pacific, passes over the Gallipagos, and the provinces of Cundinamarca and Venezuela, of that country which is, or was recently, known by the name of the Republic of Colombia, thence across the Caribbean sea into the Atlantic Ocean.

Between the two preceding paths are included the southern provinces of *Guatemala*, the province of *Panamá*, the north part of Cundinamarca, and the northeast part of Venezuela, the southeast part of Hayti, and the islands Curaçoa, Buen Aire, Orchilla, Martinique, Dominica, Mariagalante, Guadaloupe, Montserrat, St. Kitts, Nevis, Barbuda, St. Eustatia, Saba, St. Barts, St. Martins, Anguilla, St. Croix, St. John's, St. Thomas, Virgin Gorda, Anegada, Porto Rico, and several others in the Caribbean sea.

The degree of obscuration within this space will be from 6 to 3 digits on the northern limb.

Duration of this path . 3h. 36m. 32s.

* Greatest South latitude. † On the meridian of the place.

This path, like all the rest, begins in the Pacific Ocean, passes across the north part of the province of Truxillo, in Peru; the provinces of Quito and Spanish Guiana, in Colombia; and the north extremity of Dutch Guiana into the Atlantic Ocean, where it ends a little north of the Cape Verd islands.

Between this and the preceding path are included the northern extremity of the province of Truxillo, the northwest half of the province of Quito, and the southern half of Cundinamarca, a large part of Venezuela, nearly the whole of Spanish Guiana, the northern extremity of Dutch Guiana, and the islands Trinidad, St. Lucia, St. Vincent, Barbadoes, Grenada, Tobago, Margarita, Blanca, Tortuga, and many others in the West Indies.

The degree of obscuration within this space will be from 3 to 0 digits on the northern limb; under the path of the contact of the limbs, and of course still farther south, the Sun will not be eclipsed.

PHASES OF THE ECLIPSE FOR SOME OF THE PRINCIPAL PLACES IN THE UNITED STATES

The eclipse was computed for the following places by the tables used for computing the path of the centre and that of the digits. For the sake of comparison, the phases at Halifax, Nantucket, and Boston, were likewise computed by the tables of Burckhardt, and for the last of these places, by the tables of Burg, which, however, are now but rarely used.

It will be observed that the several phases of the eclipse, at each place, have been computed for the semidiameters of the Sun and Moon, as given by the tables, and as corrected, for irradiation ($-3\frac{1}{2}''$), and inflexion ($-2''$), according to the theory of Dusejour. The existence of these corrections is extremely doubtful. Indeed, the correction of the Moon's S. D. for inflexion ($-2''$) has been altogether neglected in the computation of the occultations (although introduced into the computation of those of the last year), from the circumstance that in each of the occultations of Aldebaran, observed in Boston in 1829 and 1830, the star was eclipsed longer, by several seconds, than it should have been, if the correction had been well established.

The *apparent* places of the Sun and Moon were always computed with great care, even the latitude of the Sun being taken into consideration; yet it is not impossible that some small errors may have escaped notice; greater error, however, is to be apprehended from a wrong assumption of

the latitude and longitude of the place in question, although, in these particulars, we have followed the best authorities. Indeed it may be safely remarked, that the geographical positions of but very few places in the United States (especially the longitude), are well established. It is confidently hoped, that the highly favorable opportunity for determining the difference of the meridians of our principal cities, afforded by this remarkable eclipse, and the occultations of Jupiter, Saturn, Venus, Aldebaran, and Regulus, in the course of this year, will not be neglected.

The longitude and altitude of the Nonagesimal degree of the Ecliptic (in other words, the longitude and latitude of the Zenith) were computed by the method pointed out in the Appendix to the "New Amer. Prac. Navigator." As the position of this point depends on the reduced latitude of the place, the obliquity of the Ecliptic, and the Right Ascension of the Meridian, or of the Zenith, five of the logarithms used in the computation of this point, must be very nearly the same, at any place, for many years; being affected only by the very slow diminution of the obliquity. For the purpose of facilitating as much as possible the recomputation of the eclipse, at any place, should the same be deemed necessary, the sum of these logarithms, as well as the sum of the reductions of the Moon's Equatorial parallax for the ellipticity of the Earth (one three-hundredth), and the Horizontal parallax of the Sun, have been prefixed to the phases; the two first of the logarithms referring to the Longitude, and the third to the Altitude of the Nonagesimal.

The following places have been arranged with reference to the *apparent* Ecliptic conjunction of the Sun and Moon, which, in mean time for the meridian of Washington, will take place as follows, viz.—

II. Saturday, February 26th, the Moon eclipsed, invisible throughout the United States.

Beginning of the Eclipse	h. m.	10 20½ M.	} Mean Time at Washington.
Greatest Obscuration (8° 17' on the Southern Limb of the Moon)	}	11 48½		
End of the Eclipse	1 16½ A.		

At the above times the Moon will be in the Zenith of the following places, from which it will be very easy to determine where the Eclipse will be visible.

At Beginning in Long. 130° 46' East.	Latitude	9° 36' North.
Gr. Obs. " 109 27 "	"	9 22 "
End " 88. 8 "	"	9 8 "

The latter part of the Eclipse will be visible in Europe.

III. Sunday, August 7th, the Sun totally eclipsed, invisible throughout the United States and the Continent of America.

Beg. of the general Eclipse on the Earth at 2 39 A. M. T. at Wash'ton.
in Lat. 13° 45' S. Long. 201° 20' W.

Beg. of total darkness on the Earth at 3 48 A. Mean T. at Washington.
in Lat. 29° 9' S. Long. 213° 10' W.

Sun totally and centrally ec. on the meridian at 5 22 A. M. T. at Wash.
in Lat. 26° 36' S. Long. 156° 2' W.

End of total darkness on the Earth at 6 27 A. Mean T. at Washington.
in Lat. 50° 7' S. Long. 103° 9' W.

End of the general Eclipse on the Earth at 7 36 A. M. T. at Wash'ton.
in Lat. 35° 13' S. Long. 111° 39' W.

This Eclipse will be visible in the greater part of New Holland and in the South Pacific Ocean, excepting a portion very near the coast of South America. The greatest north latitude attained by the path of the northern boundary of the Eclipse will be 12° 39', on the meridian of 173° 6' W.

At the Astronomical Observatory in Paramatta, in New Holland, in Latitude 33° 48' 49.8" S., Longitude 151° 1' 34" E., the Sun will rise eclipsed.

The greatest obscuration (10½ digits) will take place at	h. m.	19 7½	} Mean Time at Paramatta.
The end of the Eclipse at	20 16½		

IV. Tuesday, August 23d, the Moon partially eclipsed; visible in part to the portion of the United States east of the Mississippi, and wholly visible to the portion, west thereof.

City of Boston, Long. 71° 4' 9'' W.

OCCULTATIONS IN 1831,

Visible in Boston, and in Other Parts of the United States; the Phases of which are expressed in Mean Time for the Meridian of Boston.

[Those marked with an asterisk will be visible in Europe.]

OCCULTATION OF A STAR BY A PLANET.

March 17th. Occultation of the Star α 18 by the Planet Mars.

1. The apparent Lat. and Long. of the star being deduced from the Tables of the Astronomical Society of London.

Immersion	.	.	6h. 32m. 20s. A.	1.56''	} North of the Centre of δ .
Emersion	.	.	6 35 4	1.53	

2. The place of the star being deduced from the Tables in the Appendix to Dr. Pearson's Practical Astronomy.

Immersion	.	.	6h. 33m. 57s. A.	0.31''	} South of the Centre.
Emersion	.	.	6 37 18	0.34	

S. D. of δ 2.59''; apparent motion of δ per minute in Long. 1.532'', in Lat. + 0.010''.

This will probably be an occultation throughout a very large part of the United States; but it is very doubtful whether it can be observed in any place much to the westward of Boston, on account of the proximity of the Sun to the horizon. It takes place, however, at a season of the year when the twilight is about the shortest, and at a time when the star has great altitude.

OCCULTATIONS OF STARS BY THE MOON IN 1831.

January 5th. Occultation of γ III .

Immersion	.	.	2h. 28m. 1s. M.	13' 45''	} North of the Centre of the Moon.

The importance of large eclipses of the Sun and of occultations of stars and planets by the Moon, for the determination of terrestrial longitude (the latitude being always easily ascertained), has long been known. When thus carefully determined, it will be as near to the truth as when deduced from a very large number of lunar distances, or of transits of the Moon and a star; but where the tables of the Moon are relied on, the longitude, even thus obtained, is still somewhat uncertain, on account of the small error which is sometimes found in them; if, however, it is deduced from a corresponding observation of the same eclipse or occultation made in one of the observatories of Europe, or in any other place, of which geographical position is well determined, it will be free from this as well as other sources of error, if the observations are correctly made in both places.

On another account, the subject of occultations has at all times been an interesting and important one, both to the practical and theoretical astronomer; viz. they frequently present some remarkable phenomena with respect to light, when the edge of the Moon comes in contact with the star, the star sometimes appearing to be *projected on the disc of the Moon*. This circumstance has lately been very particularly attended to, and numerous instances are given by members of the Astronomical Society of London, who suppose that this appearance is more frequent (or at least more frequently recorded) as to Aldebaran, than as to any other star, accompanied, however, with anomalies, for which it is difficult to account.*

It is therefore hoped that our astronomers will be induced to look out for the occultations of this star, not only with a view to ascertain the longitude of the place of observation, but to determine whether it does not appear projected on the face of the Moon; in doing this, particular attention should be paid to the following circumstances.

* See a paper read before the Astronomical Society of London, by Mr. South, their President, in the transactions of that Society in 1839; also remarks on the anomalies observed in the occultations of Aldebaran of August 21st, October 15th, and December 9th, same year.

1. Whether the star undergoes any change of light, of color, or of motion, on its immediate approach to the edge of the Moon.

2. Whether it appears to be projected on the Moon's disc, and if so, for how long a time.

3. Whether the dark limb of the Moon be distinctly visible, and well defined, at the time of the phenomenon.

4. Whether the star, on its emersion, appears on the Moon's disc, or emerges quite clear of the Moon's border.

Between August 1829 and July 1830 six occultations of this star were observed in Boston, and in each of them, when the Immersion or Emersion took place on the dark side of the Moon, it appeared to be instantaneous, and when on the enlightened side, the star usually became so tremulous, near the Moon's edge, as to cause an uncertainty of one or two seconds in the time of its taking place; but in two instances, viz. on the 28th of March last and 16th of July, the star did actually appear projected for the space of between one and two seconds on the lunar disc, or as if about to pass between the Moon and the Earth; its red color remained unchanged, but its light was very much more brilliant than usual.

It will be noticed, that the occultations of the planets and of the stars α 8 and α 9 (excepting that of α 8 on the 9th of June, or day of new Moon) which take place whilst the Sun is above the horizon, only have been computed; the occultations of the other stars have been neglected, as they will be rendered invisible by the light of the Sun.

In the computation of the occultations last year, the diameter of the Moon was reduced four seconds for inflexion, according to the theory of Dusejour; this year, this reduction has been altogether neglected.

The elements of the eclipses, in the Appendix, are given for *mean solar* time of the meridian of Greenwich, and of the occultations, in *mean solar* of that of Berlin, which is 0h. 53m. 33.6s. East of Greenwich, or 6h. 1m. 15.6s. East of Washington. When it is desired to convert mean into apparent time, the equation, in these elements, must be applied with the sign prefixed to it; but when apparent is to be converted into mean, the sign must be reversed.

No sign is prefixed to the hourly motion of the Moon in Longitude, of the Sun in Longitude or Right Ascension (A. R.), or of Sidereal time, as it is always +.

For the accurate calculation of the time of the phases of a solar eclipse or occultation, at any place, the latitude of the place, and the equatorial parallax of the Moon, must be diminished for the ellipticity, or flattening at the poles, of the Earth; which, though not precisely determined, is generally supposed to be about one three-hundredth; the reductions for this quantity will be found in the 38th table of the sixth stereotype edition of the "New American Practical Navigator," or they may be computed by the following formulæ.

Let L be the latitude and R the reduction to the geocentric latitude, then $\log. \cotang. (L-R) = 0.0029001 + \log. \cotang. L$.

The reduction of equatorial parallax (57' for example) may be found thus, $5.7'' - 5.7'' \cos. 2 L$.

The reduction of the latitude is nothing at the Equator and the Poles, and greatest in latitude 45° , where it is $-11' 28.7''$.

The reduction of the parallax is also nothing at the Equator, but greatest at the Poles, where it is one three-hundredth of the whole parallax; in Lat. 45° it is half that quantity.

The elements of the eclipses, with the exception of that of February 12th, and of the occultations, with the exception of the places of the stars, were computed from the Berlin *Astronomisches Jahrbuch* (Astronomical Year

Book) for 1831, edited by the celebrated Encke, a work far superior, both as to matter and arrangement, to any thing of the kind hitherto published.

The places of all the stars, but α 8 and α 9, were computed from Mr. Baily's Catalogue of Zodaical Stars, which was taken from the Catalogue recently published by the Astronomical Society of London, and were also carefully compared with their places in the Catalogue in the Appendix to the first volume of Dr. Pearson's Practical Astronomy. The longitude and latitude of Aldebaran and Regulus are the mean of the determinations at the astronomical observatories of Greenwich and Königsberg.

Prof. Bessel's determination of the Obliquity of the Ecliptic, and the correction of the mean place of the Sun and Stars for the Aberration of Light and Nutation of the Earth's axis, have been invariably used.

The aberration of the planets was calculated by the formulæ in Vol. III, p. 106, of Delambre's Astronomy.

ECLIPSES OF THE SATELLITES OF JUPITER IN 1831,

Visible throughout, or in some part of, the United States; the Phases of which are expressed in Mean Solar Time for the Meridian of Washington, reckoned according to the manner of Astronomers; who begin the Day at the Noon of the Civil Day, and count the Hours up to 24, or to the succeeding Noon, when another Day is commenced.

The eclipses before the opposition of Jupiter on the 10th of August will take place on the west side of the planet, and afterwards on the east. The Immersions only, of the first and second Satellites, will be visible before the opposition, and the Emersions only, afterwards; but both the phenomena of the same eclipse of the two outer Satellites can sometimes be seen.

The eclipses take place farthest from the body of Jupiter when he is in quadrature, and nearest when in opposition or conjunction; but for some weeks before and after he is in the latter position, the eclipses cannot be observed, the Planet and his Satellites being rendered invisible by the light of the Sun.

Eclipses of these Satellites, of the first and second especially, are very useful for determining to a very considerable degree of accuracy the longitude of any place; which, although not so exact as that obtained by an observed occultation of a star by the Moon, is deduced without the long and fatiguing calculation necessary for obtaining it by the latter method. They have likewise the additional advantage of being of very frequent occurrence. Until very recently, it was generally supposed, that these eclipses could not be observed at sea on account of the motion of the vessel; but an officer in the English Navy has lately shown this opinion to be erroneous; he having succeeded in observing their phenomena from a ship, with a very considerable degree of accuracy.

To determine the time at which either of the preceding eclipses will take place, on any other meridian than that of Washington, it is merely necessary to add four minutes for every degree of longitude less than $76^{\circ} 55' 30''$,

and subtract the same quantity for every degree greater, and in proportion for a part of a degree.

For Boston, add 23m. 25s.; for New York, 11m. 38s. For Charleston, subtract 11m. 30s.; for Cincinnati, 29m. 46s.; for New Orleans, 52m. 54s.

Position and Magnitude of the Rings of Saturn, according to Bessel and Struve, for every Fortieth Day in the Year.

January	1	— 6° 35'	— 8° 45'	44.69''	— 6.80''
February	9	— 6 46	— 10 0	46.44	— 8.06
March	21	— 6 56	— 11 23	45.61	— 9.00
April	30	— 7 0	— 11 50	42.69	— 8.80
June	9	— 6 54	— 11 8	39.97	— 7.66
July	19	— 6 40	— 9 18	37.96	— 6.14
August	28	— 6 19	— 7 8	37.24	— 4.57
October	7	— 5 57	— 4 49	37.93	— 3.19
November	16	— 5 39	— 3 11	39.95	— 2.22
December	26	— 5 32	— 2 41	42.86	— 2.00
		<i>p.</i>	<i>l.</i>	<i>a.</i>	<i>b.</i>

p. Angle between the semiconjugate axis of the ring ellipse, with the circle of declination; positive when east, negative when west.

l. Angle of elevation of the earth above the plane of the rings, as seen from Saturn, positive when north, negative when south.

a. Semitransverse axis of the ring ellipse.

b. Semiconjugate axis; positive, when the northern surface of the rings is visible; negative, when the southern.

It has been recently ascertained, that Saturn is not placed exactly in the centre of the rings. This singular circumstance was first perceived by M. Schwalz, of Dessau; but for some time was considered an optical illusion, occasioned by the shadow of the planet upon the ring. The question was settled by Prof. Struve, with the celebrated telescope by Fraunhofer, at Dorpat; who ascertained that the rings are actually eccentric. This eccentricity cannot, however, be perceived but by the assistance of the very best telescopes.

The planet Mercury will set after the Sun until the 27th of January, then rise before him until the 5th of April, then set after him until the 25th of May, then rise before him until the 20th of July, then set after him until the 25th of September, then rise before him until the 13th of November, then set after him to the 11th of January, 1832.

This planet cannot be easily seen in any other position than when at, or very near, its greatest elongation from the Sun, or when *apparently passing over the Sun's disc*, a phenomenon of rare occurrence, but which will actually take place on the 5th of May, 1832. The elongations take place, this year, January 10th (elong. 18° 55'), February 20th (el. 26° 40'), May 3d (el. 21° 3'), June 20th (el. 22° 37'), August 31st (el. 27° 11'), October 12th (el. 18° 5'), December 25th (el. 19° 48'); but, in the present year, the following periods will be the most favorable, in the United States, for observing the planet, as during them it will not only be at or near its greatest apparent distance from the Sun, but will be nearer the elevated pole, and consequently will remain longer above the horizon.

Jan. 1st to Jan. 19th, in the evening after sunset, bearing W. 20° S.

April 22d to May 16th, " " " " " W. 24 N.

Oct. 4th to Oct. 25th, " morning bef. sunrise, " E. 1 S.
Dec. 22d to Dec. 31st, " evening after sunset, " W. 23 S.

Venus will set after the Sun until the 8th of October, then rise before him until the 28th of July, 1832. Its greatest *eastern* elongation (elong. $45^{\circ} 43'$) will take place on the 30th of July, and its greatest *western* ($46^{\circ} 55'$) on the 19th of December; but it will be brightest as *evening* star on the 20th of August, and as *morning* star on the 30th of November, about which times the planet can be readily seen whilst the Sun is above the horizon.

Mars will set after the Sun until the 24th of September, then rise before him until November 20th, 1832.

Vesta will set after the Sun until the 1st of June, then rise before him during the remainder of the year.

Pallas will rise before the Sun until the 17th of July, then set after him through the year.

Juno will set after the Sun until the 1st of June, then rise before him through the year.

Ceres will rise before the Sun until the 9th of August, then set after him through the year.

Jupiter will set after the Sun until the 20th of January, then rise before him until the 10th of August, then set after him until February 24th, 1832.

Saturn will rise before the Sun until the 17th of February, then set after him until the 29th of August, then rise before him until March 2d, 1832.

Uranus will set after the Sun until the 30th of January, then rise before him until the 5th of August, then set after him until February 4th, 1832.

On the 21st of March this planet and Jupiter will come into conjunction; at which time their distance will be very small, Uranus being $6\frac{1}{2}'$ South of λ . A conjunction of Jupiter and Uranus is a phenomenon of rare occurrence, happening only once in about fourteen years.

The inferior planets, or all but Mercury and Venus, will appear brightest when nearest to the earth, that is, when in opposition to the Sun.

The oppositions in 1831 will take place as follows, viz. of Saturn, Feb. 17th; of Pallas, July 22d; of Ceres, Aug. 4th; of Uranus, Aug. 5th; of Jupiter, Aug. 10th; but Mars, Vesta, and Juno will not be in opposition this year.

HEIGHT OF THE GREATEST OR SPRING TIDES IN 1831,

The unit of altitude, is the altitude of the tide which happens about a day and a half after the time of New or Full Moon, the Sun and Moon being, at the moment of \odot or \oslash , at their mean distance from the Earth, and in the plane of the equator.

The unit of altitude of any place, multiplied by the quantities in the above table, will give the height of the spring tides at that place, in the present year.

The unit of altitude at *Boston*, *Salem*, *Marblehead*, *Cape Ann*, and *Plymouth*, is $11\frac{1}{2}$ feet :

At *New York*, *St. Augustine*, *Block Island*, *Elizabeth Town Point*, *Florida Keys*, *Elizabeth Islands*, *Hillsborough Inlet*, *Nantucket Shoals* and *Town*, *Buzzard's Bay*, *Martha's Vineyard*, *Long Island Sound*, *Rhode Island*, and *Sandy Hook*, 5 feet :

At *Charleston*, *S. C.*, *Monomoy Point*, *Port Hood*, *Prince Edward's Islands*, *St. Simon's Bar*, and *St. Simon's Sound*, 6 feet.

These, multiplied by the preceding numbers, give for the height of the greatest tides, this year, in those places.

By the preceding Table it appears, that the tides of March 15th, April 13th, May 13th, September 23d, October 22d, November 20th, and December 20th, will be the most considerable in 1831. The height of the tides, however, depends so much on the strength and direction of the wind, that it not unfrequently happens that a tide, which would independently of this have been small, is higher than one otherwise much greater. But when it happens that a tide, which arrives when the Sun and Moon are in a favorable position for producing a great elevation of the sea, is still further increased by a very strong wind, the rise of the water will be uncommonly great, and injury and loss probably thereby occasioned. A remarkable instance of this occurred in Boston and generally along the coast of New England, on the 26th of March last, when the tide, in itself one of the three highest in the year, being further elevated by a violent easterly gale, actually rose 16 feet 5 inches, and caused very considerable damage. This tide was the greatest observed in that city within the last 45 years.

The following Table contains the unit of altitude of several ports and places on the American coast, from the best authorities.

The height of the tides in the Bay of Fundy was ascertained by recent observations.

TIDE TABLE.

The following Table contains the difference between the time of high water at Boston, and at a large number of places on the American coast, from which the time at any of them may be easily ascertained, by *subtracting* the difference at the place in question from the time at Boston, when the the sign — is prefixed to it, and by *adding* it, when the sign is +.

The time of high water, in the calendar pages, is of that tide immediately *preceding* the southing of the moon.

Moon's Apogee and Perigee.

Apogee, Jan. 8th, 4h. M.—Dist. 251,500 ms.

Perigee, " 24 2 M. " 228,500 "

Moon's Last Quarter, 5th day, 5h. 52.6m. A.
New Moon, 13th " 8 38.3 A.

USEFUL REMARKS.

A maxim is sometimes like the seed of a plant, which the soil it is thrown into must expand into leaves, and flowers, and fruit; so that great part of it must sometimes be *written*, as it were, by the reader.

No man was ever so much deceived by another as by himself.

Very nice scruples are sometimes the effect of a great mind, but oftener of a little one.

True delicacy, as true generosity, is more wounded by an offence *from* itself, if the expression may be allowed, than *to* itself.

First Quarter, 21st day, 2h. 33.0m. M.
Full Moon, 27th " 9 38.0 A.

Sun rises and sets. Apparent time.

USEFUL REMARKS.

Nothing abridges life like false steps, idle words, and vain thoughts.—Chinese.
Some men talk sensibly and act foolishly, some talk foolishly and act sensibly; the first laugh at the last, the last cheat the first.

We are never so ready to praise, as when we are inclined to detract; and often has one man, nay one nation, been flattered by the commendations of a writer, who really meant no more than to fix a stronger censure upon another.

Some men are like certain stuffs, beautiful on one side, hideous on the other.

USEFUL REMARKS.

Pleasure is a game for which it will be in vain to try; it must start before you, or you'll never find.

Nothing so difficult as tracing effects into causes; nothing so quick as the invention of causes for effects.

Study profiteth little, if it does not teach us to avoid disputation.—*Chinese.*

Every character is in some respects uniform, and in others inconsistent; and it is only by the study of both, and a comparison of them with each other, that the knowledge of man is acquired.

Human knowledge is the parent of doubt.

 Oc. of ☿ 8. ☿ 21 ♀, 1 ♀, 1 ♀, 1 ♀.
 ☿ 943 Mayer, 3 h and 4 h m.
 5th Sund. in Lent. Essex taken, 1814.
 ☿ 21 ♀. ☿ enters ☿. Spring begins.
 ☿ 21 ♀. Newton died, 1727.
 Hornet captured the Penguin, 1815.
 ☿ 21 ♀. ☿ 21 ♀. Q. Eliz. d. 1603.
 ☿ 21 ♀. ☿ 21 ♀. ☿ 21 ♀. ☿ 21 ♀.
 ☿ 21 ♀. N. B. ret. to Paris, 1815.
 ☿ 21 ♀. 6th S. in Lent. Palm S.
 ☿ 21 ♀. ☿ 21 ♀. ☿ 21 ♀. ☿ 21 ♀.
 Gus. 3d assass. by Ankerstroem, 1792.
 Cath. emanc. bill p. H. Comm's, 1829.
 Occultation of ☿ 21 ♀.

Twilight begins and ends. Apparent time.					USEFUL REMARKS.	
1st day.	9th day.	17th day.	25th day.			
h. m. h.	h. m. h.	h. m. h.	h. m. h.		The great fault of the human understanding, is not the not going well, but the not stopping well.	
Boston, 4 3 8	3 49 9	3 35 9	3 21 9		The sense to conduct sense is worth every other part of it; for great abilities are more frequently possessed, than properly applied.	
N. York, 7	54	41	28		It is a melancholy consideration, that the difficulty of gaining reputation or riches should be great in proportion to the want of them.	
Wash. 11	58	46	35		People seldom speak ill of themselves, but when they have a good chance of being contradicted.	
Charles. 21	4 11 8	4 9 8	53

USEFUL REMARKS.

A man must be a fool indeed, if I think him one at the time he is applauding me.

The oak, which is generally considered as the king of trees, is that also which arrives latest at perfection; and perhaps, in some sense, the same observation may be true with respect to mankind.

The use of conversation is the perceiving, perhaps adopting, the ideas of others; the end, the displaying our own.

Who is the true hero? He who has the most courage in resisting himself.—*Chinese.*

We confess our faults in the plural, and deny them in the singular.

First Quarter, 18th day, 11h. 1.0m. M.

Moon's Perigee and Apogee.

Perigee, 9th day, 1h. A.—Dist. 225,900 ms.
Apogee, 22d " 2 A. " 252,100 "

Moon's Last Quar. 3d day, 10h. 10.1m. M.
New Moon, 10th " 1 42.5 M.

USEFUL REMARKS.

The general harmony of the physical world is maintained by a particular quality in each body, by which it attracts every thing to its own centre; it is exactly the same in the moral.

Virtue pleases more as nature than as virtue; but let it be added, that virtue is the first beauty of nature.

A fool has often the contrivance of the man of sense, and a man of sense the prejudice of the fool.

We are often governed by people not only weaker than ourselves, but even whom we think so.

First Quarter, 16th day, 10h. 52.1m. A.

USEFUL REMARKS.

We should ask those who are well, how we ought to die; and those who are dying, how we ought to live.—*Chinese.*

What nice distinctions are to be made in the characters of mankind! contempt for money and profusion have the same line of separation between them that virtue and vice have.

Some men are seldom out of humor, because they are seldom in humor.

The desire to please often frustrates itself; but in this case the desire to please will generally be found to proceed rather from a selfish than a social motive.

USEFUL REMARKS.

Some men mistake talking about sense, for talking sense.

Complaint against fortune, is often a masked apology for indolence.

Disagreeable qualities are often heightened by restraint, as the power of a spring is increased by drawing it back.

As love will often make a wise man act like a fool, so will interest often make a fool act like a wise man.

We see many minds which are, if we may be allowed the figure, well seated, but we see hardly any that have any elbow-room.

USEFUL REMARKS.

We need wisdom most, when we deal with those who have least.—*Chinese.*

There are few men but have more cunning than we suspect them of, and less than they suspect them selves of.

We are oftener deceived by being told some truth than no truth.

There are faults which, as they become greater, displease less.

Every man loves virtue better than vice; but then he loves himself better than either, and in his own way.

A proud man never shows his pride so much as when he is civil.

Apogee, 8th day, 3h. M.—Dist. 252,300 ms.

Perigee, 30th " 0 A. " 222,400 "

New Moon, 4th day, 8h. 14m. M.

First Quarter, 12th " 1 22.3 A.

USEFUL REMARKS.

No two things can be so contradictory, so much at variance, as truth and falsehood, and yet none are so mixed and united.

The great reason why false virtues pass so well in the world is, that true ones are so seldom near to compare them with.

Some men have just sense enough to prove their want of it.

The merriest people are not always those whose hearts are most susceptible of joy.

They that seldom take pleasure, seldom give pleasure.

Full Moon, 19th day, 1h. 35.3m. A.

Moon's Apogee and Perigee.

Apogee, 5th day, 0h. A.—Dist. 252,600 ms.
 Perigee, 19th " 0 M. " 221,500 "

USEFUL REMARKS.

We often see characters in the world, which we should call ridiculously extravagant in a book.

Unjust accusations seldom affect us much, but from having some justice in them.

People oftener want something to be taken away to make them agreeable, than something to be added.

There is among friends a neglect that is flattering, and an attention that is mortifying.

Uncommon forwardness oftener proceeds from ignorance than impudence.

ECLIPSES OF THE SUN.

FROM 1822 TO 1900.

A Catalogue of all the Eclipses of the Sun, between 1822 and 1900, Visible in the City of Boston, in Lat. $42^{\circ} 20' 58''$ North, and Long. $71^{\circ} 4' 9''$ West from Greenwich, in Mean Time for the Meridian of Boston, reckoned Astronomically.

This catalogue was carefully calculated, in the years 1822 and 1823, by the editor of this part of the Almanac; but as the lunar tables used are not now considered the most accurate, the phases of the eclipses are to be considered near approximations only; excepting, however, the eclipses of 1824, '25, '32, '54, and '75, which have since been recomputed.

The Semidiameters of the Sun and Moon were diminished according to the theory of Duséjour.

[Those marked with an asterisk will probably be visible in some part of Europe.]

1824. June 26th.

Beginning	7h. 27m. 3s.
Sun sat eclipsed	7 36

Digits eclipsed at Sunset $1^{\circ} 8'$.

The beginning of this eclipse was observed from a hill in the vicinity of Boston, at 7h. 27m. 18s.

This eclipse was the first return of the eclipse of June 16th, 1806, when the Sun was totally obscured at Boston, about five minutes.

1825. December 9th.

Beginning	3h. 53m. 13s.
Sun sat eclipsed	4 23

Digits eclipsed at Sunset $4^{\circ} 50'$.

A very small cloud passed over the Sun exactly at the time of the beginning of the eclipse, and prevented the same from being observed; but at 35 seconds after the computed time of the beginning, the part eclipsed was very perceptible.

This eclipse was total in the south extremity of Florida.

1831. February 11th & 12th.

See pages 5—26.

*1832. July 26th.

Beginning	19h. 16m. 46s.
Apparent \odot	19 59 8
Greatest Obscuration	20 6 34
End	21 0 6

Digits eclipsed $4^{\circ} 49'$ on Sun's South Limb.

In the city of St. Jago, in the S. E. extremity of Cuba, in Lat. $19^{\circ} 57' N.$ Long. $76^{\circ} 5' W.$, the eclipse will be *total*, and very nearly central.

Beginning of Total Darkness	19h. 20m. 33s.	} Mean Time at St. Jago.
Nearest Approach of Centres	19 22 41	
End of Total Darkness	19 24 48	

At nearest approach of centres	{ Distance of North Limbs	58.45"
	{ " Centres	6.89
	{ " South Limbs	72.23

The city of Kingston in Jamaica, in Lat. $18^{\circ} 1' N.$, Long. $76^{\circ} 51' W.$, is situate south of the southern boundary of the total eclipse. The Ap. \odot at Kingston (M. T. at K.) will take place at 19h. 18m. 43s.

Greatest Obscuration ($11^{\circ} 44'$ on Sun's North Limb) 19 18 15

The path of the southern boundary of the total eclipse will probably pass over the N. W. extremity of Jamaica, near Montego Bay.

At the southern extremity of the United States, the obscuration will be about eleven digits, on the South Limb.

This eclipse, taking place at a time when the Sun is nearly at his greatest possible distance, and the Moon at nearly her least possible distance, from the Earth, the width of the Moon's shadow on the Earth will be much greater than usual; so that where the sun is centrally eclipsed near the horizon and the zenith (in Africa), the duration of total darkness will rather exceed six minutes.

A fuller account of this eclipse will be given in our Almanac for 1832.

1834. November 30th.

Beginning	1h. 21m. 58s.
Greatest Obscuration	2 41 10
Apparent \odot	2 41 59
End	3 54 11

Digits eclipsed $10^{\circ} 31'$ on Sun's South Limb.

The Sun will be *totally* eclipsed in South Carolina and Georgia.

*1836. May 14th.

Beginning	19h. 25m. 29s.
Apparent \odot	20 30 31
Greatest Obscuration	20 38 14
End	21 59 54

Digits eclipsed $8^{\circ} 7'$ on Sun's South Limb.

This eclipse will be annular in the West Indies, in the north part of England and Ireland, in the south part of Scotland, and the north part of Germany and Denmark.

1838. September 18th.

Beginning	3h. 27m. 04s.
Greatest Obscuration	4 44 55
Apparent \odot	4 45 35
End	5 55 27

Digits eclipsed $10^{\circ} 52'$ on Sun's South Limb; at the greatest obscuration, Moon's Lower Limb, $38''$ South.

This eclipse will be nearly central at Washington, where the ring will last about six minutes. The Sun will be annularly eclipsed in three fifths of the States of the Union, the Moon at the time of the eclipse being at her greatest possible distance from the Earth.

1844. December 9th.

Beginning	3h. 45m. 33s.
Greatest Obscuration	4 19 49
Sun sets eclipsed	4 23

Digits eclipsed at Sunset $2^{\circ} 6'$; at Greatest Obscuration $2^{\circ} 9'$ on Sun's North Limb. The Sun will not be eclipsed in the Southern States, or centrally in any place.

*1845. May 5th.

Sun rises eclipsed	16h. 55m. 0s.
End of the eclipse	17 18 10

Digits eclipsed at sunrise $4^{\circ} 26'$.

This is the third return of the eclipse of April 2d, 1791, which was annular in Boston.

*1846. April 24th & 25th.

Beginning	24th, 23h. 14m. 36s.
Apparent \odot	25th, 0 33 31
Greatest Obscuration	0 34 5
End	1 52 10

Digits eclipsed $6^{\circ} 43'$ on Sun's South Limb.

The eclipse will probably be total in the island of Jamaica

*1848. March 4th.

Beginning	19h. 49m. 31s.
Apparent \odot	19 56 23
Greatest Obscuration	20 0 27
End	20 12 45

Part eclipsed $0^{\circ} 10\frac{1}{2}'$ on Sun's North Limb.

The Sun will not be eclipsed, in any part of the United States south of Connecticut, or centrally in any part of the Earth.

*1851. July 27th.

Beginning	19h. 48m. 24s.
Greatest Obscuration	20 38 44

Apparent \odot	20h. 45m. 51s.
End	21 30 18
Digits eclipsed $3^{\circ} 42'$ on Sun's North Limb.	

1854. May 26th.

Beginning of the Eclipse	4h. 26m. 27s.
<i>Formation of the Ring</i>	5 40 27
Apparent \odot	5 40 52
Nearest Approach of Centres	5 40 55
<i>Rupture of the Ring</i>	5 41 26
End of the Eclipse	6 46 49

Digits eclipsed $11^{\circ} 20'$. \odot 's Ap. Lat. at Nearest Ap. $50''$ North.

This Eclipse will probably be annular in Boston, and in some part of New York, Vermont, Massachusetts, New Hampshire, and Maine.

*1858. March 14th.

Sun rises eclipsed	18h. 14m. 0s.
Apparent \odot	18 43 27
Greatest Obscuration	18 46 42
End	19 48 37

Digits eclipsed at Sunrise $1^{\circ} 39'$; at Greatest Obs. $5^{\circ} 31'$ on Sun's South Limb.

1859. July 29th.

Beginning	5h. 32m. 8s.
Apparent \odot	5 56 31
Greatest Obscuration	6 4 0
End	6 35 53

Digits eclipsed $2^{\circ} 34'$ on Sun's North Limb.

The eclipse will not extend to the Southern States, and will not be central in any place.

*1860. July 17th.

Beginning	19h. 22m. 46s.
Apparent \odot	20 21 21
Greatest Obscuration	20 22 36
End	21 28 40

Digits eclipsed $6^{\circ} 12'$ on Sun's North Limb.

This is the third return of the total eclipse of June 16th, 1896.

*1861. December 30th.

Sun rises eclipsed	19h. 30m. 0s.
Greatest Obscuration	20 8 56
Apparent \odot	20 9 0
End	21 6 32

Digits eclipsed at Sunrise $1^{\circ} 51'$; at Greatest Obscuration $4^{\circ} 22'$ on Sun's South Limb.

*1865. October 18th and 19th.

Beginning	18th, 21h. 9m. 55s.
Greatest Obscuration	" 22 44 58
Apparent \odot	" 22 46 4
End	19th, 0 25 7

Digits eclipsed $8^{\circ} 18'$ on Sun's South Limb.

This eclipse will be annular in the States of North and South Carolina ; at Charleston the ring will last $6\frac{1}{2}$ minutes.

This is the third return of the Eclipse of September, 1811, which was annular in Virginia.

*1866. October 7th and 8th.

Beginning	7th, 23h. 11m. 38s.
Apparent \odot	" 23 33 50
Greatest Obscuration	" 23 41 25
End	8th, 0 10 34

Part eclipsed $0^{\circ} 31'$ on Sun's North Limb.

South of Connecticut there will be no eclipse, and no central eclipse in any part of the Earth.

1869. August 7th.

Beginning	5h. 21m. 17s.
Apparent \odot	6 16 7
Greatest Obscuration	6 16 40
End	7 7 28

Digits eclipsed $10^{\circ} 14'$ on Sun's South Limb.

This eclipse will be total in North Carolina and Virginia.

*1873. May 25th.

The Sun and Moon will be in contact at Sunrise ; but the Sun will be eclipsed to places at a greater distance from the Equator, and in less longitude from Greenwich.

*1875. September 28th.

Sun rises eclipsed	17h. 56m. 0s.
<i>Formation of the Ring</i>	18 20 21
Apparent \odot	18 21 28
Nearest Approach of Centres	18 21 37
<i>Rupture of the Ring</i>	18 22 52
End of the Eclipse	19 30 43

Ap. Lat. of the Moon at N. Ap. $29'$ North.

Digits eclipsed at Sunrise $7^{\circ} 14'$ at N. Ap. $11^{\circ} 25'$

This eclipse will be annular in Boston and in some part of Maine, New Hampshire, Massachusetts, and Vermont.

1876. March 25th.

Beginning	4h. 11m. 29s.
Greatest Obscuration	5 2 39
Apparent \odot	5 7 42
End	5 48 24

Digits eclipsed $3^{\circ} 37'$ on Sun's North Limb.

1878. July 29th.

Beginning	4h. 56m. 10s.
Greatest Obscuration	5 50 1
Apparent \odot	5 53 57
End	6 39 8

Digits eclipsed $7^{\circ} 23'$ on Sun's South Limb.

This eclipse will not be total in any part of the United States, but probably will be so, in the island of Cuba.

This is the fourth return of the total eclipse of June 16th, 1806.

*1880. December 30th.

Sun rises eclipsed	19h. 30m. 0s.
Greatest Obscuration	20 12 50
Apparent \odot	20 12 59
End	21 11 37

Digits eclipsed at Sunrise $2^{\circ} 46'$; at Greatest Obscuration $5^{\circ} 29'$ on Sun's North Limb. This eclipse cannot be central in any place.

At the time of this eclipse the Sun and Moon are very nearly at their least possible distance from the Earth.

1885. March 16th.

Beginning	0h. 35m. 0s.
Greatest Obscuration	1 55 55
Apparent \odot	1 57 22
End	3 10 49

Digits eclipsed $6^{\circ} 27'$ on Sun's North Limb.

*1886. August 28th.

Beginning	18h. 30m. 22s.
Apparent \odot	18 33 15
Greatest Obscuration	18 40 1
End	18 51 52

Part eclipsed $0^{\circ} 18'$ on Sun's South Limb.

North of Massachusetts there will be no eclipse.

1892. October 20th.

Beginning	0h. 18m. 39s.
Apparent \odot	1 45 11
Greatest Obscuration	1 51 8
End	3 20 8

Digits eclipsed $8^{\circ} 11'$ on Sun's North Limb.

The Sun will probably be centrally eclipsed in the Canadas and Labrador.

*1897. July 28th.

Beginning	21h. 7m. 35s.
Greatest Obscuration	22 15 35
Apparent \odot	23 24 56
End	23 28 59

Digits eclipsed $4^{\circ} 26'$ on Sun's South Limb.

*1900. May 27th.

Beginning	20h. 8m. 41s.
Apparent \odot	21 22 50
Greatest Obscuration	21 23 6
End	22 45 32

Digits eclipsed $11^{\circ} 1'$ on Sun's South Limb.

The Sun will be totally eclipsed in the State of Virginia.

It is supposed that the only similar Catalogue now extant is the one computed for Paris, from the old lunar tables of Mayer, by M. Vaucel, at the request of Louis XV, and published in the fifth Vol. of the "*Mémoires de Mathématique et de Physique*. Paris, 1768."

Vaucel's Catalogue commences with 1767, and ends with 1900. By this it appears, that the only eclipse nearly central at Paris, in all this term of years, is the annular eclipse of Oct. 9th, 1847, which is also the only one of the magnitude of eleven digits. But in Boston, between 1791 and 1900, seven of this magnitude take place, three of which are annular, one total, and two annular within the distance of eighty English miles.

The following are the solar eclipses at Paris, according to M. Vaucel, in the remainder of the present century.

1832, July 27,	Obscuration, $0^{\circ} 45'$	1868, Feb. 23,	Obscuration, $0^{\circ} 9'$

II. METEOROLOGICAL AND GEOLOGICAL INFORMATION.

1. NATURAL HISTORY OF THE WEATHER.

[From the Companion to the British Almanac for 1830.]

Are you *weather-wise*? is a question often anxiously asked, when all the appointments and arrangements for the out-door happiness of a large party have been made, and every desirable object anticipated or secured, except the certainty of fine weather, or even a continuation of it, if it already exist. The tone of the answers to this important query is in general expressive of hope of what it might, rather than of confidence as to what it will, be. The same desire of information and the same uncertainty prevail in the deliberations upon the more important and extensive operations of man, wherever the action of the atmospheric agents may assist or interfere; so that the cunning cheat, who could make a parade of abstruse learning sufficient to mystify the uninformed, has, for centuries, found the sale of predictions as to the state of the weather, an abundant source of profit. "Quackery," to use the recent language of M. Bory de St. Vincent, "has too long abused the public credulity upon this subject; for it must be acknowledged, that these phenomena are connected with a train of agencies, whose very existence we can never appreciate, and whose powers are beyond our means of calculation." Still, by the light which has been thrown upon the operations of this part of nature by the philosophers of our own times, we can safely take some steps towards an acquaintance with those atmospheric changes which directly or indirectly affect all vegetable and animal life, and more particularly with the order in which they succeed each other. Provided with this knowledge, we may often be able to anticipate them, and timely prepare either to avert or diminish their injurious influence, or take the greatest advantage of opportunities which may be propitious to the increase of the subsistence, wealth, and happiness of the community.

In the attempt to form a correct notion of the causes which produce those incessant variations in the atmosphere, which are popularly called

the weather, it will be necessary to consider, briefly, some of the properties and constituent parts of that wondrous envelope of our globe.*

CONCISE VIEW OF THE PROPERTIES AND CONSTITUTION OF THE ATMOSPHERE.

That the atmosphere is a fluid completely surrounding the whole earth needs no demonstration; how far its *dimensions* extend into space is a problem of far more difficult solution. Had it been a fluid of uniform density, the length of the mercurial column suspended in the barometer, would have demonstrated that its greatest elevation could not have exceeded five miles; but the air being very elastic, the higher portions of the mass which covers our globe, sustaining a diminished pressure, must swell upwards, and occupy a proportionably wider space. This property removes the boundary of the atmosphere to a much higher elevation; and from the consideration that the reflection of the Sun's rays, unless the sky be overcast, is constant, so that there is total darkness in no climate, even at midnight, it has been inferred, that the elevation of the atmosphere must, at least, be equal to 1688 miles. This very great extension of a rare expansive atmosphere appears conformable to the general phenomena. Near the equator it may stretch out even much farther, and yet its elevation can never exceed a certain absolute limit. Though this extreme boundary may surpass all our ordinary conceptions, it yet scarcely exceeds the twentieth part of the distance of the Moon, which was held by the ancients to communicate with our atmosphere.

Though we can sound the depths of this great aerial ocean but approximately, we are not so situated with regard to its *weight*. This property has been long demonstrated to exist, and even those differences of pressure upon the earth, its supporting surface, which must attend the fluctuations of a body of such attenuated fluidity perpetually agitated, can be measured and compared.

To the properties of magnitude and weight must be added those of *elasticity, expansibility, transparency, and insipidity*.

Air is also generally considered to be invisible, but it is certain that, like water, it is a colored fluid; it is naturally blue, as that of the latter is green,

* It would be extremely difficult, in an article which involves so great a number of facts and opinions, to assign an individual authority to each of the following statements. It is, therefore, proper to mention, that the authors who have been principally consulted for this abridgment of a very extensive and complicated subject, are these:—

Daniell, J. F., Esq., F. R. S.—“*Meteorological Essays and Observations.*” 2d edit.

Leslie, Professor.—Articles “*Climate*” and “*Meteorology*,” in the Supplement to the *Encyclopædia Britannica*; and “*On Heat and Moisture.*”

Forster, Thos., Esq.—Article “*Cloud*,” in Supplement to *Ency. Brit.*

Howard, Luke, Esq.—“*Nomenclature and Observations on Clouds.*”

Bory de St. Vincent.—Article “*Météores*,” in *Dict. Class. d'Hist. Naturelle*.

Harvey, G., Esq.—“*On the Formation of Mists*,” in *Brande's Journal*. 1823.

Davy, the late Sir H.—*Phil. Trans.* 1819.

but both colors acquire intensity only from the depth of the transparent mass. This we perceive in air, on viewing distant objects, whose colors are always tinted by the deepening hues of the interjacent range of atmosphere. The remotest hills seem lost in a cerulean vesture. The blending of the atmospheric azure with the colors of the solar rays, produces those compound, and sometimes remarkable, tints with which the sky and clouds are emblazoned.

The constitution of the rare medium in which we "live, and move, and have our being," has been unfolded by the brilliant discoveries of modern chemistry. Experiments have been made at distant points, repeated on the summits of the loftiest mountains, and applied to portions of air brought down by balloons from the altitude of five miles; and the result has been the conclusion, that the constitution of our atmosphere is the same in all places on the surface of the earth, and at every elevation that has yet been explored. It appears to consist of a combination of two distinct expansible gases, the interstices of which are penetrated by ever-varying proportions of condensible elastic vapor. The gases are combined in different quantities, a single portion of oxygen being united to three parts by weight, or four parts by bulk, of nitrogen; there is also a very slight admixture of carbonic acid gas, amounting to perhaps a thousandth part of the whole. The particles of the condensible elastic vapor or steam are invisible, and insinuate themselves between the particles of air, and filter through them with as little union, but with a similar kind of retardation, as those of water ascend and diffuse themselves through a sponge. These distinct atmospheres of air and vapor thus mechanically mixed, have different relations to heat, and their states of equilibrium, when enveloping a sphere of unequal temperature, are incompatible with each other.

The triple assemblage is constantly exposed to the action of *heat*, a principle scarcely known but by some of its properties, which, combining with all bodies, even the most dense, either enlarges their bulk, or, dissolving the tie which holds their atoms in a solid form, sets them loose in fluidity, or finally expands them into vapor, and removes the seat of their existence from the earth to the heavens. The quantity of heat absolutely present in any one place is extremely difficult to measure; but its fluctuations are perpetual, and often evident. And as every accession or diminution of temperature is accompanied by some change, and often more than one, in the integral parts of bodies, or in the relation of one body to others which may be contiguous, it follows that these changes are infinite in number and character, and that the agent which produces them may be considered the main-spring of all the grand movements in the atmosphere.

The atmosphere, so compounded, may be considered a universal solvent, and though itself *inodorous*, it is the medium of all smells, and dissolving the different odorous effluvia, is charged with the emanations of all the various substances it sweeps.

There is still to be added to this enumeration of the ingredients of this astonishing compound, the subtle and mysterious agencies of light, and of the electric, galvanic, and magnetic fluids; and last, as if to baffle all inquiry, and render analysis impossible, there is, in universal operation, a perpetual agitation and commixion of the whole mass.

When we reflect upon this ever-agitated heterogeneous fluid, compounded of the most active elements of life and destruction, constantly combining,—separating, now evident to the most ordinary sense, now escaping the grasp of imagination, we cannot, rationally, be surprised at the little, comparatively, that is really known concerning it. All within the power of the most ardent student is to collect the few facts that are established, to dismiss conjecture and hypothesis, and to apply himself to make additions to our knowledge by carefully observing, and accurately and luminously describing, the processes during which he is permitted to be present.

“By invisible, but ever-active agencies, the waters of the deep are raised into the air, whence their distribution follows, as it were by measure and weight, in proportion to the beneficial effects which they are calculated to produce. By gradual, but almost insensible expansions, the equipoised currents of the atmosphere are disturbed, the stormy winds arise, and the waves of the sea are lifted up; and that stagnation of air and water is prevented, which would be fatal to animal existence. But the force which operates is calculated and proportioned; the very agent which causes the disturbance, bears with it its own check, and the storm, as it vents its force, is itself setting the bounds of its own fury.”*

It is evident, from a slight view of these “complicated and beautiful contrivances,” that it is hopeless to expect that all the causes of the phenomena of the atmosphere will ever be entirely attained by human science. At present but few are known, and those imperfectly. Amongst the principal ones which most affect the subject of our present inquiry are, undoubtedly, heat and electricity. The first raises and suspends the evaporated waters invisibly in the air, until some more powerful attraction dissolves the union, and the deserted moisture, exposed to view, falls again to the earth, and revisits it in the varied forms of clouds, mist, rain, dew, snow, hail, sleet, and hoar-frost. To electricity may be principally attributed the more splendid phenomena of lightning, the aurora-borealis, and the other igneous meteors. And the effect of these causes, variously combined and infinitely modified by other agents, is felt in those currents of atmospheric air, which are described by a sacred writer, as “going toward the north, and toward the south, as whirling about continually and returning again according to their circuits.”

Imperfect as the preceding sketch necessarily is, it is founded on facts which have been collected by some of the most indefatigable observers,

* Daniell.

and faithful historians, of what they saw. While it enables us to judge a little more correctly, perhaps, of some of the causes of those conditions of our atmosphere, which are hourly presenting themselves to our view, or affecting the state of our existence, it cannot but excite emotions of astonishment and of pity, when we see some of the most ignorant of our species boldly pretending to predict the results of the operations, visible and invisible, near and remote, of this vast and complex, and almost unknown apparatus.

We shall present a contrast to the dicta of these daring empirics, by an extract from the recent publication of a gentleman,* highly distinguished by the services he has rendered meteorology, which contains a few of the most general and best authenticated facts relating to the phenomena of the atmosphere. From these we may safely reason; and a knowledge of them may frequently enable us to detect order and regularity among objects proverbially spoken of as uncertain and irregular.

SOME OF THE MORE PARTICULAR PHENOMENA OF THE ATMOSPHERE OF THE EARTH.

"The mean height of the barometer (i. e. the mean weight or pressure of the atmosphere) at the level of the sea, is the same in every part of the globe.

"The barometer constantly descends in a geometrical progression for equal ascents in the atmosphere, subject to a correction for the decreasing temperature of the elevation.

"The mean temperature of the earth's surface increases gradually from the poles to the equator.

"The mean temperature of the atmosphere decreases from below upwards in a regular gradation.

"The barometer at the level of the sea is but slightly affected by the annual or diurnal fluctuations of temperature; but, in the higher regions of the atmosphere, is, on the contrary, greatly affected by them.

"The heating and cooling of the atmosphere, by the changes of day and night, take place equally throughout its mass.

"The average quantity of vapor in the atmosphere decreases from below upwards, and from the equator to the poles.

"The western coasts of the extra-tropical climates have a much higher mean temperature than the eastern coasts.

"A wind generally sets from the sea to the land during the day, and from the land to the sea during the night, especially in hot climates.

"Between the tropics the fluctuations of the barometer do not much exceed one quarter of an inch, while beyond this space they reach to three inches.

* Daniell. Essays.

"In the temperate climates the rains and the winds are variable.

"As we advance towards the Polar Regions, we find the irregularities of the wind increased; and storms and calms repeatedly alternate, without warning or progression.

"In the extra-tropical climates, a fall in the barometer almost always precedes a period of rain, and indicates a change or acceleration of the aerial currents.

"Barometers, situated at great distances from each other, often rise and fall together with great regularity.

"More than two currents may often be traced in the atmosphere at one time, by the motions of clouds, &c.

"The force of the winds does not always decrease as the elevation increases; but, on the contrary, is often found to augment rapidly.

"The variations of the barometer are less in high situations than in those at the level of the sea.

"In Great Britain, upon an average of ten years, westerly winds exceed the easterly in the proportion of 225 to 140; and the northerly winds exceed the southerly, as 192 to 173.

"Northerly winds almost invariably raise the barometer, while southerly winds as constantly depress it.

"The most permanent rains from this climate come from the southern regions.

"The mean height of the barometer varies but little with the changes of the seasons.

"The apparent permanency and stationary aspect of a cloud is often an optical deception, arising from the solution of moisture on one side, and its precipitation on the other.

"The quantity of vapor in the atmosphere in the different seasons of the year (measured on the surface of the earth, and near the level of the sea) follows the progress of the mean temperature.

"The pressure of the aqueous atmosphere, separated from that of the aerial, generally exhibits directly opposite changes to the latter.

"Great falls of the barometer are generally accompanied by a temperature above the mean for the season, and great rises by one below the same."

The same authority also states, that "The British islands are situated in such a manner as to be subject to all the circumstances which can possibly be supposed to render a climate irregular and variable. Placed nearly in the centre of the temperate zone, where the range of temperature is very great, their atmosphere is subject, on the one side, to the impressions of the largest continent of the world; and, on the other, to those of the vast Atlantic Ocean. Upon their coasts the great stream of aqueous vapor, perpetually arising from the western waters, first receives the influence of the land, whence emanate those condensations and expansions which de-

flect and reverse the grand system of equipoised currents. They are also within the frigorific effects of the immense barriers and fields of ice, which, when the shifting position of the sun advances the tropical climate towards the northern pole, counteract its energy, and present a condensing surface of enormous extent to the increasing elasticity of the aqueous atmosphere." Amidst all the uncertainty and seeming confusion arising from this complication, general principles may still be recognised; and, it is believed, the more they are studied, the more obvious they will appear.

EVAPORATION.

The formation and never-failing supply of the condensible elastic vapor, which has been described to be one of the constituents of the atmosphere, is provided for by that law of nature, which has endued water, under all circumstances, even when congealed into ice, with the power of emitting vapor or steam, in a quantity proportioned to its temperature. The presence of water over the globe may be said to be universal; for even in the fraction which is estimated to be land, it is so profusely distributed as to maintain a perpetual exhalation. "Pasturage, corn-fields, or forests support a continual evaporation, augmented only by the dryness of the air, and the rapidity of its sudden contacts. Even ploughed land will supply as much moisture to the exhaling fluid as an equal sheet of water. It is only when the ground is quite parched, that it ultimately retains its latent store."* As this property of water clings to it in all its metamorphoses, and attends it in all its localities, it follows that the process of evaporation is constant and universal. It is generally also invisible, but there are times when it may be seen, and we can inspect, at the level of the earth, some of those operations which usually take place in the higher regions of the atmosphere. In the calm evening of a fine summer's day, the rudiments of future clouds often present themselves to our sight, in the first part of their flight; and though they disappear, it is no proof of the suspension, or even of the diminution, of the process, which proceeds as powerfully and effectually during the most brilliant aerial transparency as in the thickest mist.

By means of the visibility which cold imposes upon aqueous vapor, we can often satisfactorily trace its upward progress in the clouds of fine weather. "During the heat of the day it rises from the surface of the land and waters, and reaches its point of condensation in greater or less quantities at different altitudes. Partial clouds are formed in different parallel planes, which always maintain their relative distances. The denser forms of the lower strata, as they float along with the wind, shew that the greater abundance of precipitation has been at the first point of deposition, while the feathery shapes and lighter texture of the upper attest a rarer atmosphere. These clouds do not increase beyond a certain point,

* Leslie.

and often remain stationary in quantity and figure for many hours; but, as the heat declines, they gradually melt away, till at length, when the sun has sunk below the horizon, the ether is unspotted and transparent. The stars shine through the night with undimmed lustre, and the sun rises in the morning in his brightest splendor. The clouds again begin to form, increase to a certain limit, and vanish with the evening shades. This gradation of changes, which we see so often repeated in our finest seasons, may at first seem contrary to the true principles; and the precipitations, which occur with an *increase* of temperature, and disappear with its *decline*, may, without reflection, be regarded as diametrically opposed to correct theory. But a little consideration will show that such conclusions would be untrue. The vapor rises, and is condensed; but in its descent falls into a warmer air, where it again is evaporated, and becomes invisible; and as the quantity of evaporation from the surface of the earth is exactly equal to supply this process above, the cloud neither augments nor decreases. When the sun declines, the ground cools more rapidly than the air; evaporation decreases, but the dissolution of the cloud continues. The supply at length totally ceases, and the cloud subsides completely away. The morning sun revives the exhalations of the earth, the process of their condensation and consequent cloud-like form commences, and they again undergo the same series of changes.”*

Descending again to the operations on the earth's surface, we may observe that the ascent of the aqueous vapor is modified by the relative differences of the temperatures of the exhaling fluid and the ambient air. Two of these it may be useful to describe. They are,

1. When the temperature of the fluid is *above* that of the air;
2. When the temperature of the fluid is *below* that of the air.

In the first case, the evaporation is proportionate to the difference of temperature. The gaseous fluid in contact with the surface of the warmer water becomes lighter by receiving portions of the excess of heat, and, rising up, carries with it in its ascent the entangled vapor, which has been cooled down by the low temperature of the air into the form of steam. This is the visible evaporation referred to above.

In the second case, though the water is colder than the air, it still, from the law before mentioned, emits vapor from its surface, but invisibly, as there is no condensing disposition now in the air. The vapor, therefore, neither having the power to displace the gaseous fluid, nor heat to cause a circulation of it, can only pass by filtering through its interstices—a most beautiful and astonishing instance of the extreme divisibility of matter.

The force of aqueous vapor disengaged at different temperatures has been determined with great accuracy, and the amount of evaporation has been demonstrated to be, other things being equal, always in proportion to this force.

* Daniell.

It may be easily imagined, that as the interstices of the gaseous fluid can contain but a certain quantity of elastic vapor, there would naturally be a limit to evaporation. This is actually the case. It very often happens that the interstices are found to be full, and can hold no more, and that then evaporation ceases; sometimes, indeed, they may be said to run over, and it is then we see the excess in the shape of steam, or mist, or cloud. The capacity of these interstices of the gaseous fluid becomes larger or smaller in proportion to the temperature of their particles, and the effect of their contraction or expansion is precisely similar to the grasp or relaxation of the hand on a piece of imbibing sponge. At a low temperature, or when the grasp is tightest, a certain quantity can only enter. On the contrary, at a high temperature, or when the sponge is permitted to expand to the utmost, its capacity is increased, and a large volume may be contained.

The total quantity of aqueous elastic vapor which can enter between the interstices of the gaseous fluid, or which the latter can hold suspended, depends upon temperature, but this quantity is invariably at the same temperature. A volume of air may contain less than this quantity, but never more. When it has this exact quantity, it will remain transparent, and is said to be saturated, or at its *point of saturation*. It is then as damp as it can be; any attempt to insert more vapor will fail, and the rejected vapor will become visible in the form of steam. If we lower the temperature, the aerial interstices will contract, and some of the contained vapor will be squeezed out in the same form. We may increase the temperature to any extent without any visible change, but we render the air drier in proportion to the degree to which we ascend, and in the same degree capable of receiving and supporting an additional quantity of humidity. Atmospheric pressure also affects the amount of the quantity suspended, by opposing the diffusion and retarding the formation of the vapor. From the aqueous fluid being so abundantly spread over the face of the earth, there can be no doubt that the permanently elastic or gaseous atmosphere would very speedily be saturated with its vapor, did not some cause prevent its universal diffusion. This never-failing cause is inequality of temperature, which excites, or diminishes, or suspends, in the way we have described, the process of evaporation.

The absolute quantity of moisture that air is capable of containing, may be conceived from the following statement of Mr. Leslie:—"Air, at the freezing point, is capable of holding a portion of moisture equal to the 160th part of its own weight; at the temperature of 59° , the 80th part; at that of 86° , the 40th part; at 113° , the 20th part; and at that of 140° , the 10th part; so that the air has its dryness doubled at each rise of temperature, answering to 27° of Fahrenheit. While the temperature, therefore, advances uniformly in arithmetical progression, the dissolving power, which

this communicates to the air, mounts with the accelerating rapidity of a geometrical series."

By the improved instruments and accurate observations of this gentleman and others, the total quantity of moisture which could be suspended at one time in the air can be correctly estimated. It has been stated by him, that, at 68° Fahrenheit, a cubic mass of air, measuring 40 inches every way, can retain 252 grains of water. But if a larger scale be preferred, the same numbers will express in pounds troy the quantity of water required to saturate a perfectly dry mass of air constituting a cube of twenty yards in dimension. If the greatest amount possible of the aqueous element were to be suspended in the atmosphere, and this were to pass from a state of absolute dampness into that of extreme dryness, and discharge the whole of its watery store, it would form a sheet of somewhat less than five inches in depth. To furnish the usual supply of rain, the air must, therefore, undergo very frequent changes, equal to that of from dryness to humidity in the course of the year.

The average amount of evaporation in the neighbourhood of London per annum, calculated by Mr. Daniell's hygrometer, a most elegant and perfect instrument for ascertaining the humidity of the atmosphere, is 23,974 inches. The average weight of the quantity of water raised by this process, from a circular surface of six inches diameter, 0.81 gr. per minute. The results of actual measurement by Mr. Howard accord most satisfactorily with this method of estimating the amount of evaporation, and prove most incontestably the accuracy of the calculations upon which it is founded.

The rate at which this process proceeds near London, during the several months of the year, is estimated by Mr. Daniell, and recorded in the *British Almanac*, as follows :

	in.		in.
January . . .	0.413	July . . .	3.293
February . . .	0.733	August . . .	3.327
March . . .	1.488	September . .	2.620
April . . .	2.290	October . . .	1.488
May . . .	3.286	November . .	0.770
June . . .	3.760	December . .	0.516

The smallest quantity of water is, therefore, lifted into the atmosphere during the month of January, and the greatest in June. The mean quantity held in solution in a cubic foot of air, is 3.789 gr.

The rate of exhalation from the surface of the ground is scarcely of less consequence than the fall of rain, and a knowledge of it might often direct the most important operations. Mr. Leslie invented an instrument for measuring the quantity of moisture exhaled from a humid surface in a given time. This he called the *Atmometer*, and he has estimated that the daily exhalation from a sheltered surface of water would, at the mean dryness of winter, lower it 0.018 inches and at the mean of summer 0.048 inches.

And he gives the following instance of its use: Suppose a pool for the supply of a navigable canal exposed a surface equal to ten English acres, and that the atmometer sunk 80 parts during the lapse of 24 hours, the quantity exhaled in that time would be 2904 cubic feet, or about 81 tons, equal to 1700 imp. gall. per acre.

The dissipation of moisture is much accelerated by the agency of sweeping winds, the effect being sometimes augmented 5 or even 10 times. In general, this augmentation is proportional to the swiftness of the wind, the action of still air itself being reckoned equal to that produced by a celerity of eight miles each hour.

CLOUDS, FOGS, AND MISTS.

The presence of the ocean of vapor, which we have described as constantly ascending from the earth, and constituting part of the atmosphere, is, as has also been observed, not always evident to the sight; in its elastic state it is always invisible, and, therefore, it is only in some of its changes that the eye can detect it. By one of the most remarkable of these, those masses of visible aqueous vapor are formed, which, floating in the sky, or drifting through it with the wind, at different elevations, with every variety of color and form, are called *clouds*; or which, recumbent on the surface of the land or of the water, and spread over greater or smaller portions of them, are denominated *fogs*, or *mists*, according to their intensity. In all cases, their composition is similar, and consists of the moisture deposited by a body of air, in minute globules.

Their formation, in every position, is a consequence of decrease of temperatures in some parts of the atmosphere where a certain proportion of aqueous elastic vapor is present; but in those where the latter condition may be wanting, it is evident that the developement of cloud will not follow the decrement of temperature. Nothing is more common than the fact of the necessary conditions existing in some of the atmospheric strata, and at the same time being absent in others; and thus we can understand the causes of the alternate beds of clouds and clear air, which often diversify the sky in serene weather. We can hence also comprehend how, in stormy weather, a solitary cloud sometimes appears to stand stationary over a mountain-top, while myriads of other clouds drift past it on the gale. An observer on the summit feels the multitudinous dew-drops of the seemingly fixed cloud sweeping by with great velocity, and discovers the stationary aspect which it exhibited below to be altogether an illusion. The fact is, the inferior invisible beds of air are relatively warmer and more moist. They dash against the sloping side of the mountain, and are reflected up to the plane of condensation in the atmosphere, where they give out their excess of water in the form of clouds. Above the cooling influence of the mountain-top the temperature of the air may not be depressed to the same point, and hence it continues clear.

If the globules of water which constitute a cloud, descend, in consequence of their weight, and come once more within the influence of an elevated temperature, the aqueous vapor necessarily becomes again invisible. In this way, the under surface of a stratum of clouds becomes nearly parallel, or rather concentric, with the surface of the sub-adjacent landscape over which it floats. Above this first range of clouds the temperature may still be considerably higher, and hence another large body of air must be passed through, before a temperature sufficiently low be arrived at, to cause a second deposition of clouds.

M. Fresnel ingeniously supposes that the air contained between the minute globules of vapor, or the very fine crystals of snow, which form a mass of clouds, is always of a higher temperature than the surrounding clear air. He supports this opinion on the well known facts, already alluded to, that the rays of the sun will pass through the air without heating it, unless the air be in contact with water, land, or some other reflecting object. The cloud accordingly forms such a body as will stop the sun's rays, and force them to warm, not only the air in external contact with it, but all the air in its interstices. It follows, therefore, that though the mass of waters in a cloud be heavier than the surrounding air, the warmer air in the interior of the cloud buoys it up, and causes it to float.*

M. Gay Lussac, on the other hand, refers the mounting of clouds in the air to the impulsion of the ascending currents, which result from the difference of temperature between the surface of the earth and the air in elevated regions.

The formation of clouds may be observed with most advantage in Alpine countries, as they are there so frequently produced under the eye, upon the sides or the summits of mountains, by the condensation of the vapor in the sheet of air immediately over them. A mountain cloud is at first of but small extent, but it enlarges insensibly, and is swept by the winds into the bosom of the air, where it either meets and unites with others, or various tufts of these are scattered over the sky. These aerial groups appear, while drifting through the sky, to avoid dashing themselves upon the mountain peaks in their course, and, as if endowed with instinctive repulsion, they bound over the crest of a mountain in a concentric curve, and slide down into the valley on the other side. The French naturalists, with much plausibility, ascribe this beautiful phenomenon to electricity. M. Bory de St. Vincent thinks, that, when small tufts of cloud are carried towards the sides or the summit of a mountain, they move with less rapidity than the force (wind) which moves them, and this force consequently arriving sooner at the obstacle, is reflected, and meets and checks the cloud in its progress.

The mean height of the clouds may be conceived by the following extract from Mr. Leslie. "We shall not err much, if we estimate the position

of extreme humidity at the height of two miles at the pole, and four miles and a half under the equator, or a mile and a half beyond the limit of congelation. This range is nearly parallel to the curve of perpetual congelation in the polar regions, but bends nearer to it in approaching the equatorial parts.

CLASSIFICATION OF CLOUDS.

Infinitely diversified as the forms of clouds may appear to be, correct observers have stated that they may all be comprised in seven modifications. Names and definitions have been given to these by Mr. Howard and Mr. Forster. By this classification and nomenclature their appearances may be noted down and transmitted to contemporary and future observers, for the purposes of comparison and record. A great advance has consequently been made in the perspicuous description which has succeeded to the vague and unintelligible generalities of preceding ages. Mr. Howard's names are in Latin; to them we annex Mr. Forster's English nomenclature.

These following modifications are arranged in the order of their ordinary elevation, but which is very frequently deranged:—

Howard.	Forster.
CIRRUS	<i>Curl-cloud.</i>
CIRROCUMULUS	<i>Sonder-cloud.</i>
CIRROSTRATUS	<i>Wane-cloud.</i>
CUMULOSTRATUS	<i>Twain-cloud.</i>
CUMULUS	<i>Stacken-cloud.</i>
NIMBUS	<i>Rain-cloud.</i>
STRATUS	<i>Fall-cloud.</i>

In the annexed engraving are representations of the more usual forms of these genera, and we subjoin a few remarks on each to render their classification still more easy. In doing this, we shall depart from the above order, for the purpose of taking the simpler forms first.

CIRRUS—*Curl-cloud.* Fig. 1.

The *curling* and flexuous forms of this cloud constitute its most obvious external character, and from these it derives its name. It may be distinguished from all others by the lightness of its appearance, its fibrous texture, and the great and perpetually changing variety of figures which it presents to the eye. It is generally the most elevated, occupying the highest regions of the atmosphere.

The *comoid cirrus cloud*, vulgarly called the *mare's tail*, is the proper cirrus. It has, as represented in the engraving, somewhat the appearance of a distended lock of white hair, or of a bunch of wool pulled out into fine pointed ends (*a**).

In variable and warm weather in summer, when there are light breezes, long and obliquely descending bands of cirrus are often observed, and seem sometimes to unite distinct masses of clouds together. Frequently, by means of the interposition of these cirri, between a cumulus and some other cloud (as, for example, cirrostratus), the cumulostratus, and ultimately the nimbus, is formed.

* See Indications of Weather, p. 25.

Upon a minute examination of the cirrus, every particle is found to be in motion, while the whole mass scarcely changes its place. Sometimes the fibres which compose it, gently wave backwards and forwards, to and from each other.

After a continuance of clear, fine weather, the cirrus is often observed as a fine whitish line of cloud, at a great elevation, like a white thread stretched across the sky; the ends of which seem lost in each horizon (*b**).

To this line of cirrus others are frequently added laterally; and sometimes becoming denser by degrees, and descending lower in the atmosphere, inosculate† with others from below, and produce rain. To this kind the name of *linear cirrus* has been given. Sometimes on the sides of the first line of a cirrus, clouds of the same kind are propagated, and sent off in an oblique or transverse direction, so that the whole phenomenon has the appearance of net-work; this has been denominated *reticular cirrus*.

Though the above-mentioned varieties of the cirrus are all composed of *straight* lines of cloud, either parallel, or crossing each other in different directions; they are ranged under the head of *cirrus*, or *curl-cloud*, from their analogy of texture to the substance from which this cloud is named.

CUMULUS—*Stacken-cloud*. Fig. 9.

This cloud is easily known by its irregular hemispherical or heaped superstructure, hence its name *cumulus*, a *heap* or *pile*. It has usually a flattened base. The mode of its formation is by the gathering together of detached clouds, which then appear *stacked* into one large and elevated mass, or *stacken-cloud*. The best time for viewing its progressive formation is in fine settled weather. About sunrise small thinly-scattered specks of clouds may be observed. As the sun rises, these enlarge, those near each other coalesce, and at length the cumulus is completed. It may be called *the cloud of day*, as it usually exists only during that period, dissolving in the evening, in a manner the exact counterpart of its formation in the morning. Cumuli, which are of a more regular hemispherical form, whitish-colored, and which reflect a strong silvery light when opposed to the sun, appear to be connected with electrical phenomena. Those seen in the intervals of showers are more variable in form, and more fleecy with irregular protuberances. When this kind of cloud increases so as to obscure the sky, its parts generally inosculate, and begin to assume that density of appearance which characterizes the cumulostratus.

STRATUS—*Fall-cloud*. Fig. 11.

This kind of cloud rests upon the surface of the globe. It is of variable extent and thickness, and is called *stratus*, a *bed* or *covering*. It is gen-

* See Indications, p. 95.

† Inosculation is a union by the conjunction of the extremities.

erally formed by the subsidence of vapor in the atmosphere, and has, therefore, been denominated *fall-cloud*. This genus includes all fogs, and those creeping mists, which in summer evenings fill the valleys, remain during the night, and disappear in the morning. The best time for observing its formation is on a fine evening, after a hot summer's day: as the cumuli which have prevailed through the day decrease, a white mist forms by degrees close to the ground, or extends only for a short distance above it. This cloud arrives at its density about midnight, or between that time and morning, and it generally disappears about sunrise. It is, for this reason, called by some, *the cloud of night*. The coming in of autumn is generally marked by a greater prevalence and density of this cloud. In winter it is still denser. It has often been found to be electrified positively. The stratus should not be confounded with that variety of the cirrostratus, which is similar in external appearances; the test to distinguish them is, the stratus does not wet objects that it alights upon;—the cirrostratus moistens every thing it touches.

CIRROCUMULUS.—*Sonder-cloud*. Fig. 2.

This consists of extensive beds of a number of little, well-defined, orbicular masses of clouds, or small *cumuli*, in close horizontal opposition; but at the same time lying quite asunder (*sonder-cloud*), or separate from one another. It is to be distinguished from some appearances of the cirrostratus which resemble it, by the dense and compact form of its component nubeculæ (*little clouds*). From the intermediate nature of this cloud between the *cirrus* and *cumulus*, it has been called *cirrocumulus*. The word *sonder-cloud* is of Saxon derivation.

Sometimes the nubeculæ are very dense in their structure, very round in their form, and in very close opposition (c*).

At other times they are of a light, fleecy texture, and of no regular form.

The cirrocumulus of summer is of a middle nature between the two last; its nubeculæ vary in size and in proximity; and its picturesque appearance in this season often presents, by moonlight, as Bloomfield expresses it,

The beauteous semblance of a flock at rest.

The formation of this kind of cloud is either spontaneous, that is, unpreceded by any other, or results from the changes of some other modification. Thus the cirrus or cirrostratus often changes into cirrocumulus, and *vice versa*. If it does not terminate with this kind of change, it subsides slowly as if by evaporation.

* See Indications, p. 95.

CIRROSTRATUS—*Wane-cloud*. Fig. 3, 4, 5, 6, 7.

This cloud is distinguishable by its flatness, and great horizontal extension in proportion to its perpendicular height. Under all its various forms, it preserves this characteristic. It often results from the fibres of the cirrus, after descending from a higher station in the atmosphere, subsiding into strata of a more regularly horizontal direction, and hence it is called *cirrostratus*. As it is generally changing its figure, and slowly subsiding, it has received the name of *wane-cloud*. It originates more frequently from cirrus than from any other, and less from cumulostratus than cirrocumulus. Being once formed, it sometimes re-assumes the character of the modification from which it originated, but more frequently it evaporates by degrees, or by inosculating, with some other modification, produces the cumulostratus, and eventually the nimbus, falling in rain.

Sometimes this cloud is disposed in wavy bars or streaks, in close horizontal opposition, and these bars vary infinitely in size and color, generally blended in the middle, but distinct towards its edges, *fig. 4*. A variety not unlike this, is the *mackerel-back sky* of summer evenings. It is often very high in the atmosphere. Another common variety appears like a long streak, thickest in the middle, and wasting away at its edges. This, when viewed in the horizon, has the appearance of *fig. 7*. It often seems to lie on the summit of the cumulostratus, as represented in the engraving; in this case, the density of the latter increases in proportion as the former form and evaporate upon it. The result of this intermixture, and the consequent density, is the formation of the nimbus, and the fall of rain.

Another principal variety of the cirrostratus is one which consists of small rows of little clouds, curved in a peculiar manner; it is from this curvature called *cymoid*. *fig. 5*. (*d**)

Fig. 6 is the representation of a similar one, less perfectly formed, having more of the character of the cirrocumulus, and is often produced when a large cumulus passes under the variety marked *fig. 7*. (*e* †.)

Another remarkable development of this varying genus is, that extensive and shallow sort of cloud, which occurs particularly in the evening and during night, through which the sun and moon but faintly appear. It is in this cloud that those peculiar refractions of the light of those bodies, called halos, mock suns, &c. usually appear. (*f* †.)

CUMULOSTRATUS—*Twain-cloud*. Fig. 9.

The base of this modification is generally flat, and lies on the surface of an atmospheric stratum, the superstructure resembling a bulky cumulus overhanging its base in large fleecy protuberances, or rising into the forms of rocky mountains. Considerable masses of these frequently are grouped upon

* See Indications, p. 35.

† Ibid.

† Ibid.

a common stratum or base, from which it has been named *cumulostratus*. It derives the other appellation, *twain-cloud*, from the frequently visible coalescence of two other modifications, as, for example, the cirrus and the cumulus. Its density is always much greater than the cumulus. Cumulostratus sometimes forms spontaneously, but is generally produced by the retardation of the cumulus in its progress with the wind, which then increases in density and lateral dimensions, and finally protrudes over its base in large and irregular projections. Sometimes contiguous cumuli unite at their bases, and at once become cumulostratus. Sometimes the upper currents of air conduct cirrostratus near the summits of cumuli, or pierce them, as is shown in the engraving. The effects of this junction have been described under the last modification.

Cumulostratus often evaporates, sometimes changes to cumulus, but, in general, it ends in nimbus, and falls in rain. In long ranges of these clouds it has been observed that part has changed into nimbus, and the rest remained unchanged.

NIMBUS—Rain-cloud. Fig. 11.

This is not a modification depending upon a distinct change of form, but rather from increase of density and deepening of shade in the cumulostratus, indicating a change of structure, which is always followed by the fall of rain. This has been, therefore, called *nimbus*, (*a rainy black cloud*.) Any one of the preceding six modifications may increase so much as to obscure the sky, and, without falling in rain, “dissolve,” and “leave not a rack behind.” But when cumulostratus has been formed, it sometimes goes on to increase in density, and assume a black and portentous darkness. Shortly afterwards the intensity of this blackness yields to a more grey obscurity, which is an evidence that a new arrangement has taken place in the aqueous particles of the cloud; the nimbus is formed, and rain begins to fall. The shower continues until another interior change succeeds, when the nimbus is extinct, and more or less of other modifications re-appear: the cirrus, cirrostratus, or perhaps the cirrocumulus, is seen in the higher regions of the atmosphere, and the remaining cumulus, no longer retarded, sails along in a current of wind nearer the earth. These effects may be satisfactorily observed when showers fall at a distance; the nimbus can then be seen in profile, and the process of its formation and destruction followed through all its stages.

In addition to this sketch, it may be stated, that masses of cloud may present themselves to the observation so indefinite and shapeless, as to render it difficult to refer them at once to any of the preceding modifications; but it is believed that in every case, if the observations be attentively prolonged, a tendency to resolve into some of these forms will, sooner or later, be discovered. A circumstance which not only shows their distinct nature, but proves that there are some general causes why aqueous vapor,

suspended in the air, should assume, though with great varieties of size and form, certain definable and constant modifications.

INDICATIONS OF APPROACHING CHANGES OF THE WEATHER FROM THE FORM OF THE CLOUDS.

The prognostics of coming weather must always be deduced from those clouds which ultimately prevail; for, in variable weather, all the modifications may be seen in a single day.

CIRRUS. The *comoid*, or *mare's tail*, variety of this cloud described *a*, p. 90, is an accompaniment of a variable state of weather, and forebodes wind and rain. In very changeable seasons, the direction of the fine and almost evanescent tails varies considerably in a few hours. When the tails have had a constant direction towards the same point of the compass for any considerable time, it has been frequently observed that a gale has sprung up from the quarter to which they had previously pointed.

The variety *b*, p. 91, is the first indication of a change to wet.

CIRROCUMULUS. When this cloud prevails, we may, in general, anticipate, in summer, an increase of temperature; in winter, it often precedes the breaking up of a frost, and indicates warm and wet weather.

The variety *c*, p. 92, is striking before, or about the time of thunder storms in summer. It is commonly a forerunner of storms, and has been remarked as such by the poets.

CIRROSTRATUS. The prevalence of this cloud is always a sign of rain or snow.

The *cymoid* arrangement *d*, p. 93, is a sure indication of stormy weather, and the variety *e*, p. 93, is almost always so.

The variety *f*, p. 93, is the surest prognostic we are acquainted with, of an impending fall of rain or snow.

CUMULOSTRATUS may always be regarded as a stage towards the production of rain or snow, and, in this case, always ends in the nimbus.

NIMBUS is always followed by a fall of rain or snow.

Fogs and mists, when they extend over large surfaces varied with land and water, are generally produced in fine calm weather, after the sun's rays have ceased to warm the earth, by the higher masses of air, which have been rapidly cooled in the more elevated regions of the atmosphere, descending by their weight, and intermixing with the lower, and lighter, and still warmer strata. These are gradually chilled, until the undermost stratum is affected, first to dampness, then to a slight precipitation scarcely visible to the eye, and finally, to mist and fog. The earth, during clear nights, immediately on the withdrawing of the heat-imparting energies of the sun, begins to emit the particles of heat it had acquired during the day, or, in ordinary language, to cool. The atmosphere does the same, but at a much slower rate. In the race, therefore, between the cooling powers of these

two bodies, the start is usually made at sunset with the earth's surface warmer than the incumbent air. The first, by its more rapid descent, overtakes the latter at some point of equal temperature, and passing its sluggish competitor, becomes colder, and, of course, instead of warming the stratum of air in contact, as it did in the first part of its course, it now, on the contrary, becomes an absorber of heat, and, consequently, cools the contiguous bodies. In both these cases the process is favorable to the formation of mist, but in different modes. In the first, it assists the intermixture of the two differently warmed bodies of air, by keeping up the temperature of the lower one, and by thus increasing its disposition to ascend, the mingling and the deposition are more rapid and complete. In the latter case, it is in the same condition with relation to the air near the surface, as the strata above it, namely, cooler, and therefore it acts similarly; the surface-air being now between two cooling masses, the rate of its condensation and consequent precipitation of moisture is at least continued, and perhaps increased.

The phenomenon of mists forming over lakes and rivers, when the atmosphere of their banks and adjacent land is entirely free from visible vapor, is a very remarkable one, and has excited considerable attention. The late Sir H. Davy observed and communicated to the public some curious facts, which have contributed very much to our knowledge on the subject. The principal operating cause in producing this singular effect, is the difference of the rate of cooling, in the absence of the sun, in fluid and in solid bodies. In the surface of the former the particles, as they are cooled, sink, and give place to those beneath, which then are warmer, and therefore lighter, producing thus a renewal of surface, and a very slow decrease of its general temperature, compared with those of solid bodies, whose particles are motionless among themselves. When these on their surface are cooled, they remain in their place, and are affected by the superior warmth of the internal particles, only in the degree of the conducting power of the body. And this conducting power is found to be extremely feeble in most of the substances which form the solid crust of our globe.

These conditions being understood, it will be easy to imagine, that the portion of the atmosphere which reposes on the surface of water, will continue warmer after sunset on a clear night, than the contiguous parts which rest upon the adjacent land. From its position, too, with regard to an aqueous surface, it will also obtain a greater load of moisture. If we now suppose the cooled air of a superior stratum to descend in the usual manner upon the masses of air lying upon the earth and the water, which, though closely adjoining, are, with regard to heat and humidity, very differently compounded, we shall find that its descent might produce little or no visible change in the land-stratum, while, by its superior weight, it would fall into and partially displace that over the water, intimately intermixing with it, and condensing its moisture, and thus creating in the air a visible

river or lake of vapor, whose boundaries in a still night would exactly coincide with the banks of the water beneath, however irregular their outline. Mr. Harvey observed a mist of this kind hovering in a beautiful stratum over the stream which supplies Plymouth with water. The mist moved in the direction of the running stream, but with a velocity much greater, while it accommodated itself, in a most singular manner, in its course, to all the turns and windings of the channel. The breadth of the mist was nearly the same as that of the stream, and its average altitude about five feet. The water of the stream was observed to stand at 56° , the air over the water $47\frac{1}{2}^{\circ}$, the ground near the mist 45° , the air above it 49° .

The following facts also corroborate the view we have taken of the theory of the formation of mists over water. Sir H. Davy, on descending the Danube during three nights in June, 1818, observed, that the mist regularly appeared over the water in the evening, when the temperature of the air on the shore was from 3° to 6° lower than that of the stream, and that it as regularly disappeared when the temperature of the atmosphere on the banks surpassed that of the river. At six o'clock in the morning of the last day mentioned, Sir H. Davy observed, at the junction of the rivers Inn and Ilz with the Danube, the respective temperatures of the water of the three rivers, and that of the air on the land. He found them, and the existing state of the atmosphere over the waters, to be as follows:—

Temperature of the air on Land.	Temperature of the Rivers.	State of the atmosphere over the Rivers.
	62° Danube.	Thick fog on the whole breadth.
54°	56° Inn.	Dense mist ditto.
	55° Ilz.	Light mist.

This observation strikingly exhibits the precipitation in its varied proportion produced by the intermixture of the cooler air of the land with that of the floating strata of air over the rivers, at their different temperatures.

If we suppose that we have enumerated above all the causes of the formation of mists, it would be difficult to account for the fact of mists increasing in density and extent after their first formation, or for their continuance after the difference of the temperatures of the air and water had been reduced to nearly nothing. It is evident that the conditions we have mentioned are not sufficient for the production of this effect, which yet may often be observed. Sir H. Davy thinks that this increase and prolonged existence depend, not only upon the operation of the causes which originally produced them, but likewise upon heat which is evolved from the superficies of the particles of water composing the mist. This produces a descending current of cold air in the very body of the mist, whilst the warmer water continually sends up vapor. This decrease of temperature in the middle of the body of mist was remarked also by Mr. Harvey, during a dense mist, which shrouded not only over the whole of

its surface, but the adjacent country also. As the part crossed was nearly a mile in breadth, many opportunities presented themselves of remarking the temperatures of the water and the mist. The river was uniformly 53° all over its surface; on the eastern shore, and for three hundred yards across the temperature of the air was 42° ; as the middle of the river was approached, it subsided to 41° , and again gradually rose until, on the western bank, it had arrived to 48° ; the air in the fields close to the river was 42° .

A current of dry air, however, appears to have the effect of suspending all these operations, even where the relative conditions of the water and the air might be supposed to be very favorable to them. Sir H. Davy, during his Danube voyage, observed, that during a strong easterly wind no mists were formed, when the water was 61° , and the air but 54° ; a remarkable contrast to the case of the rivers Inn and Ilz before mentioned, where the difference of a degree or two only was marked by deposition. Mr. Harvey repeatedly observed this effect of dry air at Plymouth.

The peculiar odor which prevails in some fogs, has never yet been satisfactorily accounted for.

RAIN, HAIL, AND SNOW.

The water which we see descending from the clouds, in the fluid state of drops, or crystallized in snow, or congealed in hail, is in the final stage of that perpetually recurring journey, which some portion of this element is constantly performing through the atmosphere of our planet.

Lifted up, perhaps, from the surface of some remote ocean, by the process of evaporation, into the region of the winds, and subjected to a play of temperature infinitely varied, it may, by the changes of its locality, have presented its beautiful evanescent apparition to all the nations of the earth, before that junction of coincidences happened, which produced its fall at our feet. This last change, which preceded and terminated its aerial career, was but another effect of the same extensively operating cause which produces, in the transparent atmosphere, the deposition of those minute particles of water which constitute a cloud, and which, when greatly increased in energy, assembles and pours them in rain.

"The profuse precipitation of humidity which has received this appellation, is caused by a rapid commixture of opposite strata of air of different temperatures. The action of swift contending currents in the atmosphere, brings quickly into mutual contact vast fields of air over a given spot. The separation of moisture is proportionally rapid and copious; the particles conglomerate, and in temperate weather the deposition descends to the earth in the form of rain. In the cold season the aqueous globules, freezing in the mid air into icy spiculæ, collect together during their descent, and become converted, ere they reach the earth's surface, into flakes of snow. Hail is formed under different circumstances, and generally in sudden alternations of the fine season, the globules of rain being

congealed during their fall, by passing through a stratum of dry and cold air.

"The drops of rain vary in their size, perhaps from the 25th to the 100th of an inch in diameter. In parting from the clouds, they precipitate their descent till the increasing resistance opposed by the air, becomes equal to their weight, when they continue to fall with a uniform velocity. This velocity is, therefore, in a certain ratio, to the diameter of the drops; hence thunder, and other showers in which the drops are large, pour down faster than a drizzling rain. A drop of the 25th part of an inch, in falling through the air, would, when it had arrived at its uniform velocity, only acquire a celerity of $11\frac{1}{2}$ feet per second; while one of $\frac{1}{4}$ th of an inch would acquire a velocity of $33\frac{1}{2}$ feet.

"A flake of snow being, perhaps, nine times more expanded than water, would descend thrice as slow. Hail-stones are often of considerable dimensions, exceeding sometimes the length of an inch; they may, therefore, fall with a velocity of 70 feet per second, or at the rate of about fifty miles in the hour. Striking the ground with such impetuous force, it is easy to conceive the extensive injury which a hail shower may occasion in the hotter climates. The destructive power of these missiles in stripping and tearing the fruits and foliage, increases besides in a faster ratio than the momentum, and may be estimated by the square of their velocity multiplied into their mass. This fatal energy is hence as the fourth power of the diameter of the hail-stone."* The celebrated Volta referred the formation of hail to the play of electricity among the clouds, and upon this theory proposed the erection of *paragrés*, or hail-rods, in countries much exposed to the ravages of hail-storms. These, upon the same principle as lightning rods, were to consist of lofty poles tipped with metallic points, and having metallic wires communicating with the earth. By thus subtracting superabundant electricity from clouds, Volta imagined that the formation of hail would be prevented. These *paragrés* have been tried in Switzerland upon an extensive scale; but their success has not been proportionate to the expectations which were formed from a minute experiment.

The average quantity of rain which falls in the course of a year, in the neighbourhood of London, according to Mr. Daniell's observations, amounts to $23\frac{1}{3}$ inches, or, if collected, it would form a sheet of water of that depth. The registers of the rain which have been kept in various parts of the United Kingdom, have given results which have excited some doubt of their accuracy. Mr. Leslie thinks, that "in general twice as much rain falls on the western as on the eastern side of our island, and that the average annual quantity may be reckoned at 30 inches. According to this estimate, the whole discharge from the clouds in the course of a year, on

* Leslie.

every square mile of the surface of Great Britain, would, at a medium, be 1,944,633, or nearly two millions of tons. This gives about three thousand tons of water for each English acre, a quantity equal to 630,000 imperial gallons."

The contributions of the several months to the production of this quantity, are stated by Mr. Daniell, and recorded in the British Almanac, to be in the following proportions:—

January	1.483	July	2.516
February	0.746	August	1.453
March	1.440	September	2.193
April	1.786	October	2.073
May	1.853	November	2.400
June	1.830	December	2.426

The greatest average quantity, therefore, falls in July, and the smallest in February.

In comparing quantities which fall in the twenty-four hours, which constitute a day, the result of experiment shows that a greater amount of rain falls while the sun is below, than when above the horizon.

One very remarkable circumstance attending the fall of rain, is, "that smaller quantities have been observed to be deposited in high than in low situations, even though the difference of altitude should be inconsiderable. Similar observations have been made at the summit, and near the base of hills of no great elevation. Rain-gauges, placed on both sides of a hill at the bottom, always indicate a greater fall of rain than on the exposed top."*

If the whole of the waters which fall from the heavens were to return again, the evaporation from the ground might be sufficient alone to maintain the perpetual circulation. But more than one-third of all the rains and snows are carried by the rivers into the ocean, which must hence restore this continued waste.

* Leslie.

. The Natural History of the Weather embraces the phenomena of Dew and Hoar Frost, Dryness and Moisture, Heat and Cold, Thunder and Lightning, and Winds: as well as those of Evaporation, Clouds, Fogs and Mist, and Rain, to which the present article is necessarily limited by our space. The subject will be pursued in the Almanac for 1832.

II. SHAPE OF THE EARTH, AND ITS SIZE.

THE level portions of the earth's surface seem at first view perfectly flat. But if we examine them more critically, and for a considerable extent, we shall find that they are decidedly convex, or swelled out in the middle. The light of a light-house requires to be raised, in order to be seen at any considerable distance. Let it be placed on a level with the sea, and a person of the common height, or whose eyes are less than six feet above the surface of the sea, would not be able to see it at the distance of four miles, however strong and clear the light might be. But upon raising himself higher and higher, he would at length, when his eye had reached an elevation of ten or eleven feet above the surface, be able to discern it just grazing the surface of the water. The same effect would be produced if the light were raised ten or eleven feet, and the eye of the observer were on the level of the ocean. And a light 60 or 100 feet high disappears in like manner by sinking lower and lower; only the distance at which we are required to place ourselves to produce this effect, becomes greater and greater according to the elevation of the light, and according also to our own elevation above the level of the sea. The most convenient position for a nice observation of this kind is an extended lake, when covered with smooth ice. We will suppose ourselves provided with a common leveling instrument, or any long tube capable of being fixed in an exactly horizontal position, which is easily determined by a water-level, or by being at right angles to a plumb-line. Let us suppose that the line of sight through the tube is precisely four feet from the ice, and that the tube can be turned in all directions without varying from a horizontal or level position. If we now look through the tube at an upright rod or pole placed with one end on the ice at different distances, we shall be able to establish, in the most satisfactory manner, the following important facts.

1. The line of sight, or *apparent level*, as it is called, departs from the surface of the ice, or *true level*, in whatever direction we look.

2 This departure, or *difference of level*, is the same in all directions as to the points of the compass, where the distance from the observer is the same.

3. The difference of level for a distance of one mile is 8 inches.

4. If we double any distance, the difference of level is quadrupled, and if we triple the distance, the difference of level is nine times as great, and so on, according to the law of the squares; that is, the difference of level for one mile being 8 inches, that for two miles is not twice 8, but four times 8, or 32 inches, and that for three miles is 9 times 8, or 72 inches.

Similar observations being made in other places in different parts of the earth, we arrive at essentially the same results.

The facts above given, lead to conclusions not less curious and striking.

1. The earth's surface is curved instead of being plane, or flat, and plumb-lines or lines perpendicular to the surface, are not strictly parallel, but incline more and more the further they are apart, and tend to meet at some point within.

2. The earth appears to be equally curved in all directions, and the law of the departure of the apparent from the true level, indicates a spherical surface.

3. The particular departure of 8 inches to a mile points out the dimensions of the earth, and furnishes, by means of a simple proposition in geometry, a method of calculating its diameter. Thus in the adjoining figure we have AB and BD to find AE , or BE , which does not sensibly differ from AE , since BD , by supposition, is only eight inches. It is a very familiar proposition in plane geometry, that, when from a point without a circle two lines be drawn, one cutting and the other touching it, the touching line is a mean proportional between the cutting line and the part without the circle; hence

$$BD : AB :: AB : BE \text{ or } AE \text{ very nearly;}$$

that is, 8 inches being $\frac{1}{7920}$ of a mile,

$$\frac{1}{7920} : 1 :: 1 : 7920;$$

in other words, the earth's diameter is 7920 miles. This is almost precisely what it is fixed at by the most elaborate observations and calculations. As the circumference of a circle or sphere exceeds its diameter a little more than three times ($3\frac{1}{7}$), if we multiply the above result by $3\frac{1}{7}$, we have the circumference equal to 24,890 miles.

The common way of determining the magnitude of the earth, is by measuring a certain part of its circumference in the direction of the meridian. Lake Champlain, for example, when frozen over, would furnish a proper field for such an operation. Two plumb-lines being suspended, on the same meridian, one at Crown Point and the other on the boundary line between the United States and Canada, would be found to deviate from parallelism one degree, that is, they would meet near the centre of the earth, having an inclination, or forming an angle, of one degree, or $\frac{1}{360}$ part of a circumference, and the distance between these plumb-lines being actually measured with a chain, would be the 360th part of the entire circuit of the globe. The inclination of the plumb-lines above mentioned, is the same thing as the difference of latitude of the two places, and is found by taking the altitude (or angular distance above the horizon) of the pole by means of the Pole star, or other star in the neighborhood. Portions of the earth's circumference, in various countries and regions, have been determined in this way with the greatest care and exactness, and

the final result of all these operations is very nearly what we have stated above.

But while we have thus found out the general dimensions of the earth, we have discovered that the form is not exactly that of a sphere. The length of a degree increases as we proceed from the equator toward either pole. We hence infer that the earth is flattened about the polar regions, and more convex between the tropics. The average length of a degree is $69\frac{1}{3}$ miles. But the length of a degree in latitude 66° , is about two-thirds of a mile greater than at the equator. The same phenomenon is indicated also by the pendulum. A clock which keeps correct time at the equator, is found to gain more and more as it is carried toward either pole in consequence of a quicker motion of the pendulum, resulting from a nearer approach to the centre, and a greater power of gravity.

The results of calculations founded upon observations of the pendulum agree pretty nearly with those derived from actual measurement; and the conclusion from the whole is, that the degree of flattening amounts to about $\frac{1}{306}$ of the whole diameter of the earth, that is, a line drawn through the centre of the earth, from pole to pole, is $\frac{1}{306}$ (or 26 miles) shorter than a similar line in the direction of the equator.

III. DENSITY OF THE EARTH.

Is the earth solid or hollow, and if solid, how dense is it? Would it be equivalent to so much water, or would it exceed it, and how much would it exceed it? It may seem very difficult to answer these questions, and yet they have been answered most satisfactorily. It is now abundantly proved not only that the earth is solid, but that the interior parts are more and more compact the nearer we approach to the centre, as we should naturally suppose. We are able to estimate the influence which a mountain exerts upon a plumb-line by observing how much it is drawn out of the direction of an exact perpendicular; and then, by comparing the size of the mountain with the size of the earth, knowing at the same time of what materials the mountain is composed, we are able to say how much the matter of the whole earth exceeds that of the mountain. It is thus ascertained that the matter composing the earth is about five times as dense as water, or, in other words, would weigh, under the same circumstances, five times as much as the same bulk of water. Now we know that the matter near the surface, is, for the most part, either water or earthy and stony substances, only two or three times as heavy as water. The density of the interior parts, therefore, must greatly exceed that at the surface, in order that the average may amount to five times the density of water, as is ascertained by actual observation.

It may be thought, that the above method of determining the quantity of matter in a mountain is liable to great uncertainty. It should be

known that we do not rely upon a single experiment, or even upon one single method, for so important a result. A balance has been contrived, depending upon the twisting and untwisting of an extremely fine wire suspended perpendicularly,* by which the mutual tendency (or relative weight) of two balls of lead, has been accurately estimated and compared with the force exerted by the great mass of the earth; and these delicate experiments have afforded a striking confirmation of the result above stated.

IV. TEMPERATURE OF THE INTERIOR OF THE EARTH.

THE circumstance of the earth's being flattened at the poles and protuberant at the equator, is the natural and necessary result of its rotation on its axis. But in order that it might yield to the force resulting from such a motion, the matter of which it is composed, must have been soft. Now, although water is capable of being compressed, and so far as we can judge, of taking any degree of density, according to the force exerted upon it, still the shape of the earth is not that which would have resulted from such a mass of water. There may be particular portions of the sea that extend to the depth of several miles, as there are particular points of the solid crust of continents, that rise to this height above the general level. Still we have reason to believe, that the average depth of the ocean does not much exceed three thousand feet. It is thought that heat may have been the original cause of the fluidity of the earth, and that there may still remain enough to keep the interior portions in the same state. The more this subject has been examined, the more the evidence has accumulated in favor of the position that the temperature increases as we descend below the surface. There are numerous instances in which we have been able, by means of natural or artificial excavations, to penetrate to the depth of from 1300 to 1600 feet. The general inference from all the observations made in different parts of the earth is, that there is an increase of heat amounting to about 1° of Fahrenheit for every 46 feet in depth; that at the depth of 10,000 feet the heat would be sufficient to boil water, and that at the depth of about 100 miles, or $\frac{1}{48}$ part of the distance to the centre, the heat would be intense enough to melt most of the earths and stones that are known to enter into the composition of the globe. These facts and inferences have an important bearing upon the phenomena of earthquakes and volcanoes, and open a wide field of speculation to the natural historian and geologist.

* A balance of this construction, applied to electrical forces, has been estimated to weigh to the sixty-thousandth part of a grain.

THE
AMERICAN ALMANAC.

PART II.

UNITED STATES.

I. DECLARATION OF INDEPENDENCE.

JULY 4, 1776.

[From the Journals of Congress.]

*A Declaration by the Representatives of the United States of America
in Congress assembled.*

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident :—that all men are created equal ; that they are endowed by their Creator with certain unalienable rights ; that among these are life, liberty, and the pursuit of happiness ; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed ; that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate, that governments long established should not be changed for light and transient causes ; and accordingly all experience hath shown, that mankind are more disposed to suffer while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these colonies ; and such is now the necessity which constrains them to alter their former systems of government. The history of the present king of Great Britain, is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these states. To prove this, let facts be submitted to a candid world.

He has refused his assent to laws the most wholesome and necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation, till his assent should be obtained ; and when so suspended, he has utterly neglected to attend to them. He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature ; a right inestimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved representative houses repeatedly, for opposing, with manly firmness, his invasions on the rights of the people.

He has refused, for a long time after such dissolutions, to cause others to be elected ; whereby the legislative powers, incapable of annihilation, have returned to the people at large, for their exercise ; the state remaining, in the mean time, exposed to all the dangers of invasion from without, and convulsions within.

He has endeavored to prevent the population of these States ; for that purpose obstructing the laws for naturalization of foreigners ; refusing to pass others to encourage their migrations hither, and raising the conditions of new appropriations of lands.

He has obstructed the administration of justice, by refusing his assent to laws for establishing judiciary powers.

He has made judges dependent on his will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of new offices, and sent hither swarms of officers, to harass our people, and eat out their substance.

He has kept among us, in times of peace, standing armies, without the consent of our legislatures.

He has affected to render the military independent of, and superior to, the civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitutions, and unacknowledged by our laws ; giving his assent to their acts of pretended legislation ;

For quartering large bodies of armed troops among us :

For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these states :

For cutting off our trade with all parts of the world :

For imposing taxes on us without our consent :

For depriving us, in many cases, of the benefits of trial by jury :

For transporting us beyond seas to be tried for pretended offences :

For abolishing the free system of English laws in a neighboring prov-

ince, establishing therein an arbitrary government, and enlarging its boundaries, so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies :

For taking away our charters, abolishing our most valuable laws, and altering, fundamentally, the forms of our governments :

For suspending our own legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated government here, by declaring us out of his protection, and waging war against us.

He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people.

He is, at this time, transporting large armies of foreign mercenaries to complete the works of death, desolation, and tyranny, already begun with circumstances of cruelty and perfidy, scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized nation.

He has constrained our fellow-citizens, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

He has excited domestic insurrections amongst us, and has endeavored to bring on the inhabitants of our frontiers, the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions.

In every stage of these oppressions we have petitioned for redress in the most humble terms : our repeated petitions have been answered only by repeated injury. A prince, whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

Nor have we been wanting in attentions to our British brethren. We have warned them, from time to time, of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity which denounces our separation, and hold them, as we hold the rest of mankind, enemies in war, in peace friends.

We therefore, the Representatives of the United States of America, in General Congress assembled, appealing to the Supreme Judge of the world, for the rectitude of our intentions, do, in the name and by the authority of the good people of these colonies, solemnly publish and declare, That these United Colonies are, and of right ought to be, **FREE and INDEPENDENT STATES**; that they are absolved from all allegiance to the British crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved; and that, as free and independent states,

they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent states may of right do. And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor.

JOHN HANCOCK, &c.

SIGNERS OF THE ABOVE DECLARATION OF INDEPENDENCE.

III. PRESIDENTS OF CONGRESS

from 1774 to 1788.

	<i>From</i>	<i>Elected</i>
Peyton Randolph,	Virginia,	September 5, 1774.
Henry Middleton,*	South Carolina,	October 22, 1774.
Peyton Randolph,	Virginia,	May 10, 1775.
John Hancock,	Massachusetts,	May 24, 1775.
Henry Laurens,	South Carolina,	November 1, 1777.

* Mr. Randolph, five or six days before the adjournment of Congress, was prevented from attending by ill health, and Mr. Middleton was chosen to supply his place. When the next Congress met, May 10th, 1775, Peyton Randolph was again chosen president, but being, on the 24th of the same month, obliged to return home, John Hancock was chosen to fill the vacancy.

	<i>From</i>	<i>Elected</i>	
John Jay,	New York,	December 10,	1778.
Sámuel Huntington,	Connecticut,	September 28,	1779.
Thomas M ^c Kean,*	Delaware,	July 10,	1781.
John Hanson,	Maryland,	November 5,	1781.
Elias Boudinot,	New Jersey,	November 4,	1782.
Thomas Mifflin,	Pennsylvania,	November 3,	1783.
Richard Henry Lee,	Virginia,	November 30,	1786.
Nathaniel Gorham,†	Massachusetts,	June 6,	1786.
Arthur, St.Clair,	Pennsylvania,	February 2,	1787.
Cyrus Griffin,	Virginia,	January 22,	1788.

The first Continental Congress met in Philadelphia on the 5th of September, 1774; and the first Congress under the Constitution, assembled in New York on the 3d of March, 1789.

IV. CONSTITUTION OF THE UNITED STATES.

WE, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I.

SECTION I. All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

SECTION II. [1.] The House of Representatives shall be composed of members chosen every second year by the people of the several states; and the electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislature.

[2.] No person shall be a representative who shall not have attained to the age of twenty-five years, and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state in which he shall be chosen.

[3.] Representatives and direct taxes shall be apportioned among the several states which may be included within this union, according to their respective numbers, which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons. The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent

* Samuel Johnson, of North Carolina, was previously elected, but declined accepting.

† Mr. Gorham was elected "Chairman of Congress" on the 15th of May preceding.

term of ten years, in such manner as they shall by law direct. The number of representatives shall not exceed one for every thirty thousand, but each state shall have at least one representative; and until such enumeration shall be made, the state of New Hampshire shall be entitled to choose three; Massachusetts, eight; Rhode Island and Providence Plantations, one; Connecticut, five; New York, six; New Jersey, four; Pennsylvania, eight; Delaware, one; Maryland, six; Virginia, ten; North Carolina, five; South Carolina, five; and Georgia, three.

[4.] When vacancies happen in the representation from any state, the executive authority thereof shall issue writs of election to fill such vacancies.

[5.] The House of Representatives shall choose their speaker and other officers; and shall have the sole power of impeachment.

SECTION III. [1.] The Senate of the United States shall be composed of two senators from each state, chosen by the legislature thereof, for six years; and each senator shall have one vote.

[2.] Immediately after they shall be assembled, in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of the senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year, so that one third may be chosen every second year; and if vacancies happen by resignation, or otherwise, during the recess of the legislature of any state, the executive thereof may make temporary appointments until the next meeting of the legislature, which shall then fill such vacancies.

[3.] No person shall be a senator who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state for which he shall be chosen.

[4.] The Vice-President of the United States shall be President of the Senate, but shall have no vote, unless they be equally divided.

[5.] The Senate shall choose their other officers, and also a president pro tempore, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.

[6.] The Senate shall have the sole power to try all impeachments: when sitting for that purpose, they shall be on oath or affirmation. When the President of the United States is tried, the Chief Justice shall preside; and no person shall be convicted without the concurrence of two-thirds of the members present.

[7.] Judgment in cases of impeachment shall not extend further than to removal from office, and disqualification to hold and enjoy any office of honor, trust, or profit, under the United States; but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment, and punishment, according to law.

SECTION IV. [1.] The times, places, and manner of holding elections for senators and representatives, shall be prescribed in each state by the legislature thereof; but the Congress may at any time, by law, make or alter such regulations, except as to the places of choosing senators.

[2.] The Congress shall assemble at least once in every year, and such meeting shall be on the first Monday in December, unless they shall by law appoint a different day.

SECTION V. [1.] Each House shall be the judge of the elections, returns, and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members, in such manner and under such penalties as each House may provide.

[2.] Each House may determine the rules of its proceedings, punish its members for disorderly behavior, and with the concurrence of two-thirds, expel a member.

[3.] Each House shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may, in their judgment, require secrecy; and the yeas and nays of the members of either House on any question, shall, at the desire of one-fifth of those present, be entered on the journal.

[4.] Neither House, during the session of Congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two Houses shall be sitting.

SECTION VI. [1.] The senators and representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the treasury of the United States. They shall in all cases, except treason, felony, and breach of the peace, be privileged from arrest during their attendance at the session of their respective Houses, and in going to and returning from the same; and for any speech or debate in either House, they shall not be questioned in any other place.

[2.] No senator or representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States, which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the United States, shall be a member of either House during his continuance in office.

SECTION VII. [1.] All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills.

[2.] Every bill which shall have passed the House of Representatives and the Senate, shall, before it become a law, be presented to the President of the United States: if he approve, he shall sign it; but if not, he shall return it, with his objections, to that House in which it shall have originated, who shall enter the objections at large on their journal,

and proceed to reconsider it. If, after such reconsideration, two-thirds of that House shall agree to pass the bill, it shall be sent, together with the objections, to the other House, by which it shall likewise be reconsidered, and if approved by two-thirds of that House, it shall become a law. But in all such cases, the votes of both Houses shall be determined by yeas and nays; and the names of the persons voting for and against the bill, shall be entered on the journal of each House respectively. If any bill shall not be returned by the President within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law, in like manner as if he had signed it, unless the Congress by their adjournment prevent its return, in which case it shall not be a law.

[3.] Every order, resolution, or vote, to which the concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and before the same shall take effect, shall be approved by him, or being disapproved by him, shall be repassed by two-thirds of the Senate and House of Representatives, according to the rules and limitations prescribed in the case of a bill.

SECTION VIII. The Congress shall have power—

[1.] To lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defence and general welfare of the United States; but all duties, imposts, and excises, shall be uniform throughout the United States:

[2.] To borrow money on the credit of the United States:

[3.] To regulate commerce with foreign nations, and among the several states, and with the Indian tribes:

[4.] To establish an uniform rule of naturalization, and uniform laws on the subject of bankruptcies throughout the United States:

[5.] To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures:

[6.] To provide for the punishment of counterfeiting the securities and current coin of the United States:

[7.] To establish post-offices and post-roads:

[8.] To promote the progress of science and useful arts, by securing, for limited times, to authors and inventors the exclusive right to their respective writings and discoveries:

[9.] To constitute tribunals inferior to the supreme court:

[10.] To define and punish piracies and felonies committed on the high seas, and offences against the law of nations:

[11.] To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water:

[12.] To raise and support armies; but no appropriation of money to that use shall be for a longer term than two years:

[13.] To provide and maintain a navy:

[14.] To make rules for the government and regulation of the land and naval forces :

[15.] To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions :

[16.] To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the states respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress :

[17.] To exercise exclusive legislation in all cases whatsoever, over such district (not exceeding ten miles square) as may by cession of particular states, and the acceptance of Congress, become the seat of the government of the United States ; and to exercise like authority over all places purchased by the consent of the legislature of the state in which the same shall be, for the erection of forts, magazines, arsenals, dock-yards, and other needful buildings :—And

[18.] To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the government of the United States, or in any department or officer thereof.

SECTION IX. [1.] The migration or importation of such persons as any of the states now existing shall think proper to admit, shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight ; but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person.

[2.] The privilege of the writ of *habeas corpus* shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

[3.] No bill of attainder or *ex post facto* law shall be passed.

[4.] No capitation or other direct tax shall be laid, unless in proportion to the *census* or enumeration herein before directed to be taken.

[5.] No tax or duty shall be laid on articles exported from any state.

[6.] No preference shall be given by any regulation of commerce or revenue to the ports of one state over those of another : nor shall vessels bound to, or from, one state, be obliged to enter, clear, or pay duties in another.

[7.] No money shall be drawn from the treasury, but in consequence of appropriations made by law ; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

[8.] No title of nobility shall be granted by the United States : and no person holding any office of profit or trust under them, shall, without the consent of the Congress, accept of any present, emolument, office, or title of any kind whatever, from any king, prince, or foreign state.

SECTION X. [1.] No state shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make any thing but gold and silver coin a tender in payment of debts; pass any bill of attainder, *ex post facto* law, or law impairing the obligation of contracts; or grant any title of nobility.

[2.] No state shall, without the consent of the Congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws; and the net produce of all duties and imposts, laid by any state on imports or exports, shall be for the use of the treasury of the United States; and all such laws shall be subject to the revision and control of the Congress.

[3.] No state shall, without the consent of the Congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another state, or with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

ARTICLE II.

SECTION I. [1.] The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of four years, and, together with the Vice-President, chosen for the same term, be elected as follows:

[2.] Each state shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of senators and representatives to which the state may be entitled in the Congress: but no senator or representative, or person holding an office of trust or profit under the United States, shall be appointed an elector.

[3. The electors shall meet in their respective states and vote by ballot for two persons, of whom one at least shall not be an inhabitant of the same state with themselves. And they shall make a list of all the persons voted for, and of the number of votes for each; which list they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate. The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted. The person having the greatest number of votes shall be the President, if such number be a majority of the whole number of electors appointed; and if there be more than one who have such majority, and have an equal number of votes, then the House of Representatives shall immediately choose by ballot one of them for President; and if no person have a majority, then from the five highest on the list, the said House shall in like manner choose the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote: A quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. In every case, after the choice of the President, the person having the greatest number of votes of the electors shall be the Vice-President. But if there should remain two or more who have equal votes, the Senate shall choose from them by ballot the Vice-President.]*

* This clause is annulled. See Amendments, Art. 12.

[3.] The Congress may determine the time of choosing the electors, and the day on which they shall give their votes ; which day shall be the same throughout the United States.

[4.] No person, except a natural born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President ; neither shall any person be eligible to that office who shall not have attained to the age of thirty-five years, and been fourteen years a resident within the United States.

[5.] In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice-President, and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice-President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected.

[6.] The President shall, at stated times, receive for his services a compensation, which shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

[7.] Before he enter on the execution of his office, he shall take the following oath or affirmation :—" I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States."

SECTION II. [1.] The President shall be commander-in-chief of the army and navy of the United States, and of the militia of the several states when called into the actual service of the United States ; he may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offences against the United States, except in cases of impeachment.

[2.] He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the senators present concur ; and he shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers, and consuls, judges of the supreme court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law : but the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments.

[3.] The President shall have power to fill up all vacancies, that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session.

SECTION III. He shall, from time to time, give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both Houses, or either of them, and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

SECTION IV. The President, Vice-President, and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.

ARTICLE III.

SECTION I. The judicial power of the United States shall be vested in one supreme court, and in such inferior courts as the Congress may, from time to time, ordain and establish. The judges, both of the supreme and inferior courts, shall hold their offices during good behavior, and shall, at stated times, receive for their services, a compensation, which shall not be diminished during their continuance in office.

SECTION II. [1.] The judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority;—to all cases affecting ambassadors, other public ministers, and consuls;—to all cases of admiralty and maritime jurisdiction;—to controversies to which the United States shall be a party;—to controversies between two or more states;—between a state and citizens of another state;—between citizens of different states;—between citizens of the same state claiming lands under grants of different states, and between a state or the citizens thereof, and foreign states, citizens, or subjects.

[2.] In all cases affecting ambassadors, other public ministers, and consuls, and those in which a state shall be party, the supreme court shall have original jurisdiction. In all the other cases before mentioned, the supreme court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations, as the Congress shall make.

[3.] The trial of all crimes, except in cases of impeachment, shall be by jury; and such trial shall be held in the state where the said crimes shall have been committed; but when not committed within any state, the trial shall be at such place or places as the Congress may by law have directed.)

SECTION III. [1.] Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort.

[2.] No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

[3.] The Congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood, or forfeiture, except during the life of the person attainted.

ARTICLE IV.

SECTION I. Full faith and credit shall be given in each state to the public acts, records, and judicial proceedings of every other state. And the Congress may, by general laws, prescribe the manner in which such acts, records, and proceedings shall be proved, and the effect thereof.

SECTION II. [1.] The citizens of each state shall be entitled to all privileges and immunities of citizens in the several states.

[2.] A person charged in any state with treason, felony, or other crime, who shall flee from justice, and be found in another state, shall, on demand of the executive authority of the state from which he fled, be delivered up, to be removed to the state having jurisdiction of the crime.

[3.] No person held to service or labor in one state, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

SECTION III. [1.] New states may be admitted by the Congress into this union: but no new state shall be formed or erected within the jurisdiction of any other state; nor any state be formed by the junction of two or more states, or parts of states, without the consent of the legislatures of the states concerned, as well as of the Congress.

[2.] The Congress shall have power to dispose of and make needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States, or of any particular state.

SECTION IV. The United States shall guarantee to every state in this Union a republican form of government, and shall protect each of them against invasion; and on application of the legislature, or of the executive (when the legislature cannot be convened), against domestic violence.

ARTICLE V.

The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two-thirds of the several states, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several states, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress; provided that no amendment, which may be made prior to the year one thousand eight hundred and eight, shall in any

manner affect the first and fourth clauses in the ninth section of the first article; and that no state, without its consent, shall be deprived of its equal suffrage in the Senate.

ARTICLE VI.

[1.] All debts contracted, and engagements entered into, before the adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

[2.] This Constitution, and the laws of the United States, which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every state shall be bound thereby, any thing in the constitution or laws of any state to the contrary notwithstanding.

[3.] The senators and representatives before mentioned, and the members of the several state legislatures, and all executive and judicial officers, both of the United States and of the several states, shall be bound by oath or affirmation, to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

ARTICLE VII.

The ratification of the conventions of nine states, shall be sufficient for the establishment of this Constitution between the states so ratifying the same.

Done in convention, by the unanimous consent of the States present, the seventeenth day of September, in the year of our Lord one thousand seven hundred and eighty-seven, and of the Independence of the United States of America the twelfth. In witness whereof we have hereunto subscribed our names.

GEO. WASHINGTON, *President,*
and *Deputy from Virginia.*

New Hampshire—John Langdon, Nicholas Gilman. *Massachusetts*—Nathaniel Gorham, Rufus King. *Connecticut*—William S. Johnson, Roger Sherman. *New York*—Alexander Hamilton. *New Jersey*—William Livingston, David Brearley, William Paterson, Jonathan Dayton. *Pennsylvania*—Benjamin Franklin, Thomas Mifflin, Robert Morris, George Clymer, Thomas Fitzsimons, Jared Ingersoll, James Wilson, Gouverneur Morris. *Delaware*—George Read, Gunning Bedford, jun., John Dickinson, Richard Bassett, Jacob Broom. *Maryland*—James M'Henry, Daniel of St. Thomas Jenifer, Daniel Carroll. *Virginia*—John Blair, James Madison, jun. *North Carolina*—William Blount, Richard Dobbs Spaight, Hugh Williamson. *South Carolina*—John Rutledge, Charles Cotesworth Pinckney, Charles Pinckney, Pierce Butler. *Georgia*—William Few, Abraham Baldwin.

Attest:
WILLIAM JACKSON, *Secretary.* }

[Congress at their first session under the Constitution, held in the city of New York, in 1789, proposed to the legislatures of the several States, twelve amendments, ten of which only were adopted. They are the first ten of the following amendments; and they were ratified by three-fourths, the constitutional number, of the States, on the 15th of December, 1791. The 11th amendment was proposed at the first session of the third Congress, and was declared in a message from the President of the United States to both Houses of Congress, dated the 8th of January, 1798, to have been adopted by the constitutional number of States. The 12th amendment, which was proposed at the first session of the eighth Congress, was adopted by the constitutional number of States in the year 1804, according to a public notice by the Secretary of State, dated the 25th of September, 1804.]

AMENDMENTS

To the Constitution of the United States, ratified according to the Provisions of the Fifth Article of the foregoing Constitution.

ARTICLE I. Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the government for a redress of grievances.

ARTICLE II. A well regulated militia being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed.

ARTICLE III. No soldier shall, in time of peace, be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

ARTICLE IV. The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

ARTICLE V. No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject, for the same offence, to be twice put in jeopardy of life or limb; nor shall be compelled, in any criminal case, to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

ARTICLE VI. In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the state and dis-

strict wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defence.

ARTICLE VII. In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise re-examined in any court of the United States, than according to the rules of the common law.

ARTICLE VIII. Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

ARTICLE IX. The enumeration, in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

ARTICLE X. The powers not delegated to the United States, by the Constitution, nor prohibited by it to the States, are reserved to the states respectively, or to the people.

ARTICLE XI. The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by citizens of another state, or by citizens or subjects of any foreign state.

ARTICLE XII. The electors shall meet in their respective states, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate. The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted;—the person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers, not exceeding three, on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President, whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as Pres-

dent, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes as Vice-President, shall be the Vice-President, if such number be a majority of the whole number of electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

[Note 1. Another amendment was proposed as article XIII. at the second session of the eleventh Congress, but not having been ratified by a sufficient number of the states, has not become valid, as a part of the Constitution of the United States. It is erroneously given as a part of the Constitution, in page 74, Vol. I. Laws of the United States, published by Bioren & Duane in 1815.]

[Note 2. The Constitution, as above printed, has been carefully compared with the copy in the Laws of the United States, published by authority, and also with one in the National Calendar for the year 1826, which was copied from the roll in the Department of State.]

[Note 3. The ratification of the Constitution by the state of New Hampshire, being the 9th in order, was laid before Congress, on the 2d of July, 1788, and with the ratifications of the other states, was referred to a committee, to report an act for carrying the new system into operation. An act for this purpose was reported on the 14th of the same month, and was passed on the 13th of the September following.]

V. SUCCESSIVE ADMINISTRATIONS.

FIRST ADMINISTRATION ;—1789 to 1797 ;—8 years.

GEORGE WASHINGTON,	Virginia,	April 30, 1789.	President.
John Adams,	Massachusetts,	do. 1789.	Vice President.
<i>Appointed.</i>			
Thomas Jefferson,	Virginia,	Sept. 26, 1789.	} Secretaries of State.
Edmund Randolph,	do.	Jan. 2, 1794.	
Timothy Pickering,	Pennsylvania,	Dec. 10, 1795.	
Alexander Hamilton,	New York,	Sept. 11, 1789.	} Secretaries of the Treasury.
Oliver Wolcott,	Connecticut,	Feb. 3, 1795.	
Henry Knox,	Massachusetts,	Sept. 12, 1789.	} Secretaries of War.
Timothy Pickering,	Pennsylvania,	Jan. 2, 1795.	
James M ^c Henry,	Maryland,	Jan. 27, 1796.	
Samuel Osgood,	Massachusetts,	Sept. 26, 1789.	} Post Masters General.
Timothy Pickering,	Pennsylvania,	Nov. 7, 1791.	
Joseph Habersham,	Georgia,	Feb. 25, 1795.	
Edmund Randolph,	Virginia,	Sept. 26, 1789.	} Attorneys Gen- eral.
William Bradford,	Pennsylvania,	Jan. 27, 1794.	
Charles Lee,	Virginia,	Dec. 10, 1795.	

Speakers of the House of Representatives.

Frederick A. Muhlenberg,	Pennsylvania,	1st Congress,	1789.
Jonathan Trumbull,	Connecticut,	2d do.	1791.
Frederick A. Muhlenberg,	Pennsylvania,	3d do.	1793.
Jonathan Dayton,	New Jersey,	4th do.	1795.

SECOND ADMINISTRATION ;—1797 to 1801 ;—4 years.

JOHN ADAMS,	Massachusetts, March 4, 1797,	President.
Thomas Jefferson,	Virginia, 1797,	Vice President.
<i>Appointed.</i>		
Timothy Pickering,	Penn. (<i>continued in office.</i>)	} Secretaries of State.
John Marshall,	Virginia, May 13, 1800.	
Oliver Wolcott,	Conn. (<i>continued in office.</i>)	} Secretaries of the Treasury.
Samuel Dexter,	Massachusetts, Dec. 31, 1800.	
James M'Henry,	Md. (<i>continued in office.</i>)	} Secretaries of War.
Samuel Dexter,	Massachusetts, May 13, 1800.	
Roger Griswold,	Connecticut, Feb. 8, 1801.	} Secretaries of the Navy.
George Cabot,*	Massachusetts, May 3, 1798.	
Benjamin Stoddert,	Maryland, May 21, 1798.	} Post Master General.
Joseph Habersham,	Georgia, (<i>continued in office.</i>)	
Charles Lee,	Va. (<i>continued in office.</i>)	} Attorney General.

Speakers of the House of Representatives.

Jonathan Dayton,	New Jersey,	5th Congress.	1797.
Theodore Sedgwick,	Massachusetts,	6th Do.	1799.

THIRD ADMINISTRATION ;—1801 to 1809 ;—8 years.

THOMAS JEFFERSON,	Virginia,	March 4, 1801.	President.
Aaron Burr,	New York,	do. 1801.	} Vice Presidents.
George Clinton,	New York,	do. 1805.

--------------------	-----------	----------------	-------

Note. The dates of the appointments of the principal executive officers, in the several administrations, above exhibited, are the times when the several nominations, made by the Presidents, were confirmed by the Senate, as stated in the "Journal of the Executive Proceedings of the Senate of the United States."

* Isaac Shelby declined the appointment.

VI. EXECUTIVE GOVERNMENT.

THE term of the present administration will expire on the 3d of March, 1833.

ANDREW JACKSON,	Tennessee, <i>President</i> ,	Salary \$25,000.
JOHN C. CALHOUN,	South Carolina, <i>Vice-President</i> ,	5,000.

The following are the principal officers in the *executive departments* of the government, and all hold their offices at the will of the President.

Martin Van Buren,	New York,	<i>Secretary of State</i> ,	Salary. \$6,000.
Samuel D. Ingham,	Pennsylvania,	<i>Secretary of the Treasury</i> ,	6,000.
John H. Eaton,	Tennessee,	<i>Secretary of War</i> ,	6,000.
John Branch,	N. Carolina,	<i>Secretary of the Navy</i> ,	6,000.
William T. Barry,	Kentucky,	<i>Post Master General</i> ,	6,000.
John McP. Berrien,	Georgia,	<i>Attorney General</i> ,	3,500.

DEPARTMENT OF STATE.

The Department of State was created by an act of Congress of the 15th of September, 1789 : by a previous act of the 27th of July, 1789, it was denominated the Department of Foreign Affairs ; and it embraces what in some other governments are styled the Department of Foreign Affairs and the Home Department.

The Secretary of State conducts all treaties between the United States and Foreign Powers, and corresponds, officially, with the Public Ministers of the United States at Foreign Courts, and with the Ministers of Foreign Powers resident in the United States. He is entrusted with the publication and distribution of all the acts and resolutions of Congress, and of all treaties with Foreign Powers and Indian Tribes ; preserves the originals of all laws and treaties, and of the public correspondence growing out of the intercourse between the United States and Foreign Nations ; is required to procure and preserve copies of the statutes of the several states ; grants passports to American citizens visiting foreign countries ; preserves the evidence of copy-rights, and has control of the office which issues patents for useful inventions. He has the charge of the Seal of the United States, but cannot affix it to any commission until signed by the President, nor to any instrument or act without the special authority of the President.

Martin Van Buren, *Secretary*.

Wm. Hodgson, <i>do.</i>	1,000	R. P. Fenwick, <i>Messenger</i> ,	400

TREASURY DEPARTMENT.

The Treasury Department was created by an act of Congress of the 2d of September, 1789. The Secretary of the Treasury superintends all the fiscal concerns of the government, and upon his own responsibility, recommends to Congress measures for improving the condition of the revenue.

All the accounts of the government are finally settled at the Treasury Department; and for this purpose it is divided into the office of the Secretary (who has a general superintendence of the whole), the offices of two Comptrollers, five Auditors, a Treasurer, and a Register. The Auditors of the public accounts are empowered to administer oaths or affirmations to witnesses in any case in which they may deem it necessary for the due examination of the accounts with which they are charged.

Samuel D. Ingham, *Secretary*

GENERAL POST OFFICE.

This Department is under the superintendence of the Post Master General, who has two Assistants.

The Post Master General has the sole appointment of all the Post Masters throughout the United States, the making of all contracts for carrying the mails, and the direction of every thing relating to the Department.

The revenue arising from the General Post Office has been principally expended upon the extension and improvement of the establishment, by which means the regular conveyance, by mail, of letters, newspapers, pamphlets, &c., has been extended to the inhabitants of every part of the Union, even to the remotest territorial settlements.

NOTE.—The information relating to the *Executive government* has been derived principally from the "National Calendar," the "Register of Officers and Agents in the Service of the United States," and the "Directory of the Twenty-first Congress."

VII. THE LEGISLATURE OR CONGRESS OF THE UNITED STATES.

THE Congress of the United States consists of a Senate and House of Representatives, and must assemble, at least, once every year, on the first Monday of December, unless it is otherwise provided by law.

The Senate is composed of two members from each state; and of course the present regular number is 48. They are chosen by the legislatures of the several states, for the term of six years, one third of them being elected biennially.

The Vice-President of the United States is the President of the Senate, in which body he has only a casting vote, which is given in case of an equal division of the votes of the senators. In his absence, a President *pro tempore* is chosen by the Senate.

The House of Representatives is composed of members from the several states, elected by the people for the term of two years. The representatives are apportioned among the different states according to population; and in accordance with an act of Congress of the 3d of March, 1823, one representative is now returned for every 40,000 persons, computed according to the Constitution. The present number is 216, including 3 delegates.

Since the 4th of March, 1807, the compensation of each member of the Senate and House of Representatives, has been \$8 a day, during the period of his attendance in Congress, without deduction in case of sickness; and \$8 for every twenty miles' travel, in the usual road, in going to and returning from the seat of government. The compensation of the President of the Senate, *pro tempore*, and the Speaker of the House of Representatives, is \$16 a day.

THE TWENTY-FIRST CONGRESS.—THE SENATE.

John C. Calhoun, Vice-President of the United States, and President of the Senate.

The Senators with the expiration of their respective terms.

Samuel Chase,	Md.	Jan. 27, 1796.	John McLean,	Ohio.	March 7, 1829.
Bush. Washington,	Va.	Dec. 20, 1798.	Henry Baldwin,	Pa.	Jan. 6, 1830.
William Johnson,	S. C.	March 24, 1804.			

* Appointed by the President, July 1, 1795; nominated to the Senate Dec. 10, 1795; but not confirmed.

† Declined the appointment.

The judicial power of the United States is vested in one Supreme Court, and in such inferior courts as Congress may, from time to time, establish. The present judicial establishment of the United States, consists of a Supreme Court, thirty-one District Courts, and seven Circuit Courts, which are thus organized: the Supreme Court is composed of one Chief Justice, and six Associate Justices, who hold a court in the city of Washington, annually; besides which, each of these justices attends in a certain circuit, comprising two or more districts, appropriated to each, and, together with the judge of the district, composes a Circuit Court, which is held in each district of the circuit.

The District Courts are held, respectively, by the District Judge alone. Appeals are allowed from the District to the Circuit Courts in cases where the matter in dispute, exclusive of costs, exceeds the sum or value of fifty dollars, and from the Circuit Courts to the Supreme Court, in cases where the matter in dispute, exclusive of costs, exceeds the sum or value of two thousand dollars; and in some cases, where the inconvenience of attending a court by a justice of the Supreme Court is very great, the District Courts are invested with Circuit Court powers. Each state is one district, for the purpose of holding District and Circuit Courts therein, with the exception of New York, Pennsylvania, Virginia, Tennessee, Louisiana, and Alabama, each of which is divided into two Districts. There are, besides, Territorial Courts, which are temporary, and lose that character whenever a Territory becomes a State. In addition to the District Court for the District of Columbia, there is a Circuit Court for that District, which exercises, under the authority of Congress, common law and equity jurisdiction similar to that of the County Courts of Maryland and Virginia.

Each court has a clerk, a public attorney, or prosecutor, and a marshal; all of whom are appointed by the President of the United States, with the exception of the clerks, who are appointed by the courts. The compensation of the judges is fixed by law; that of the clerks, attorneys, and marshals, consists of fees, and in a few instances, as it regards attorneys, and marshals, of a yearly salary of about 200 dollars. It is very difficult to ascertain the amount *per annum* of the fees received in each case, as the payment of them is frequently procrastinated, and in some cases they are entirely lost. The appointments are made by the President, by and with the advice and consent of the Senate.

By an act of Congress of the 15th of May, 1820, district attorneys are to be appointed for four years only, removable at pleasure. Marshals have always held their offices for four years, removable at pleasure, in pursuance of the 27th section of an act of the 24th of September, 1789; so that the Marshals who have held their places from an earlier date, have been re-commissioned many times. The judges hold their offices during good behavior, and can be removed only on impeachment.

Tench Ringgold,	do.	<i>Marshal.</i>	

The Supreme Court of the United States has exclusive jurisdiction of all controversies of a civil nature where a state is a party, except between a state and its citizens; and except also between a state and citizens of other states, or aliens; in which latter case it has original, but not exclusive, jurisdiction. It has, exclusively, all such jurisdiction of suits or proceedings against ambassadors, or other public ministers or their domestics, or domestic servants, as a court of law can have or exercise consistently with the law of nations; and original, but not exclusive, jurisdiction of all suits brought by ambassadors, or other public ministers, in which a consul, or vice-consul, is a party. The Supreme Court has appellate jurisdiction from final decrees and judgments of the Circuit Courts in cases where the matter in dispute, exclusive of costs, exceeds the sum or value of 2,000 dollars, and from final decrees and judgments of the highest courts of the several states in certain cases, as hereinafter mentioned. It has power to issue writs of prohibition to the District Courts, when proceeding as courts of admiralty and maritime jurisdiction, and writs of *mandamus*, in cases warranted by the principles and usages of law, to any courts appointed, or persons holding office, under the authority of the United States. —The trial of issues in fact in the Supreme Court, in all actions at law against citizens of the United States, is by jury.

A final judgment or decree in any suit, in the highest court of law or equity of a state in which a decision in the suit could be had, where is drawn in question the validity of a treaty or statute of, or an authority exercised under the United States, and the decision is against their validity; or where is drawn in question the validity of a statute of, or an authority exercised under any State, on the ground of their being repugnant to the constitution, treaties, or laws of the United States, and the decision is in favor of such their validity; or where is drawn in question the construction of any clause of the constitution, or of a treaty or statute of, or commission held under the United States, and the decision is against the title, right, privilege, or exemption, specially set up or claimed by either party, under such clause of the constitution, treaty, statute, or commission; may be re-examined, and reversed or affirmed, in the Supreme Court of the United

States, upon a writ of error, the citation being signed by the Chief Justice, or Judge, or Chancellor, of the Court rendering or passing the judgment or decree complained of, or by a Justice of the Supreme Court of the United States, in the same manner, and under the same regulations, and the writ has the same effect, as if the judgment or decree complained of had been rendered or passed in a Circuit Court: and the proceeding upon the reversal is also the same, except that the Supreme Court, instead of remanding the cause for a final decision, may, at their discretion, if the cause shall have been once remanded before, proceed to a final decision of the same, and award execution. But no other error can be assigned or regarded as a ground of reversal in any such case, than such as appears on the face of the record, and immediately respects the before-mentioned questions of validity or construction of the said constitution, treaties, statutes, commissions, or authorities, in dispute.

CIRCUIT COURTS.

The Circuit Courts of the United States have original cognizance, concurrent with the courts of the several states, of all suits of a civil nature, at common law, or in equity, where the matter in dispute exceeds, exclusive of costs, the sum or value of 500 dollars, and the United States are plaintiffs or petitioners, or an alien is a party, or the suit is between a citizen of the state where the suit is brought and a citizen of another state. They have exclusive cognizance of all crimes and offences cognizable under the authority of the United States (except where the laws of the United States otherwise direct), and concurrent jurisdiction with the District Courts of the crimes and offences cognizable therein. But no person can be arrested in one district for trial in another, in any civil action, before a Circuit or District Court. No civil suit can be brought, before either of said courts, against an inhabitant of the United States, by any original process, in any other district than that whereof he is an inhabitant, or in which he shall be found at the time of serving the writ: and no District or Circuit Court has cognizance of any suit to recover the contents of any promissory note, or other *choses* in action, in favor of an assignee, unless a suit might have been prosecuted in such court to recover the said contents if no assignment had been made, except in cases of foreign bills of exchange.

The Circuit Courts have appellate jurisdiction from final decrees and judgments of the District Courts in all cases where the matter in dispute exceeds the sum or value of fifty dollars. They also have jurisdiction of certain cases, which may be removed into them before trial from the State Courts. But no District Judge (sitting in a Circuit Court) can give a vote in any case of appeal, or error, from his own decision; but may assign the reasons of such his decision.—The trial of issues in fact in the Circuit Courts in all suits, except those of equity and of admiralty and maritime jurisdiction, is by jury.

DISTRICT COURTS.

The District Courts of the United States, have, exclusively of the courts of the several states, cognizance of all crimes and offences that are cognizable under the authority of the United States, committed within their respective districts, or upon the high seas, where no other punishment than whipping, not exceeding thirty stripes, a fine not exceeding one hundred dollars, or a term of imprisonment not exceeding six months, is to be inflicted, and also have exclusive original cognizance of all civil causes of admiralty and maritime jurisdiction, including all seizures under laws of impost, navigation, or trade, of the United States, where the seizures are made on waters which are navigable from the sea by vessels of ten or more tons' burden, within their respective districts, as well as upon the high seas, saving to suitors, in all cases, the right of a common law remedy, where the common law is competent to give it; and also have exclusive original cognizance of all seizures on land or other waters than as aforesaid, made, and of all suits for penalties and forfeitures incurred, under the laws of the United States. And they also have cognizance, concurrent with

with the courts of the several states, or their circuit courts, as the case may be, of all causes where an alien sues for a *tort* only in violation of the law of nations, or a treaty of the United States. They also have cognizance, concurrent as last-mentioned, of all suits at common law, where the United States sue, and the matter in dispute amounts, exclusive of costs, to the sum or value of one hundred dollars. They also have jurisdiction, exclusively of the courts of the several states, of all suits against consuls or vice-consuls, except for offences above the description aforesaid. The trial of issues in fact, in the district courts, in all causes, except civil causes of admiralty and maritime jurisdiction, is by jury.

An act of the 18th of December, 1812, requires the district and territorial judges of the United States to reside within the districts and territories, respectively, for which they are appointed; and makes it unlawful for any judge, appointed under the authority of the United States, to exercise the profession or employment of counsel or attorney, or to be engaged in the practice of the law. And any person offending against the injunction or prohibition of this act, shall be deemed guilty of a misdemeanor.

Colombia.	Don Xavier de Medina, Consul General, New York.

X. THE ARMY.

THE military peace establishment of the United States was reduced by an act of Congress, of the 2d of March, 1821, from ten to six thousand men. The law went into operation the same year, on the first of June, and it remains unaltered. The army, as organized according to this law, is under the command of one major general and two brigadier generals; and it consists of four regiments of artillery and seven regiments of infantry, comprising of the general staff, 119, of artillery 2,240, and of infantry 3,829—total 6,188 men.

GENERAL AND PRINCIPAL STAFF OFFICERS.

Alexander Macomb,	Major General,	Chief in command.
Edmund P. Gaines,	Brigadier General,	Major Gen. Brevet.
Windfield Scott,	do.	do.
Roger Jones,	Colonel,	Adjutant General.

John E. Wool,	Colonel, Brig. Gen. Bvt.	Inspector General.
George Croghan,	Colonel,	do.
George Gibson,	Col., Br. Gen. Bvt.	Com. Gen. of Substist
Charles Gratiot,	Colonel, Brig. Gen. Bvt.	Chief Engineer.

Compensation to Officers of the Army, including Pay, Subsistence, Forage, Fuel, Quarters, and Expense for Servants.

	Per month.	Per ann.		Per month.	Per ann.
Major General,	544,58½,	6,535,00.	Maj. of Staff,	176,49½,	2,117,92.
Brigadier General,	370,12½,	4,441,50.	Major,	182,83½,	2,194,00.
Adjutant General,	269,54,	3,234,48.	Surgeon,	125,83½,	1,510,00.
Inspector General,	233,04,	2,796,48.	As't Surgeon,	102,87½,	1,228,50.
Com'y Gen. of Sub.	261,54,	3,138,48.	Capt. of Ord.	142,87½,	1,714,50.
Col. of Ordnance,	261,54,	3,138,48.	Captain,	132,87½,	1,594,50.
Lieut. Col. of Ord.	220,00,	2,640,00.	Lieut. of Ord.	115,89½,	1,390,74.
Colonel,	246,54,	2,958,48.	1st Lieutenant,	112,56½,	1,350,75.
Lieut. Colonel,	205,00,	2,460,00.	2d Lieutenant,	107,56½,	1,290,75.

XI. MILITARY ACADEMY.

THE Military Academy consists of the Corps of Engineers ; of one professor and an assistant professor of Natural and Experimental Philosophy ; one professor and an assistant professor of Mathematics ; one professor and an assistant professor of the Art of Engineering in all its branches ; a chaplain and professor of ethics ; a teacher of drawing ; a surgeon ; and a sword-master. The number of cadets is limited to two hundred and fifty. They may be attached, at the discretion of the President of the United States, as students to the military academy, and become subject to its regulations. They are arranged in companies of non-commissioned officers and privates, for the purposes of military instruction. There are four musicians to each company ; and the corps is trained and taught all the duties of a private, a non-commissioned officer, and an officer ; is encamped at least three months of each year, and instructed in all the duties incident to a regular camp. Candidates for cadets must not be under fourteen, nor above twenty-one years of age ; and each cadet, previously to his appointment by the President, must be versed in reading, writing, and arithmetic, and must sign articles, with the consent of his parent and guardian, thereby engaging to serve five years, unless sooner discharged. The pay of a cadet is sixteen dollars per month, and two rations per day. When any cadet has received a regular degree from the academic staff, after going through all

the classes, he is considered as among the candidates for a commission in any corps, according to the duties he may be judged competent to perform; and if there is not, at the time, a vacancy in such corps, he may be attached to it at the discretion of the President, by brevet of the lowest rank until a vacancy shall happen. The military academy is seated at West Point, in the State of New York, on the river Hudson. The chief engineer is, *ex officio*, inspector of the military academy.

ACADEMIC STAFF.

Sylvanus Thayer, Brevet Lieutenant Colonel, of the Corps of Engineers
Superintendent and Commandant.

David B. Douglass, A. M. *Professor of Engineering.*

Charles Mason, Brevet 2d Lieut. Corps of Engineers, *Assistant do.*

St. Louis,	18	Washington,	1828	In the Pacific.
Concord,	18	Portsmouth,	1828	Fitting out at Portsmouth.
<i>Schooners, &c.</i>				
Dolphin,	12	Philadelphia,	1821	In the Pacific.
Grampus,	12	Washington,	1821	In the West Indies.
Porpoise,	12	Portsmouth,	1820	In ordinary, at Norfolk.
Shark,	12	Washington,	1821	In the West Indies.
Fox,	3	Purchased,	1823	Used as a receiv'g ship at Balt.
Alert, (store ship)		Captured,	1812	do. Norfolk.
Sea Gull, (galliot)		Purchased,	1823	do. Phil.

The number of *Captains* in the Navy List is 37; *Masters Commandant* 33; *Lieutenants* 253.

The United States have 7 *Navy Yards*, viz. at Portsmouth, N. H., Charlestown, Mass., on Long Island near the city of New York, at Philadelphia, at Washington, at Gosport, Va., and at Pensacola.

XIII. THE CUSTOMS.

THE principal officer employed in the collection of the duties on imports and tonnage, is the Collector, to whom the Naval Officer is at once an aid and a check. The Surveyor superintends and directs the inferior officers of the customs; and all three are appointed by the President and Senate.— They formerly held their offices for an indefinite period; but, by an act of the 15th May, 1820, their appointment is now limited to four years.

Weighers, gaugers, measurers, and inspectors, are appointed by the Collector, with the approbation of the principal officer of the treasury department. For the duties of these several officers, see the act of Congress of the 2d of March, 1799. Public appraisers are authorized by an act of the 20th of April, 1818. Their business is to appraise imported goods subject to duty *ad valorem*, when they are suspected to have been invoiced below the true value. They are appointed by the President and Senate, and hold their commissions during the pleasure of the President.

XV. BANK OF THE UNITED STATES.

THE charter of the Bank of the United States was granted on the 10th of April, 1816; and it will expire on the 3d of March, 1836. The original capital amounted to \$35,000,000; and the government became a stockholder of \$7,000,000, or one fifth of the whole stock.

NICHOLAS BIDDLE of Philadelphia, *President.*
WILLIAM MCILVAINE, do. *Cashier.*

The bank is in Philadelphia; and besides the principal bank, there were in January, 1830, 22 offices of discount; namely, at Portland, Portsmouth, Boston, Providence, Hartford, New York, Buffalo, Pittsburg, Baltimore, Washington, Richmond, Norfolk, Fayetteville, Charleston, Savannah, Mobile, New Orleans, Nashville, Lexington, Louisville, Cincinnati, and St. Louis.

State of the Bank, April 1, 1830.

Notes discounted,	\$32,138,970 89.	Specie,	\$9,043,748 97.
Domestic bills discounted,	10,506,882 54.	Public deposits,	8,905,501 87.
Funded debt held by the Bank,	11,122,530 90.	Private deposits,	7,704,256 87.
Real estate,	2,891,890 75.	Circulation,	16,053,694 00.
Funds in Europe, equal to specie,	2,766,498 54.		

XVI. PUBLIC DEBT.

A TABLE showing the amount of the Public Debt of the United States, at several periods, from 1791 to 1830, reckoned on the 1st of January of the different years. [Partly from Niles's Register.]

In 1791	\$78,189,974	{	There was some increase of the Debt in each of these six years, except 1794, in which there was a reduction of it.
1796	81,642,272		
1799	77,399,909	{	The Debt was increased in consequence of the military preparations against France, before the year 1801, when Mr. Jefferson's administration commenced.
1801	82,000,167		
1803	74,781,922		
1804	86,363,643	{	The Debt was increased by the purchase of Louisiana, in 1803, for the sum of \$15,000,000. Mr. Jefferson's administration ended March 3d, 1809.
1809	86,732,379		
1810	83,166,532	{	The Debt was at its lowest amount in 1812, in Mr. Madison's administration, and before the war.
1812	46,035,123		
1813	55,907,452	{	The Debt greatly augmented by the war:—highest amount in 1816.
1816	123,016,375		
1817	116,807,805	{	Mr. Monroe's administration. Rapid reduction of the Debt since 1816, the receipts from the customs, &c. being large.
1820	91,015,566		
1821	89,987,427	{	The Debt increased in consequence of the purchase of Florida, in 1821, for the sum of \$5,000,000; and a diminution in the receipts from the customs &c. in the years 1820, 1821, &c. Mr. Monroe's administration ended in 1825.
1822	93,546,676		
1823	90,375,877		
1824	90,269,777		
1825	83,788,422		
1826	81,064,039	{	Mr. Adams's administration commenced on the 4th of March, 1825, and ended on the 3d of March, 1829.
1827	73,987,367		
1828	67,476,622		
1829	68,862,135		
1830	48,565,405	{	General Andrew Jackson's administration began on the 4th of March, 1829.

XVII. POST OFFICES AND POSTAGE.

Post Offices in 1790,	75;	Extent of Post Roads in miles	1,875.
Do. do. 1800,	903;	Do. do. do.	20,817.
Do. do. 1810,	2,300;	Do. do. do.	36,406.
Do. do. 1820,	4,500;	Do. do. do.	72,492.
Do. do. 1829,	8,004;	Do. do. do.	115,000.

RATES OF POSTAGE.

For Single Letters, composed of One Piece of Paper.

Any distance, not exceeding 30 miles,	6 cents.
Over 30, and not exceeding 80 "	10 "
Over 80, and not exceeding 150 "	12½ "
Over 150, and not exceeding 400 "	18½ "
Over 400 miles	25 "

Double Letters, or those composed of two pieces of paper, are charged with double the above rates.

Triple Letters, or those composed of three pieces of paper, are charged with triple the above rates.

Quadruple Letters, or those composed of four pieces of paper, are charged with quadruple the above rates.

All Letters, weighing one ounce *avoirdupois*, or more, are charged at the rate of single postage for each quarter of an ounce, or quadruple postage for each ounce, according to their weight; and no letter can be charged with more than quadruple postage, unless its weight exceeds one ounce *avoirdupois*.

The postage on *Ship Letters*, if delivered at the office where the vessel arrives, is six cents; if conveyed by post, two cents in addition to the ordinary postage.

Newspaper Postage.

For each Newspaper, not carried out of the state in which it is published, or if carried out of the state, but not carried over 100 miles, 1 cent.
Over 100 miles, and out of the state in which it is published, 1½ cents.

Magazines and Pamphlets.

If published periodically, dist. not exceeding 100 miles,	1½ cents p. sheet.
Ditto do. distance over 100 "	2½ " "
If not pub. periodically, dist. not exceeding 100 "	4 " "
Ditto do. distance over 100 "	6 " "

Small Pamphlets, containing not more than a half sheet royal, are charged with half the above rates. Eight pages quarto are rated as *one sheet*, and all other sizes in the same proportion.

The number of sheets in a pamphlet sent by mail must be printed or written on one of the outer pages. When the number of sheets is not truly stated, double postage is charged.

Every thing not coming under the denomination of newspapers or pamphlets, is charged with letter postage.

XXII. EXPORTS OF THE UNITED STATES IN 1829.

Summary Statement of the Value of the Exports of the Growth, Produce, and Manufacture of the United States, during the Year ending on the 30th of September, 1829.

THE SEA.			
Fisheries—			
Dried fish, or cod fisheries	\$ 747,541	
Pickled fish, or river fisheries, herring, shad, salmon, mackerel	220,527	
Whale (common) oil, and whalebone	495,163	
Spermaceti oil and candles	353,869	
THE FOREST.			\$1,817,100
Skins and furs	526,507	
Ginseng	114,396	
Product of wood—			
Staves, shingles, boards, &c.	\$1,680,403		
Oak bark, and other dye	165,406		
Naval stores, tar, pitch, rosin, and turpentine	377,613		
Ashes, pot and pearl	817,434		
AGRICULTURE.		3,040,856	
Product of Animals—			3,631,759
Beef, tallow, hides, and horned cattle	674,955		
Butter and cheese	176,205		
Pork (pickled), bacon, lard, live hogs	1,493,629		
Horses and mules	207,858		
Sheep	10,644		
Vegetable food—		2,563,291	
Wheat, flour, and biscuit	5,972,920		
Indian corn and meal	974,535		
Rye meal	127,004		
Rye, oats, and other small grain and pulse	74,896		
Potatoes	30,079		
Apples	15,958		
Rice	2,514,370		
		9,709,762	
Tobacco		12,273,053
Cotton		4,982,974
All other agricultural products—			26,575,311
Flaxseed	113,040	
Hops	6,917	
Brown sugar	3,289	
MANUFACTURES.			123,246
Soap and tallow candles	692,691	
Leather, boots, and shoes	356,658	
Saddlery	35,765	
Hats	270,780	
Wax	132,939	
Spirits from grain, beer, ale, and porter	215,494	

Wood (including coaches and other carriages)		\$ 501,946	
Snuff and tobacco		202,396	
Lead		8,417	
Linseed oil and spirits of turpentine		30,442	
Cordage		7,984	
Iron		223,705	
Spirits from molasses		166,740	
Sugar refined		50,739	
Chocolate		1,759	
Gunpowder		171,924	
Copper and brass		129,647	
Medicinal drugs		101,524	
<i>Cotton piece goods—</i>			\$3,301,550
Printed and colored	145,024		
White	981,370		
Nankeens	1,878		
Twist, yarn, and thread	3,849		
All other manufactures of	127,336		
<i>Flax and hemp—</i>		1,259,457	
Cloth and thread		2,166	
Bags, and all manufactures of		14,954	
Wearing apparel		91,108	
Combs and buttons		76,250	
Brushes		3,150	
Billiard tables and apparatus		3,443	
Umbrellas and parasols		22,067	
Leather and morocco skins, not sold, per pound		80,173	
Fire engines and apparatus		2,832	
Printing presses and types		12,908	
Musical instruments		8,868	
Books and maps		29,010	
Paper, and other stationery		23,629	
Paints and varnish		21,133	
Vinegar		5,953	
Earthen and stone ware		5,592	
Manufactures of glass		49,900	
Do. tin		1,757	
Do. pewter and lead		5,185	
Do. marble and stone		2,847	
Do. gold and silver, and gold leaf		11,250	
Gold and silver coin		612,886	
Artificial flowers and jewelry		21,627	
Molasses		1,992	
Trunks		11,248	
Brick and lime		3,717	
Salt		27,648	
<i>Articles not distinguished in returns—</i>			2,414,550
Manufactured		309,100	
Raw produce		221,544	
			530,650
		Total	\$55,700,193

XXIII. POPULATION

Of the different States and Territories, according to Four Enumerations.

States and Territories.	Pop. 1790.	Pop. 1800.	Pop. 1810.	Pop. 1820.	Increase per cent. for ten years.	Slaves. 1820.
Maine . . .	96,540	151,719	228,705	293,335	30.4	. .
N. Hampshire	141,885	183,858	214,460	244,161	13.8	. .
Vermont . .	85,539	154,465	217,895	235,764	8.2	. .
Massachusetts	378,787	422,845	472,040	523,287	10.9	. .
R. Island . .	68,825	69,122	76,931	83,059	7.9	48
Connecticut	237,946	251,002	261,942	275,248	5.1	97
New York . .	340,120	586,050	959,049	1,372,812	43.1	10,088
New Jersey	184,139	211,149	245,562	277,575	13	7,557
Pennsylvania	434,373	602,545	810,091	1,049,313	29.5	211
Delaware . .	59,094	64,273	72,674	72,749	0.1	4,509
Maryland . .	319,723	345,824	380,546	407,350	7	107,398
Virginia . .	747,610	880,200	974,622	1,065,366	9.3	425,153
N. Carolina .	393,951	478,103	555,500	638,829	15	205,417
S. Carolina .	249,073	345,591	415,115	502,741	21.1	258,075
Georgia . .	82,548	162,696	252,433	340,989	35.1	149,656
Alabama }	8,850	40,352	127,901	404	{ 41,879
Mississippi } . .				75,448		{ 32,814
Louisiana	76,556	153,407	100.3	69,064
Tennessee	105,602	261,727	420,813	61	80,107
Kentucky . .	73,677	220,959	406,511	564,317	38.8	126,732
Ohio	45,365	230,760	581,434	152	. .
Indiana	4,651	24,520	147,178	500	190
Illinois	215	12,282	55,211	351	917
Missouri	19,783	66,586	236	10,222
Michigan Ter.	. .	551	4,762	8,896	83	. .
Arkansas Ter.	1,062	14,273	1244	1,617
D. of Columb.	. .	14,093	24,023	33,039	37.6	6,377
Total . .	3,929,326	5,809,758	7,239,903	9,638,166	33.1	1,538,036

Free white inhabitants.

	Males.	Females.
Under 10 years,	1,345,220.	1,380,550.
From 10 to 16,	612,535.	605,348.
From 16 to 26,	776,150.	781,371.
From 26 to 45,	766,063.	736,600.
Over 45,	495,065.	462,788.
	3,995,053.	3,866,657.

Slaves.

Under 14 years,	343,852.	324,344.
From 14 to 26,	203,068.	202,436.
From 26 to 45,	163,723.	152,693.
Over 45,	77,365.	70,627.
	788,008.	750,160.

Free white inhabitants,
Free people of color,
Slaves,

7,861,710.
233,510.
1,538,036.

Other persons, except Ind's, not taxed, 4,631.
Foreigners not naturalized, 53,687.

Total pop. in U. S. except Indians, according to the census of 1820, } 9,631,674

TABLE showing the increase of the total population, of the slaves, and also of the free people of color, for each period of 10 years, from 1790 to 1800, from 1800 to 1810, and from 1810 to 1820.

Total pop.	Increase in 10 yrs.	Rate pr. ct.
1790 3,929,326	1790 to 1800 1,308,232	35.1
1800 5,309,558	1800 to 1810 1,830,345	36.3
1810 7,239,903	1810 to 1820 2,398,263	33.1
1820 9,638,166		

Slaves.

1790 697,696	1790 to 1800 199,153	28.7
1800 896,849	1800 to 1810 294,515	32.8
1810 1,191,364	1810 to 1820 346,672	29.1
1820 1,538,036		

Free Blacks.

1790 59,512	1790 to 1800 45,368	76.2
1800 104,880	1800 to 1810 81,566	78.8
1810 186,146	1810 to 1820 37,064	19.8
1820 223,510		

Note. The Fifth Census of the U. S. is to be completed on or before the 1st of Dec., 1830. A full account of this may be expected in the next volume of the Almanac.

XXIV. NUMBER OF INDIANS

within the United States, as estimated by the War Department.

Within		Within	
New England and Va.	- 2,573	Michigan Peninsula,	- 9,340
New York,	- 4,820	Arkansas Territory,	- 7,200
Pennsylvania,	- 300	Florida Territory,	- 4,000
North Carolina,	- 3,100	North-west or Huron Ter.	20,200
South Carolina,	- 300	Between the Mississippi and	
Georgia,	- 5,000	the Rocky Mountains, ex-	
Tennessee,	- 1,000	clusive of the states of Lou-	
Alabama,	- 19,200	isiana and Missouri, and	
Mississippi,	- 23,400	Arkansas Territory,	94,300
Louisiana,	- 939	Within the Rocky Mountains,	20,000
Ohio,	- 1,877	West of the Rocky Moun-	
Indiana,	- 4,050	tains between Lat. 44° &	
Illinois,	- 5,900	49°,	- 80,000
Missouri,	- 5,631		
<i>Total within the United States,</i>			<i>\$18,130.</i>

XXV. BENEVOLENT SOCIETIES.

NAME.	Presidents.	For- ma.	Income, 1828-9.	Income, 1829-30.
Connecticut Miss. Soc.	Hon. Jonathan Brace,	1798	\$2,070 33	\$3,013 06

			\$485,714 20	\$584,064 22

XXVI. COLLEGES IN THE

The Statements are mostly given for the Year 1830; and are

Name.	Place.	Presidents.	Found- ed.
1 Bowdoin,	Brunswick, Me.	William Allen, D. D.	1794
2 Waterville,	Waterville, do.	Jeremiah Chaplin, D. D.	1820
3 Dartmouth,	Hanover, N. H.	Nathan Lord, D. D.	1770
4 Univ. of Vermont,	Burlington, Vt.	James Marsh, A. M.	1791
5 Middlebury,	Middlebury, do.	Joshua Bates, D. D.	1800
6 Harvard University,	Cambridge, Mass.	Josiah Quincy, LL. D.	1633
7 Williams,	Williamstown, do.	Edward D. Griffin, D. D.	1793
8 Amherst,	Amherst, do.	Heman Humphrey, D. D.	1821
9 Brown University,	Providence, R. I.	Francis Wayland, D. D.	1764
10 Yale,	New Haven, Conn.	Jeremiah Day, D. D.	1700
11 Washington,	Hartford, do.	T. C. Brownell, D. D.	1826
12 Columbia,	New York, N. Y.	William A. Duer, LL. D.	1754
13 Union,	Schenectady, do.	Eliphalet Nott, D. D.	1795
14 Hamilton,	Clinton, do.	Henry Davis, D. D.	1812
15 Geneva,	Geneva, do.	R. S. Mason,	1823
16 College of N. J.	Princeton, N. J.	James Carnahan, D. D.	1746
17 Rutgers,	N. Brunswick, do.	Philip Milledoller, D. D.	1770
18 Univ. of Pennsylv.	Philadelphia, Penn.	W. H. De Lancey, D. D.	1755
19 Dickinson,	Carlisle, do.	Samuel B. How, D. D.	1783
20 Jefferson,	Canonsburg, do.	M. Brown, D. D.	1802
21 Western Unvers.	Pittsburg, do.	R. Bruce,	1820
22 Washington,	Washington, do.		1806
23 Alleghany,	Meadville, do.	Timothy Alden,	1815
24 Madison,	Union Town, do.	Henry B. Bascom,	1829
25 St. Mary's,	Baltimore, Md.	E. Damphoux, D. D.	1804
26 Columbian,	Washington, Ca.	Stephen Chapin, D. D.	1821
27 William & Mary,	Williamsburg, Va.	Adam Empie,	1693
28 Hampden Sydney,	Prince Ed. Co. do.	J. P. Cushing, A. M.	1774
29 Washington,	Lexington, do.	G. A. Baxter,	1812
30 University of Va.	Charlottesville, do.	James Madison, LL. D.	1819
31 University of N. C.	Chapel Hill, N. C.	J. Caldwell, D. D.	1791
32 Charleston,	Charleston, S. C.	Jasper Adams, D. D.	1785
33 College of S. C.	Columbia, do.	Thomas Cooper, M. D.	1801
34 Univ. of Georgia,	Athens, Ga.	Alonzo Church, D. D.	1785
35 Greenville,	Greenville, Tenn.	Henry Hoss, Esq.	..
36 Univ. of Nashville,	Nashville, do.	Phillip Lindsley, D. D.	1806
37 E. Tennessee,	Knoxville, do.	Charles Coffin, D. D.	..
38 Transylvania,	Lexington, Ken.	Alva Woods, D. D.	1798
39 Centre,	Danville, do.	Gideon Blackburn, D. D.	1822
40 Augusta,	Augusta, do.	Martin Ruter, D. D.	1823
41 Cumberland,	Princeton, do.	F. R. Cossit,	1825
42 Univers. of Ohio,	Athens, Ohio.	R. G. Wilson, D. D.	1802
43 Miami University,	Oxford, do.	R. H. Bishop, D. D.	1824
44 Western Reserve,	Hudson, do.		1826
45 Kenyon,	Gambier, do.	Phillander Chase, D. D.	1828
46 Bloomington,	Bloomington, Ind.	A. Wylie, D. D.	1828

* * There are several other colleges, besides the above, in operation or founded, as at Middletown, Conn.; Georgetown, Va.; Tuscaloosa, Al.; Washington, Miss.; New Orleans and Jackson, La.; Bardonia and Georgetown, Ken.; Jacksonville, Fl., &c.

INDIVIDUAL STATES.

I. MAINE.

THE first permanent settlement in Maine was formed about the year 1630 ; and for several years the government of the colony was administered in the name of Sir Ferdinando Gorges as proprietor of the country.

In 1652, the inhabitants of Maine were placed under the jurisdiction of Massachusetts. The country was, however, afterwards claimed by the heirs of Gorges, but was, in 1677, purchased by the colony of Massachusetts. From that time the territory formed a part of the colony and afterwards of the state of Massachusetts, and was styled, the District of Maine, till the year 1820, when it was erected into an independent state.

GOVERNORS.

Wm King, entered upon office 1820	E. Lincoln, entered upon office 1826
Albion K. Paris, do. 1821	Jonathan G. Hunton, do. 1830

OUTLINES OF THE CONSTITUTION.

The Constitution of this state was formed in 1819, and went into operation in 1820.

The legislative power is vested in a Senate and a House of Representatives, both elected annually by the people, on the second Monday in September. These two bodies are together styled *The Legislature of Maine*.

The number of representatives cannot be less than 100, nor more than 200. A town having 1,500 inhabitants is entitled to send 1 representative ; having 3,750, 2 ; 6,775, 3 ; 10,500, 4 ; 15,000, 5 ; 20,250, 6 ; 26,250, 7 ; but no town can ever be entitled to more than 7 representatives.—The number of senators cannot be less than 20, nor more than 31.

The Legislature meets (at *Portland*,—after the present year, 1831, at *Augusta*) annually, on the first of Wednesday in January.

The executive power is vested in a Governor, who is elected annually by the people, on the second Monday in September, and his term of office commences on the first Wednesday in January. A Council of seven members is elected annually on the first Wednesday in January, by joint ballot of the senators and representatives, to advise the governor in the executive part of government.

The right of suffrage is granted to every male citizen aged 21 years or upwards (excepting paupers, persons under guardianship, and Indians not taxed), having had his residence established in the state for the term of three months next preceding an election.

The judicial power is vested in a Supreme Judicial Court, and such other

courts as the legislature may, from time to time, establish. All the judges are appointed by the governor, with the advice and consent of the council; and they hold their offices during good behavior, but not beyond the age of 70 years.

Government for the Year ending December 31, 1830.

		Salary.
Jonathan G. Hunton,	<i>Governor,</i> - - - -	\$1,500
Edward Russell,	<i>Secretary of State,</i> - - - -	900

EDUCATION.

The principal literary seminaries in Maine are Bowdoin College at Brunswick; Waterville College at Waterville; the Bangor Theological Seminary at Bangor; the Gardiner Lyceum at Gardiner, which was established "for the purpose of giving to farmers and mechanics, such a scientific education as may enable them to become skilful in their professions"; the Marine Wesleyan Seminary at Readfield; and 29 incorporated academies.

Every town is required by law to raise annually, for the support of common schools, a sum equal at least to 40 cents for each person in the town, and to distribute this sum among the several school districts according to the number of scholars in each. According to the reports made in 1826, there were, in the state, 2,499 school districts; 137,931 children between the ages of 4 and 21; of which 101,325 usually attended school; the sum required by law to be annually raised, \$119,334; annual expenditure \$137,878,57.

II. NEW HAMPSHIRE.

THE earliest grant of the territory of New Hampshire was made in 1622, to John Mason and Ferdinando Gorges; and the first settlements were begun, in 1623, at Dover and Portsmouth.

In 1641, the settlements in New Hampshire voluntarily put themselves under the government of the colony of Massachusetts, and were allowed to send representatives to the General Court at Boston, till 1679, when a new government was formed, and New Hampshire was made a separate province.

In 1686, New Hampshire was placed, together with the rest of New England, under the government of Sir Edmund Andros; in 1689, the union with Massachusetts was revived, and continued till 1692. From 1699 to 1702, it was united with Massachusetts and New York; in 1702, it was again united with Massachusetts, and so continued till 1741, when a final separation took place.

GOVERNORS, &c.

Under the Royal Government.

John Cutt,	President, 1680	Walter Barefoot,	Dep. Gov. 1685
Richard Waldron,	do. 1681	Joseph Dudley,	President, 1686

William Plumer,	<i>do.</i>	1816			

OUTLINES OF THE CONSTITUTION.

A Constitution was established in 1784; and in 1792, this Constitution was altered and amended, by a convention of delegates held at Concord, and is now in force.

The legislative power is vested in a Senate and House of Representatives, which, together, are styled *The General Court of New Hampshire*.

Every town, or incorporated township, having 150 ratable polls, may send one representative; and for every 300 additional polls, it is entitled to an additional representative.

The Senate consists of 12 members, who are chosen by the people in districts.

The executive power is vested in a Governor and a Council, which consists of five members.

The governor, council, senators, and representatives are all elected annually, by the people, on the second Tuesday in March; and their term of service commences on the first Wednesday in June.

The General Court meets annually (at *Concord*) on the first Wednesday in June.

The right of suffrage is granted to every male inhabitant of 21 years of age, excepting paupers and persons excused from paying taxes at their own request.

The judiciary power is vested in a Superior Court and a Court of Common Pleas. The judges are appointed by the governor and council, and hold their offices during good behavior, but not beyond the age of 70 years.

Government for the Year ending on the first Tuesday in June, 1831.

EXECUTIVE.

EDUCATION.

New Hampshire has a college at Hanover, styled Dartmouth College, with which a medical school is connected; a small academical theological institution at New Hampton; and about 30 incorporated academies, of which the oldest and best endowed is Phillips Academy at Exeter.

Common schools are established throughout the state, and for their support a sum, amounting, each year since 1818, to \$90,000, is annually raised by a separate tax. The state has a Literary Fund amounting to \$64,000, formed by a tax of one half per cent. on the capital of the banks. The proceeds of this fund, and also an annual income of \$9,000 derived from a tax on banks, are appropriated to aid the support of schools.

III. VERMONT.

FORT DUMMER, in the southeast part of Vermont, was built in 1724; and Bennington, the oldest town in the state, was chartered in 1749, by Benning Wentworth, governor of New Hampshire.

The territory of Vermont was originally claimed both by New Hampshire and New York; and its political condition was, for a considerable time,

unsettled ; but the people preferring to have a separate government, formed a Constitution in 1777, under which a government was organized in March, 1788 ; and in 1791, Vermont was admitted into the Union.

Jonas Galusha, - -	1809		

OUTLINES OF THE CONSTITUTION.

The first Constitution of this state was formed in 1777 ; the one now in operation was adopted on the 4th of July, 1793.

The legislative power is vested in a single body, a House of Representatives, elected annually, on the first Tuesday in September, every town in the state being entitled to send one representative. The representatives meet (at *Montpelier*) annually on the second Thursday of the October succeeding their election, and are styled *The General Assembly of the State of Vermont*.

The executive power is vested in a Governor, Lieutenant Governor, and a Council of 12 persons, who are all chosen annually by the freemen on the first Tuesday in September, and their term of office commences on the second Thursday in October. They are empowered to commission all officers ; to sit as judges to consider and determine on impeachments ; to prepare and lay before the General Assembly such business as shall appear to them necessary ; and have power to revise and propose amendments to the laws passed by the House of Representatives.

The Constitution grants the right of suffrage to every man of the full age of 21 years, who has resided in the state for the space of one whole year, next before the election of representatives, and is of quiet and peaceable behavior.

The judiciary power is vested in a Supreme Court consisting of three judges ; and of a County Court of three judges for each county. The judges of the Supreme, County, and Probate Courts, sheriffs, and justices of the peace, are elected annually by the General Assembly.

A Council of Censors, consisting of 13 persons, are chosen every seven years (first elected in 1799) on the last Wednesday in March, and meet on the first Wednesday in June. Their duty is to inquire whether the Constitution has been preserved inviolate ; whether the legislative and executive

branches of government have performed their duty as guardians of the people; whether the public taxes have been justly laid and collected; in what manner the public moneys have been disposed of; and whether the laws have been duly executed.

GOVERNMENT

for the Year ending October, 1831.

Samuel O. Crafts,	of Craftsbury,	Governor,	Salary \$750
Mark Richards,		Lieut. Governor,	

Myron Clark,	Bennington	Jedediah H. Harris,	Orange
Samuel Clark,	Windham	John C. Thompson,	Chittenden
Wm. G. Hunter,	Rutland	George Worthington,	Washington
Robert Pierpoint,	do.	Benj. F. Deming,	Caledonia
Henry F. Jones,	Windsor	James Davis,	Franklin
Ezra Hoyt,	Addison	Ira H. Allen,	Orleans

Norman Williams	of Woodstock,	Secretary of State,	Salary. \$450
Benjamin Swan	do.	Treasurer of the State,	400

Robert B. Bates,	<i>Speaker of the House of Representatives.</i>		
Timothy Merrill,	<i>Clerk of the Assembly.</i>	Salary	\$375.

The Counsellors and Representatives receive \$1.50 a day, during attendance, and six cents a mile for travel in going and returning. The Lieut. Governor and Speaker of the House receive \$2.50 a day.

JUDICIARY.

Judges of the Supreme Court.

Titus Hutchinson,	Chief Justice,	-	-	Salary. \$1,050
Charles K. Williams,	Assistant Justice,	-	-	1,050
Stephen Royce,	do.	-	-	1,050
Ephraim Paddock,	do.	-	-	1,050
John C. Thompson	do.	-	-	1,050

The Supreme Court is a court for the determination of questions of law and petitions, and other matters not triable by jury. Each Judge receives, in addition to his salary, \$125 *per annum*, for preparing reports of the decisions of the Supreme Court, to be published by the state.

The Legislature appoints annually two assistant judges in each county, who, with one judge of the Supreme Court, compose the County Court. The County Court has original and exclusive jurisdiction in cases triable by

jury, where the matter or thing in question exceeds the value of one hundred dollars; and in some cases where smaller damages are claimed. The assistant judges of this court have no salaries, but are paid by fees, which vary probably from \$50 to \$250 per annum, according to the amount of business done in the thirteen different County Courts.

BANKS IN VERMONT.

The several items are taken from the Report submitted to the Legislature, October 13, 1829.

* The Bank of the United States has an Office of Discount and Deposit at *Burlington*.

EDUCATION.

There are two colleges in Vermont, at Burlington and Middlebury; medical schools at Burlington and Castleton; and about 20 incorporated academies in the state, where young men may be fitted for college.

Common schools are supported throughout the state. The money raised by the general law for the support of schools, at 3 per cent. on the Grand List [the valuation for taxes], would be about \$51,119 42; and about as much more is supposed to be raised by school district taxes. The state has a Literary Fund, derived principally from a tax of 6 per cent. on the annual profits of the banks; the amount on loan in September, 1829, was \$23,763 32.

IV. MASSACHUSETTS.

THE territory of Massachusetts comprised, for many years after its first settlement, two separate colonies, styled the *Plymouth Colony* and the *Colony of Massachusetts Bay*.

The first English settlement that was made in New England, was formed by 101 persons who fled from religious persecution in England, landed at Plymouth on the 22d of December, 1620, and laid the foundation of Plymouth Colony.

The settlement of the Colony of Massachusetts Bay was commenced at Salem in 1628. Boston was settled in 1630.

The two colonies continued separate and elected their own governors annually till 1685-6, when they were deprived of their charters, and were placed under the government of Joseph Dudley, and afterwards of Sir Edmund Andros. In 1692, they were united into one colony under a new charter; and the governors were afterwards appointed by the king.

GOVERNORS.

Colonial Governors elected annually by the People.

<i>Plymouth Colony.</i>			<i>Colony of Massachusetts Bay.</i>		
John Carver,	<i>elected</i>	1620	John Winthrop,	<i>elected</i>	1630

Caleb Strong,	<i>do.</i>	1800	Levi Lincoln,	<i>do.</i>	1825
James Sullivan,	<i>do.</i>	1807			

OUTLINES OF THE CONSTITUTION.

The Constitution of this state was formed in 1780, and amended in 1821.

The legislative power is vested in a Senate and House of Representatives, which together are styled *The General Court of Massachusetts*.

The members of the House of Representatives are elected annually in May; and they must be chosen ten days at least before the last Wednesday of that month. Every corporate town having 150 ratable polls may elect one representative, and another for every additional 225 ratable polls.

The Senate consists of 40 members, who are chosen, by districts, annually, on the first Monday in April.

The supreme executive magistrate is styled *The Governor of the Commonwealth of Massachusetts*, and has the title of "*His Excellency*." The Governor is elected annually by the people on the first Monday of April, and at the same time a Lieutenant Governor is chosen, who has the title of "*His Honor*." The Governor is assisted in the executive part of government by a Council of nine members, who are chosen by the joint ballot of the Senators and Representatives, from the Senators; and in case the persons elected, or any of them, decline the appointment, the deficiency is supplied from among the people at large.

The General Court meets (at *Boston*) on the last Wednesday of May, and also in January.

The right of suffrage is granted to every male citizen, 21 years of age and upwards (excepting paupers and persons under guardianship), who has resided within the commonwealth one year, and within the town or district

in which he may claim a right to vote, six calendar months next preceding any election, and who has paid a state or county tax, assessed upon him within two years next preceding such election; and also every citizen who may be by law exempted from taxation, and who may be, in all other respects qualified as above mentioned.

The judiciary is vested in a Supreme Court, a Court of Common Pleas, and such other courts as the Legislature may establish. The judges are appointed by the Governor by and with the advice and consent of the Council, and hold their offices during good behavior.

Government for the Year ending on the last Tuesday in May, 1831.

-------------------	-----	---------------	-------

1. *Justices of the Peace* have *original* and *exclusive* jurisdiction in all *civil* cases in which the debt or damages demanded do not exceed \$20, except where the title to real estate comes in question. They have *concurrent criminal* jurisdiction as to breaches of the peace, not aggravated in their nature, and in cases of larceny, where the goods stolen do not exceed the value of \$5.

2. The *Court of Common Pleas* has *appellate* jurisdiction in all *civil* and *criminal* cases tried originally before a justice of the peace. It has *original* and *exclusive* jurisdiction in all *civil, common-law* cases, where the debt or damage demanded exceeds the sum of \$20; and *final* jurisdiction where the damages demanded do not exceed \$100. Its *criminal* jurisdiction depends generally on particular statutes. In relation to offen-

ces at common law, its jurisdiction includes every thing, where the punishment does not extend to life, member, or banishment, except where the punishment is, by statute, to be administered by the Supreme Court. In case of mortgages and forfeitures annexed to contracts, this court has a *concurrent chancery jurisdiction*.

3. The *Supreme Judicial Court* has *appellate jurisdiction* in all civil cases where the debt or damage exceeds \$100, and in all criminal cases originally tried in the Court of Common Pleas or the Municipal Court of the city of Boston. It has *concurrent jurisdiction* in all *criminal cases* cognizable by the inferior courts, and *original and exclusive jurisdiction* in all *capital cases*. It has also *original and exclusive jurisdiction* in all cases of *alimony and divorce*; and *chancery powers* in cases of *trusts, specific performance of contracts in writing, mortgages, settlement of partnership accounts, waste, nuisance, and forfeitures annexed to contracts*. It is the *Supreme Court of Probate*, entertains appeals from the Probate Courts of the counties, and has a general superintending power over all inferior tribunals by *writ of error, certiorari, quo warranto, &c.*

4. The *Probate Courts*, of which there is one in each county, consisting of a single judge, have *original and exclusive jurisdiction* in the probate of wills, settlement of estates, and guardianship of minors, idiots, lunatics, &c.

5. There is, in Boston, a court consisting of three justices, styled the *Police Court* for the city of Boston, and a *Justices' Court* for the county of Suffolk, which has the same *civil jurisdiction* as justices of the peace in other counties, and the same *criminal jurisdiction* as justices of the peace, *concurrently with the Municipal Court*.

6. There is also in Boston a *Municipal Court*, consisting of one judge, which has cognizance of all crimes, not capital, committed within the county of Suffolk, and *appellate jurisdiction* in all criminal cases tried before the Police Court.

EDUCATION.

The principal literary institutions are Harvard University in Cambridge, connected with which there are medical, theological, and law schools; Williams College at Williamstown; Amherst College at Amherst; Massachusetts Medical College in Boston connected with Harvard University; Berkshire Medical Institution connected with Williams College; the Theological Seminaries at Andover and Newton; Round Hill School at Northampton, Berkshire Gymnasium at Pittsfield, and Mount Pleasant Classical Institution at Amherst. There are also 56 incorporated academies, of which Phillips Academy at Andover, the oldest and best endowed, was incorporated in 1780, and has educated 2,025 scholars.

Common schools are well supported throughout the state. The laws require that every town or district, containing 50 families, shall be provided with a school or schools equivalent in time to six months for one school in a year; containing 100 families, 12 months; 150 families, 18 months; and the several towns in the state are authorized and directed to raise such sums of money as are necessary for the support of the schools, and to assess and collect the money in the same manner as other town taxes. Each town is also required to choose annually a school committee of 3, 5, or 7 persons, to take the general charge and superintendence of the public schools.

According to the report of the school committee of Boston, in November, 1829, the number of public schools in that city was 80; pupils 7,430; expense for tuition, fuel, &c. \$52,500; the estimated rent of school houses, \$10,000; making the whole expense amount to \$62,500. Private schools in the city, 155; pupils 4,018; expense of tuition \$107,702. Total number of schools 235; pupils 11,448; expense for tuition, fuel, books, &c. \$196,829 25.

V. RHODE ISLAND.

THE settlement of this state was commenced at Providence, in 1636, by the celebrated *Roger Williams*, a minister who was banished from Massachusetts on account of his religious opinions; and in 1638, the settlement of the island of Rhode Island was begun by *William Coddington*, *John Clarke*, and others.

In 1643, Mr. Williams went to England, and obtained, in 1644, a Charter, by which the settlement of *Rhode Island and Providence Plantations*

were united under one government, and which continued in force till 1683, when a new Charter was granted by Charles II., which has ever since formed the basis of the government.

Government.

The government of this state is founded on the provisions of the Charter granted to the colony by Charles II., in 1663; and this is the only state in the Union which is without a written Constitution.

The legislative power is vested in a *General Assembly*, consisting of a Senate and a House of Representatives.

The House of Representatives consists of 72 members, 6 from Newport, 4 from each of the towns of Providence, Portsmouth, and Warwick, and two from each of the other towns in the State; and they are elected semi-annually in April and August.

The Senate consists of 10 members, who are elected annually in April.

The executive power is vested in a Governor, who is elected annually in April. A Lieutenant Governor is also elected, on whom the executive duties devolve in case of the office of governor being vacated.

The General Assembly meets four times a year; at *Newport* on the first Wednesday in May (the commencement of the political year), and by adjournment, at the same place, in June. It meets on the last Wednesday in October, alternately at *Providence* and *South Kingston*; and by adjournment, in January, at *East Greenwich*, *Bristol*, or *Providence*.

The judges are appointed annually by the General Assembly.

Government for the Year ending on the first Tuesday in May, 1831.

		Salary.
James Fenner	Governor,	\$ 400
Charles Collins,	Lieutenant Governor,	200
Henry Bowen,	Secretary of State,	750 & fees.
Thomas G. Pitman,	Treasurer,	450
Albert C. Greene,	Attorney General,	Fees.

Senators.

Nathan Brown,	Isaac Parker,	Thomas Remington.
John D'Wolf,	Jeremiah M. Potter,	Edward Barber.
Noel Freeborn,	George Hawkins,	George Field.

Each of the senators and representatives receives \$1,50 a day during the session of the Assembly.

Supreme Court.

		Salary.
Samuel Eddy,	Chief Justice,	\$650
Charles Brayton,	Associate Justice,	550
Samuel Randall,	do.	550

There are Courts of Common Pleas established in the several counties. The judges of these courts have no salary, but are paid by entries.

* The Bank of the United States has an Office of Discount and Deposit at Providence.

EDUCATION.

Brown University is situated at Providence; at the same place there is a seminary styled the Friends' Boarding School; and there are 8 or 10 academies in the state. Increasing attention has of late been paid to education, and the state now pays annually, for the support of free schools, the sum of \$10,000, which is divided among the several towns according to population.

VI. CONNECTICUT.

THE territory of Connecticut originally comprised two colonies, the *Colony of Connecticut*, and the *Colony of New Haven*.

The settlement of Hartford, in the colony of Connecticut, was commenced by emigrants from Massachusetts, in 1635; and that of New Haven, in 1638, by emigrants from England.

In 1662, a Charter was granted by Charles II., with ample privileges, uniting the colonies of Connecticut and New Haven under one government; but the colony of New Haven refused, for some time, to accept the Charter, and the union did not take place till 1665.

The Charter was suspended, in 1687, by Sir Edmund Andros; but it was restored again after the Revolution of 1688 in England; and it formed the basis of the government till 1818.

OUTLINES OF THE CONSTITUTION.

The Charter granted in 1662 by Charles II., formed the basis of the government of Connecticut till 1818, when the present Constitution was framed.

The legislative power is vested in a Senate and House of Representatives, which together are styled the *General Assembly*.

The members of the House of Representatives are chosen by the different towns in the state: the more ancient towns, the majority of the whole number, send each two representatives; the rest only one each. The present number is 208.

The Senate must consist of not less than 18, nor more than 24 members, who are chosen by districts. The present number is 21.

The executive power is vested in a Governor. A Lieutenant Governor is also chosen, who is President of the Senate, and on whom the duties of the governor devolve in case of his death, resignation, or absence.

The representatives, senators, governor, and lieutenant governor are all elected annually by the people on the first Monday in April.

The General Assembly has one stated session every year, on the first Wednesday in May, alternately at Hartford (1831) and at New Haven (1832.)

“ Every white male citizen of the United States, who shall have gained a settlement in this state, attained the age of 21 years, and resided in the town in which he may offer himself to be admitted to the privilege of an elector, at least six months preceding, and have a freehold estate of the yearly value of seven dollars, in this state; or having been enrolled in the militia, shall have performed military duty therein for the term of one year next preceding the time he shall offer himself for admission, or being liable thereto, shall have been, by authority of law, excused therefrom; or shall

have paid a state tax within the year next preceding the time he shall present himself for such admission, and shall sustain a good moral character, shall, on his taking such an oath as may be prescribed by law, be an elector."

The judicial power is vested in a Supreme Court of Errors, a Superior Court, and such inferior courts as the General Assembly may, from time to time, establish. The judges are appointed by the General Assembly; and those of the Supreme and Superior Courts hold their offices during good behavior; but not beyond the age of 70 years.

No person is compelled to join, or support, or to be classed with, or associated to any congregation, church, or religious association. But every person may be compelled to pay his proportion of the expenses of the society to which he may belong: he may, however, separate himself from the society by leaving a written notice of his wish with the clerk of such society.

Government for the Year ending on the first Tuesday in May, 1831.

Gideon Tomlinson,	Governor,	Salary. \$1,100
John S. Peters,	Lieutenant Governor,	300
Isaac Spencer,	Treasurer,	1,000
Thomas Day,	Secretary,	84 & fees.
Elisha Phipps,	Comptroller,	1,000
Seth P. Beers,	Commissioner of the School Fund,	1,250

The pay of the senators is \$2 a day each, during the session of the legislature, and of the representatives \$1,50 a day; and both receive 9 cents a mile for travel. The Speaker of the House of Representatives receives \$2,50 a day.

JUDICIARY.

Supreme Court of Errors.

Stephen T. Hosmer,	Chief Justice,	Salary. \$1,100
John T. Peters,	Associate Justice,	1,050
David Daggett,	do.	1,050
Thomas S. Williams.	do.	1,050
Clark Bissel,	do.	1,050
Thomas Day,	Reporter,	350

The Supreme Court of Errors is composed of the five judges, and is held in each of the eight counties.

The Superior Court is a court held in each of the counties by one of the judges of the Supreme Court.

There is also a County Court in each county, composed of a chief judge and two associate judges, who are appointed annually by the legislature. The chief judges of these courts receive \$3,50 a day, and the associate judges \$3 a day, during the session of the court, and 9 cents a mile for travel.

EDUCATION.

The colleges in Connecticut are Yale College, at New Haven, which has connected with it medical, theological, and law schools; Washington College, at Hartford; and Wesleyan College or University, recently founded at Middletown. At Hartford is the American Asylum for the Education of the Deaf and Dumb; and there are other respectable literary seminaries and academies at New Haven, Hartford, and various other places.

This state possesses an important School Fund, which was derived from the sale of lands, reserved by Connecticut, in the state of Ohio, and which amounted on the 1st of April, 1829, to \$1,882,261 68. The income of this Fund is appropriated to the support of primary schools. In the year ending March 31, 1829, the sum of \$72,161 15 was divided among the different free schools throughout the state. The number of children between the ages of 4 and 16, in 1828, was 84,899; and the dividends amounted to 85 cents to each child.

VII. NEW YORK.

THE settlement of this state was commenced by the Dutch, in 1614, who named the country *New Netherlands*, and established a colonial government in 1629. In 1664, Charles II. of England granted to his brother, the Duke of York, a patent for a large tract of country, forming the present states of New York and New Jersey; and during the same year, Colonel Nicolls, with a considerable force, in the service of the Duke, made a conquest of the country; and the name of *New Netherlands* was afterwards changed to *New York*. In 1673, the colony was recaptured by the Dutch, and held by them a few months; but, with the exception of this short period, it was in the possession of the English from 1664 till the American Revolution, in 1775.

DUTCH GOVERNORS.

OUTLINES OF THE CONSTITUTION.

The present Constitution of the state of New York was formed in 1821.

The executive power is vested in a Governor, who is elected by the people every two years; and at the same time, a Lieutenant Governor is also chosen, who is President of the Senate, and on whom, in case of the impeachment, resignation, death, or absence of the Governor from office, the powers and duties of Governor devolve.

The legislative power is vested in a Senate of 32 members, who are chosen for four years, and an Assembly, of 128 members, who are elected annually; and these bodies united are styled the *Legislature*.

For the election of the senators, the state is divided into eight districts, each being entitled to choose four senators, one of whom is elected every year. The members of the Assembly are chosen by counties, and are apportioned according to population.

The election of governor, lieutenant governor, senators, and members of the Assembly, is held at such time in the month of October or November, as the legislature may by law provide.

* Martin Van Buren was governor from January 1 to March, 1829, when he resigned the office, on being appointed Secretary of State for the United States.

The political year commences on the first day of January ; and the legislature meets annually (at *Albany*) on the first Tuesday in January, unless a different day is appointed by law.

The Constitution grants the right of suffrage, in the election of public officers, to every white male citizen, of the age of 21 years, who has been an inhabitant of the state one year next preceding any election, and, for the preceding six months, a resident in the county where he may offer his vote ; but no man of color is entitled to vote unless he is possessed of a freehold estate of the value of 250 dollars, without any incumbrance.

The chancellor and judges are appointed by the Governor, with the consent of the Senate. The chancellor and justices of the Supreme and Circuit Courts hold their offices during good behavior, or until they attain the age of 60 years. The judges of the County Courts, or Courts of Common Pleas, are appointed for a term of five years.

EXECUTIVE.

Total		761		1,229

Number of *Attorneys and Counsellors* in the state, in 1820, 1,248; in 1829, 1,686.

EDUCATION.

The principal literary seminaries in this state are Columbia College, in the city of New York; Union College, at Schenectady; Hamilton College, at Clinton; Geneva College, at Geneva; the Medical Colleges in New York city and at Fairfield; the Theological Seminaries in New York city, at Auburn, Hartwick, and Hamilton; the Polytechny, at Chittenango; the Albany Academy, and about 50 other academies.

A statute of this state makes it the duty of the Superintendent of Common Schools, to present to the Legislature an annual report, containing a statement of the condition of the schools, estimates and accounts of the expenditures of the school moneys, plans for improvements, &c.

The Report presented to the Legislature by the Superintendent, in January, 1830, contains the following statements, namely; that the School Fund belonging to the state then amounted to \$1,661,031-24 in stocks and other securities, and 869,178 acres of land; that the revenue actually received into the treasury, on account of this fund, in 1829, was \$94,626-25; that there were, in the several towns in the state, 8,872 school districts, and of this number 8,292 had complied with the conditions of the statute, by having schools kept at least three months by an inspected teacher, and by making returns to the commissioners; that there were in the districts, from which reports had been received, 468,257 children over 5 and under 16 years of age; and that in the common schools of the same districts 480,041

scholars had been taught during the preceding year; that 8,292 schools had been kept open for the reception of scholars an average period of 8 months out of the 12; that during the year 1829, \$214,840·14 had been paid to the several school districts which had made reports, of which sum \$190,000 were paid from the state treasury, \$102,934·66 were raised by a tax upon the several towns, and \$11,905·48 were derived from local funds possessed by certain towns.

"Our system of common school instruction," says the Report, "is based upon the principle, that the state, or the School Fund, will pay only a share of the expense; and that the towns, by an assessment upon property, shall pay at least an equal share. In addition to this, and in order to enjoy the benefits of the public money, the inhabitants of each district are required to tax themselves for the erection of a school-house, and furnishing it with necessary fuel and appendages. In order to ascertain more fully the practical operation of the system, an additional column was annexed to the forms for school reports which accompanied the revised statute, requiring trustees to return the amount paid annually for teachers' wages, over and above the sum received from the state treasury and from the town tax. A few towns only made returns the first year; but the abstract of the present year contains returns from 729 towns and wards; showing a total amount paid by the patrons of the common schools, for teachers' wages, of \$297,048·44; which, added to the public money, makes an aggregate of \$511,878·58, paid for teachers' wages alone, in the common schools of the state. Thus it will be seen, that where the state, or the revenue of the School Fund, pays one dollar for teachers' wages, the inhabitant of the town pays by a tax on his town, and by voluntary contribution in his district, more than four dollars for the same object. This latter sum of four dollars is made up in the proportion of one dollar assessed upon property, to three dollars paid by the scholar.

"The above statement is founded upon actual returns, and reliance may be placed in its accuracy. It exhibits only the sum paid for tuition, which constitutes very little more than half the expense of supporting the schools, as the following estimate will shew. The average between the number of districts organized, and those which have made reports, is 8,582; this number of school-houses, at an average price of \$200 each, would show a capital of \$1,716,400, vested in school-houses; the interest of which, at 6 per cent., would be \$102,984 00

"Annual expense of books for 480,000 scholars, at 50 cents each, is	240,000 00
"Fuel for 8,582 schools, at \$10 each, is	85,820 00
"Amount paid for teachers' wages, as appears by the abstract,	511,888 00
"Estimating in same ratio for 40 towns, not returning amount besides public money	16,988 00

"Total expended annually \$957,680 00"

VIII. NEW JERSEY.

THE territory comprised in this state was included in the patent for large tracts in America, which was granted by Charles II. to his brother the Duke of York, in 1664; and in the same year the Duke conveyed this territory to Lord Berkeley and Sir George Carteret; and it then received the name of New Jersey. In 1665, *Philip Carteret* was appointed the first governor of the province, which then contained only a few families.

In 1676, New Jersey was divided into two provinces, *East Jersey* and *West Jersey*; the former continuing under the government of Carteret, and the latter being held, for a time, as a dependency of New York.

In 1682, East Jersey was transferred to William Penn and eleven associates; and *Robert Barclay*, the celebrated author of the *Apology* for the Principles of the Quakers, was appointed governor.

In 1702, East and West Jersey were again united into one province, by the name of New Jersey, under the government of *Lord Cornbury*, who was also governor of New York; and this connection with New York, continued till 1738, when a separate government was instituted, which lasted till the American Revolution. *Lewis Morris* was the first royal governor, and *William Temple Franklin*, a son of the celebrated Dr. Franklin, the last.

OUTLINES OF THE CONSTITUTION.

The Constitution of New Jersey was formed in 1776 ; and no revision of it has since taken place, except that the Legislature has undertaken to explain its provisions in particular parts. The government is vested in a Governor, Legislative Council, and General Assembly ; and these bodies united are styled *the Legislature*.

The members of the Legislative Council and of the General Assembly, are elected annually, on the second Tuesday in October.

The number of members of the Legislative Council is 14, one being elected by each county in the state. The General Assembly has consisted, for a number of years past, of 43 members ; but by a law enacted in 1829, seven additional members were added ; and it will hereafter consist of 50 members, apportioned among the counties as follows ;—Bergen 3, Essex 5, Morris 4, Sussex 3, Warren 3, Hutterdon 5, Somersett 3, Middlesex 4, Monmouth 4, Burlington 5, Gloucester 4, Salem 3, Cumberland 3, and Cape May 1.

The Legislature meets annually (at *Trenton*), on the fourth Tuesday in October.

The governor is chosen annually by a joint vote of the Council and Assembly, at their first joint meeting after each annual election. The Governor is President of the Council ; and the Council also elect from their own body, at their first annual meeting, a vice-president, who acts in the place of the Governor in his absence. The Governor and Council form a Court of Appeals, in the last resort in all causes of law ; and they possess the power of granting pardon to criminals after condemnation.

The Constitution grants the right of suffrage to "all persons of full age who are worth 50 pounds proclamation money, clear estate in the same, and have resided within the county in which they claim to vote for twelve months immediately preceding the election." [The Legislature has declared

by law, that every white male inhabitant, who shall be over the age of 21 years, and shall have paid a tax, shall be considered worth fifty pounds, and entitled to vote;—and by another legislative act, females and negroes are prohibited from voting.]

The judges are appointed by the Legislature, those of the Supreme Court for a term of seven years, and those of the inferior courts, for five years; both are capable of being reappointed.

Government for the year ending November, 1830.

Peter D. Vroom, Jun. *Governor*; salary \$2,000, and fees of office as Chancellor of the state *ex officio*.

Edward Condit, *Vice-President of the Legislative Council*. Pay during attendance, \$3,50 a day.

Daniel Coleman, *Secretary of State, and Auditor*. Salary \$50, and perquisites.

Charles Parker, *Treasurer*. Salary \$1,100.

Samuel L. Southard, *Attorney General*. Salary \$80.

John Wilson, *Clerk in Chancery*. Pay, perquisites.

The members of the Legislative Council and the General Assembly, receive \$3 for each day's attendance, and \$3 for every 20 miles' travel.

EDUCATION.

There are colleges and theological seminaries at Princeton and New Brunswick, and academies at various places.

This state has a School Fund which amounted, in October 1829, to \$245,404 47, which is all in productive stocks, yielding an interest, on an average, of about 5 per cent. A tax of half of one per cent. on the amount of the capital stock of the several banks subscribed and paid in, is also appropriated to this fund; and the whole annual income is about \$22,000. By a law passed, in 1829, \$20,000 were annually appropriated to the support of common schools out of the income of the fund.

IX. PENNSYLVANIA.

PENNSYLVANIA was granted by Charles II. by a Charter signed on the 4th of March, 1681, to the illustrious *William Penn*, who was constituted the proprietary of the province. In 1682, William Penn, together with about two thousand settlers, most of whom, like himself, belonged to the society of Friends or Quakers, arrived in the country; and in the following year he laid out the plan of the city of *Philadelphia*. He established a friendly intercourse with the Indians, which was not interrupted for more than seventy years.

From the beginning of the 18th century till the commencement of the American Revolution, the government was generally administered by deputies appointed by the proprietaries, who mostly resided in England.

OUTLINES OF THE CONSTITUTION.

The first Constitution of Pennsylvania was adopted in 1776; the present Constitution in 1790.

The legislative power is vested in a *General Assembly*, consisting of a Senate and House of Representatives.

The representatives are elected annually on the second Tuesday in October, by the citizens of Philadelphia and of the several counties, apportioned according to the number of taxable inhabitants. The number cannot be less than 60, nor more than 100.

The senators are chosen for four years, one fourth being elected annually, at the time of the election of the representatives. Their number cannot be greater than one third, nor less than one fourth of the number of the representatives.

[In 1829, it was enacted by the General Assembly, "that until the next enumeration of taxable inhabitants, and an apportionment thereon, the senate, at a ratio of 7,700 [taxable inhabitants], shall consist of 33 members"; and "the House of Representatives, at a ratio of 2,544, shall consist of 100 members."—The following statement shows the representative number, and the number of members of the legislature, at different periods.

	Ratio.	Senators.				Ratio.	Representatives.
1793 to 1800		24	-	-	-		78
1800 " 1807	4,670	25	-	-	-	1,350	86
1807 " 1814	4,500	31	-	-	-	1,500	95
1814 " 1821	5,250	31	-	-	-	1,750	97
1821 " 1828	6,300	33	-	-	-	2,100	100
1828 " 1835	7,700	33	-	-	-	2,544	100.]

The executive power is vested in a Governor, who is elected by the people on the second Tuesday in October, and who holds his office during three years, from the third Tuesday in December next following his election; and he cannot hold the office more than 9 years, in any term of 12 years.

The General Assembly meets annually (at *Harrisburg*), on the first Tuesday in December, unless sooner convened by the Governor

The judicial power is vested in a Supreme Court, in Courts of oyer and terminer and gaol-delivery, in Courts of Common Pleas, an Orphans' Court, a Register's Court, a Court of Quarter Sessions of the Peace for each county, and in such other courts as the legislature may, from time to time, establish. The judges of the Supreme Court and the several Courts of Common Pleas, are appointed by the Governor, and hold their offices during good behavior.

The right of suffrage is possessed by every freeman of the age of 21 years, who has resided in the state two years next preceding an election, and within that time paid a state or county tax, assessed at least six months before the election.

THE EXECUTIVE AND LEGISLATURE.

The term of the present Governor will expire on the 3d Tuesday in December, 1832; and the terms of the Senators in October, in the years 1830, 1831, 1832, and 1833.

		Salary.

The state is divided into five districts for the sessions of the *Supreme Court*, which, as a court in bank, holds six regular terms, for argument &c., annually; viz. for the Eastern District, at *Philadelphia*, on the 2d Monday in March, and on the 2d Monday in December; for the Lancaster District, at *Lancaster*, on the 2d Monday in May; for the Middle District, at *Sunbury*, on the Wednesday following the second week of the term of the Lancaster District; for the Western District, at *Pittsburg*, on the first Monday in September; and for the Southern District, at *Chambersburg*, on the Monday week next following the second week of the term of the Western District.

It is only in the city and county of Philadelphia that the Supreme Court has original jurisdiction, and there only when the sum in controversy exceeds \$500; all issues of fact are tried by jury before a single judge, at *nisi prius*.

For the other counties of this state, *Circuit Courts* are held, which are unlike courts of *nisi prius*, as judgment may be rendered at them, subject to revision by appeal, in the Supreme Court in bank, and causes are only brought into them by removal from the Courts of Common Pleas. They are held by one judge in each county, at least once a year.

EDUCATION.

The principal literary seminaries in this state are the University of Pennsylvania with its Medical School, at Philadelphia; Dickinson College, at Carlisle; Jefferson College, at Canonsburg; Washington College, at Washington; Western University, at Pittsburg; Alleghany College, at Mead-

ville; Madison College, at Union Town; Mount Airy College, at Germantown; the Theological Seminaries, at Gettysburg, York, and Alleghany Town; and the Moravian schools, at Bethlehem, Nazareth, and Litiz.

The Constitution declares that "the legislature shall, as soon as conveniently may be, provide by law for the establishment of schools in such manner that the poor may be taught gratis." Under this injunction means have been provided in nearly all the counties of the state, for the instruction of the children of indigent parents. They are sent to the most convenient schools of the neighborhoods in which they respectively reside, and the expense is paid by the county commissioners. In the city and county of Philadelphia, which constitutes the First School District of Pennsylvania, the Lancasterian system has been introduced for the education of the children described in the Constitution. In the Twelfth Annual Report of the Comptrollers of the Public Schools of this District, dated February 23, 1830, it is stated, that "during twelve years 34,703 children had received the benefits of tuition under the wise and beneficent provisions of the existing act of the General Assembly." These schools are superintended by gentlemen who serve without compensation. The teachers are well qualified for their duties, and are liberally paid. [See Hazard's "*Register of Pennsylvania*."]

X. DELAWARE.

THE first European settlement in this state was formed by *Swedes* and *Fins*, in 1627; in 1655, the colony was taken from the Swedes by the *Dutch*, under Governor Stuyvesant; and after the conquest of New York by the English, in 1664, it was placed under the jurisdiction of the government of *New York*.

In 1682, the country was granted to William Penn, and it was placed under the same executive and legislative government with *Pennsylvania*. It was then, as it is now, divided into three counties, Newcastle, Kent, and Sussex, generally styled, till the American Revolution, "*The Three Lower Counties upon the Delaware*."

In 1701, the representatives of Delaware withdrew from those of *Pennsylvania*; the first separate legislative assembly met at Newcastle, in 1704; and it ever afterwards continued distinct from that of *Pennsylvania*; though the same governor presided over both provinces till the 4th of July, 1776.

The first Constitution of Delaware, which was formed in 1776, placed the executive power in a President, and a Privy Council of 4 members. In 1792, a new Constitution, the one now in operation, was adopted, by which the executive power is vested in a Governor.

OUTLINES OF THE CONSTITUTION.

The legislative power is vested in a *General Assembly*, consisting of a Senate and House of Representatives.

The representatives are elected annually, 7 from each county, the whole number being 21. The senators are elected for three years, 3 from each county, the whole number being 9. Three senators, one from each county, are chosen every year.

The executive power is vested in a Governor, who is elected by the people for three years; and he cannot hold the office more than 3 years in 6.

The representatives and three of the senators are elected annually on the first Tuesday in October; and the governor, every third year, at the same time.

The General Assembly meets (at *Dover*), annually, on the first Tuesday in January.

The Constitution grants the right of suffrage to all white freemen, of the age of 21 years, who have resided in the state two years, next before the election, and within that time paid a state or county tax.

The judicial power is vested in a Court of Chancery, a Supreme Court, Court of Common Pleas, &c. The chancellor and judges are appointed by the governor, and hold their offices during good behavior.

LEGISLATURE.

David Hazzard, *Governor*; term of office expires on the 3d Tuesday in January, 1833; salary \$1,333.32.

EDUCATION.

This state has a *School Fund*, amounting to \$170,000, the interest of which, together with a small tax levied on each school district of four miles square, at the will of the majority of the taxable inhabitants, is appropriated to the support of free schools. No district is entitled to any share of the School Fund, that will not raise, by taxation, a sum equal to its share of the income of the Fund.

XI. MARYLAND.

In 1632, Maryland was granted by Charles I. of England, to *Sir George Calvert, Lord Baltimore*, a Roman Catholic, and an eminent statesman,

who had been secretary to James I.; but before the patent was completed, Lord Baltimore died, and the patent, dated June 20, 1632, was given to his eldest son Cecilius, who succeeded to his titles, and who, for upwards of forty years, directed, as proprietor, the affairs of the colony.

Leonard Calvert, brother to Cecilius, Lord Baltimore, was appointed the first governor; and he, together with about 200 persons, commenced the settlement of the town of St. Mary's in 1634. A free toleration of religion was established, and a system of equity and humanity was practised with regard to the Indian tribes.

OUTLINES OF THE CONSTITUTION.

The Constitution of this state was first formed in 1776; since which time many amendments have been made.

The legislative power is vested in a Senate, consisting of 15 members, and a House of Delegates, consisting of 80 members; and these two branches united are styled *The General Assembly of Maryland*.

The members of the House of Delegates, four from each county, are elected annually by the people, on the first Monday in October; and the members of the Senate are elected every fifth year on the third Monday in September, at Annapolis, by electors who are chosen by the people on the first Monday of the same month of September. These electors choose by ballot 9 senators from the Western Shore, and 6 from the Eastern, who hold their office five years.

The executive power is vested in a Governor, who is elected annually on the first Monday in January, by a joint ballot of both Houses of the General Assembly. No one can hold the office of governor more than three years successively, nor be eligible as governor until the expiration of four years after he has been out of that office. The governor is assisted by a Council of five members, who are chosen annually by a joint ballot of the Senate and House of Delegates.

The General Assembly meets annually (at *Annapolis*) on the last Monday in December. The Council of the Governor is elected on the first Tuesday in January; the governor nominates to office, and the council appoints.

The Constitution grants the right of suffrage to every free, white, male citizen, above 21 years of age, having resided twelve months within the state, and six months in the county, or in the city of Annapolis or Baltimore, next preceding the election at which he offers to vote.

The chancellor and judges are nominated by the governor, and appointed by the council; and they hold their offices during good behavior.

[The Legislature formerly met on the first Monday in Dec., and the governor was elected on the 2d Monday of Dec.; but the Constitution was altered at the session of 1893, and confirmed in 1894.]

Government.

Thomas King Carroll, *Governor*; term of office expires on the first Tuesday in January, 1831; salary \$2,666-7.

The members of the General Assembly receive \$4 a day: the Speakers of each House, \$5.

JUDICIARY.

Albany	34,913			

EDUCATION.

The principal literary seminaries in this state are the University of Maryland, St. Mary's College, and Baltimore College, in Baltimore; and St. John's College, at Annapolis. There are several academies in the state, which receive \$800 a year from the state treasury.

A law in favor of primary schools was passed in 1825, and has been partially carried into effect in two or three of the counties. The state has a

School Fund consisting of a sum advanced by Maryland during the late war and paid by the national government, amounting to \$75,000, together with a tax on bank capital of 20 cents on \$100. The fund is at interest, and the amount received from the banks has also generally been placed at interest, to the credit of the several counties; but in some instances it has been expended for its proper object. The intention of the state was, that it should be used to pay teachers only; and that the expense of building school-houses, and also other expenses, should be paid by a tax on property within the several school districts.

XII. VIRGINIA.

THE first permanent English settlement formed in America was made, in 1607, by 105 adventurers, on James river, in this state, at a place named *Jamestown* in honor of James I. of England.

Several unsuccessful attempts had been made in the latter part of the preceding century, during the reign of Queen Elizabeth, in honor of whom the country was named *Virginia*; which name, though now limited to a single state, at the time of the settlement, was applied to all the country in America lying between Lat. 34° and 45° N.

The early history of the colony is replete with interesting and affecting incidents, occasioned by dangers and calamities; by sickness, want, and contests with the Indians.

The government of the colony was at first administered by a Council of seven persons, with a President chosen from among their number; but afterwards it was administered by a Governor, appointed, except during the Commonwealth in England, by the crown.

OUTLINES OF THE CONSTITUTION.

The Constitution of this state, which has hitherto, since its first adoption, been in operation, was formed in 1776; but on the first Monday in October, 1829, a convention met at Richmond "to consider, discuss, and propose a new Constitution, or alterations and amendments to the existing Constitution"; and on the 14th of January, 1830, the convention adopted an Amended Constitution, by a vote of 55 to 40.

The Amended Constitution, on being submitted to the legal voters of the state, was ratified by a majority of 10,492 votes, as appears by the following statement.

		For.	Against.
Votes in Trans-Alleghany District,	- -	2,123	11,289
" Valley District, - - - -	-	3,342	2,097
" Middle District, - - - -	-	12,417	1,086
" Tide-water District, - - - -	-	7,673	1,091
		<hr/> 26,055	<hr/> 15,563

[The first election of members of the House of Delegates and of the Senate, under the Amended Constitution, is to take place on the several court-days throughout the month of October, 1830, in the several counties and boroughs; and the first General Assembly is to convene at Richmond on the first Monday in January, 1831.]

By this Constitution the legislative power is vested in a Senate and a House of Delegates, which are together styled *The General Assembly of Virginia*.

The House of Delegates consists of 134 members, chosen annually; 31 from the 26 counties west of the Alleghany mountains; 25 from the 14 counties between the Alleghany mountains and Blue Ridge; 42 from the 29 counties east of the Blue Ridge, and above tide-water; and 36 from the counties, cities, towns, and boroughs lying upon tide-water.

The Senate consists of 32 members, 13 from the counties west of the Blue Ridge, and 19 from the counties, cities, towns, and boroughs east thereof. The senators are elected for four years; and the seats of one fourth of them are vacated every year. In all elections to any office or place of trust, honor, or profit, the votes are given openly, or *viva voce*, and not by ballot.

A reapportionment for representation in both houses, is to take place every ten years, commencing in 1841, until which time there is to be no change in the number of delegates and senators from the several divisions; and after 1841, the number of delegates is never to exceed 150; nor that of the senators, 36.

The executive power is vested in a Governor elected by the joint vote of the two houses of the General Assembly. He holds his office three years, commencing on the 1st of January next succeeding his election, or on such other day as may be, from time to time, prescribed by law; and he is ineligible for the three years next after the expiration of his term of office.

There is a Council of State, consisting of three members elected for three years, by the joint vote of the two houses; the seat of one being vacated annually. The senior counsellor is lieutenant governor.

The judges of the Supreme Court of Appeals and of the Superior Courts are elected by a joint vote of both houses of the General Assembly, and

hold their offices during good behavior ; or until removed by a concurrent vote of both houses ; but two thirds of the members present must concur in such vote, and the cause of removal be entered on the journals of each house.

The right of suffrage is extended to every white male citizen of the Commonwealth, resident therein, aged 21 years and upwards, who is qualified to exercise the right of suffrage according to the former Constitution and laws ;—or who owns a freehold of the value of \$25 ; or who has a joint interest to the amount of \$25 in a freehold ;—or who has a life estate in, or reversionary title to, land of the value of \$50, having had been so possessed for six months ; or who shall own and be in the actual occupation of a leasehold estate, having the title recorded two months before he shall offer to vote—of a term originally not less than five years, and of the annual value or rent of \$200 ;—or who for twelve months before offering to vote, has been a house-keeper and head of a family, and shall have been assessed with a part of the revenue of the Commonwealth within the preceding year, and actually paid the same.

EXECUTIVE GOVERNMENT.

The Term of the present Executive and Legislative Government will expire on the 1st Monday in January, 1831.

John Floyd,	Governor,	Salary. \$3,333 $\frac{1}{2}$

The James River Company.—The sum expended on the James River, the Kenawha River and the turnpike road, including the expenses of superintendence, &c. amounts to \$1,274,583 96, of which the sum of \$638,883 86 has been laid out on the Lower James River Canal—\$365,207 02, on the Mountain Section of the Canal—\$87,389 81, on the Kenawha river, and \$171,982 49 on the turnpike road and bridges, from Covington to the Kenawha. Under the act of a late session of the legislature extending the Kenawha road, loans have been effected for \$50,000, and contracts entered into for \$51,937 50, on account of which \$500 only have as yet been paid. The interest on the sums expended and borrowed amounts to \$71,673 50, and exhibits the fact that the annual disbursements on that account exceeded the annual receipts by \$37,727 26. This deficiency is paid out of *the general income of the fund for internal improvements*, and sensibly paralyzes the strength of that once productive and most valuable fund.

The whole capital employed in internal improvement, exclusive of that belonging to the Manchester and Petersburg Turnpike Company and Little River Company, amounts to \$3,263,811.

The United States contributed \$200,000 of stock belonging to the Dismal Swamp Canal Company; and North Carolina contributed \$50,000 of the stock of the Roanoke Navigation Company.

EDUCATION.

The principal literary institutions of this state are the University of Virginia, at Charlottesville; William and Mary College, at Williamsburg; Hampden-Sydney, in Prince Edward County; and Washington College, at Lexington.

This state has a *Literary Fund*, created in 1809, and amounting, in available capital, according to a late report, to \$1,233,522 97. All escheats, confiscations, and derelict property; also all lands forfeited for non-payment of taxes, and all sums refunded by the national government, for the expenses of the late war, have been appropriated to the encouragement of learning. Of the interest of the Fund, \$15,000 are annually appropriated to the University of Virginia, and \$45,000 to the education of the poor in the respective counties. This sum is divided among the counties according to the ratio of white population; and the court of each

county appoints commissioners to manage and superintend the application of the share belonging to it. Within a year from October, 1828, 26,690 made application to be educated, of whom 12,642 were received. The average cost of education was \$9 per annum.

XIII. NORTH CAROLINA.

In the latter part of the fifteenth century, three different attempts were made, under the direction of the celebrated Sir Walter Raleigh, to establish settlements in North Carolina, which was then included within the limits of the country, that had been recently named *Virginia*. These were the first attempts made by the English to form colonies in North America: they all proved unsuccessful; and many years passed away before the attempt to settle the country was renewed.

The first permanent settlements were formed about the middle of the seventeenth century. North Carolina was long united under the same government with South Carolina: it was for many years called the *County of Albemarle*, or the *County of Albemarle in Carolina*, and about the beginning of the 18th century, the *Colony of North Carolina*. As early as 1715, it had a separate legislative assembly, at which time *Charles Eden* was Governor; and in the year 1727, it was formed into an entirely distinct province.

Nathaniel Alexander, do. 1805	

OUTLINES OF THE CONSTITUTION.

The Constitution of North Carolina was agreed to and resolved upon, by representatives chosen for that purpose, at Halifax, December 18, 1776.

The legislative authority is vested in a body, styled *The General Assembly*, consisting of a Senate and a House of Commons, both elected annually by the people. One senator and two members of the House of Commons are sent from each of the 62 counties; and one of the latter also from each of the towns of Edenton, Newbern, Wilmington, Salisbury, Hillsborough, and Halifax.

The chief executive officer is the Governor, who is chosen annually by a joint vote of the two Houses; and he is eligible for 3 years only in 6. He is assisted by an executive Council of seven members, chosen annually by a joint vote of the two Houses. In case of the death of the Governor, his duties devolve upon the Speaker of the Senate.

The judges of the Supreme and Superior Courts are appointed by a joint vote of the two Houses, and hold their offices during good behavior.

The Constitution grants the right of voting for members of the House of Commons to all freemen of the age of 21 years, who have been inhabitants of the state 12 months immediately preceding the election; but in order to vote for a senator, a freeman must be possessed of a freehold of 50 acres of land.

The time of electing the members of the General Assembly is appointed by the legislature, and commonly takes place in the month of August.

The Assembly meets annually (at *Raleigh*), and usually on the second Monday in November; and the governor is commonly chosen in December.

GOVERNMENT.

John Owen, *Governor*; term expires December, 1830; salary \$2,000.

The members of both houses of the General Assembly receive \$3 a day; the Speaker, \$4.

JUDICIARY.

Supreme Court.

	Salary.
Leonard Henderson, <i>Chief Justice</i> ,	\$2,500

EDUCATION.

The principal literary institution in this state is the University of North Carolina, at Chapel Hill. Academies are established at various places. The state has a Literary Fund, arising from Bank dividends, &c. amounting to upwards of \$70,000. It is provided, that when this Fund shall have accumulated to a sufficient amount, the income of it shall be divided among the several counties, in proportion to the free population, for the support of common schools.

XIV. SOUTH CAROLINA.

In 1663, the territory which now comprises the states of North and South Carolina and the greater part of Georgia, was granted by Charles II. to the Earl of Clarendon and seven others, who were constituted proprietors. The colony was named *Carolina*, and the government was vested

in the hands of the proprietors. The proprietary government lasted about fifty years, when it was abolished by the people; and the government was afterwards directed by governors appointed by the king.

OUTLINES OF THE CONSTITUTION.

The first Constitution of this state was formed in 1775; the present Constitution was adopted in 1790.

The legislative authority is vested in a *General Assembly*, consisting of a Senate and a House of Representatives.

The Senate consists of 45 members, who are elected by districts for four years, one half being chosen biennially.

The House of Representatives consist of 124 members, who are apportioned among the several districts, according to the number of white inhabitants and taxation; and are elected for two years. The representatives and one half of the senators are chosen every second year, on the second Monday in October and the day following.

The executive power is vested in a Governor, who is elected for two years, by a joint vote of the Senate and House of Representatives, at every first meeting of the House of Representatives. A governor after having performed the duties of the office for two years, cannot be reelected till after the expiration of four years.

At the time of the election of Governor, a Lieutenant Governor is chosen in the same manner, and for the same period.

The General Assembly meets annually (at *Columbia*), on the fourth Monday in November.

The Chancellor and Judges are appointed by the joint ballot of the Senate and House of Representatives, and hold their offices during good behavior.

The Constitution grants the right of suffrage to every free, white, male citizen, of the age of 21 years, having resided in the state two years previous to the day of election, and having been possessed of a freehold of 50 acres of land, or a town lot, at least six months before such election, or (not having such freehold or town lot) having been a resident in the election district in which he offers his vote, six months before said election, and having paid a tax the preceding year of 3s. sterling towards the support of the government.

GOVERNMENT.

Stephen D. Miller, *Governor*; term of office expires in December, 1830; salary, \$3,900.

Thomas Williams, *Lieutenant Governor*.—No salary.

The 45 state senators and 124 representatives receive each \$4 a day.

* * The Bank of the United States has an office of Discount and Deposit at Charleston.

EDUCATION.

The principal literary institutions of this state are the College of South Carolina, at Columbia, and Charleston College, in Charleston. The College of South Carolina has been built up and supported by the state legislature; and the sum of nearly \$200,000 has been expended upon the buildings, library, philosophical apparatus, and occasional repairs. In addition to this, the legislature makes an annual appropriation of about \$15,000 to defray the expenses of the institution; and it also supports two beneficiaries at the college, at the annual expense of \$260 each.

The legislature makes an annual appropriation of nearly \$40,000 for the support of *free schools*. The Commissioners of Free Schools, at the session of the legislature, in 1823, reported that 840 schools were established throughout the state, in which 9,036 scholars were instructed, at the expense of \$39, 716. The annual appropriation, in 1829, was \$37,200.

XV. GEORGIA.

THE first English settlement of Georgia was formed at Savannah, in 1733, by general *James Edw. Oglethorpe*, together with 160 persons. Of all the *Thirteen States* which belonged to the Union at the time of the Declaration of Independence, this was the last settled.

George Walton, do. 1789	John Forsyth, do. 1827
Edward Telfair, do. 1790	George R. Gilmer, do. 1829

OUTLINES OF THE CONSTITUTION.

The first Constitution of Georgia was formed in 1777 ; a second, in 1785 ; and a third, the one now in operation, in 1798.

The legislative power is vested in a Senate and House of Representatives, which together are styled *The General Assembly*.

The members of both Houses are chosen annually on the first Monday in October. One senator is elected for each county, and the number of

representatives is in proportion to population, including three fifths of all the people of color; but each county is entitled to at least one, and no one to more than four, members.

The executive power is vested in a Governor, who was formerly elected by the General Assembly; but he is now (and ever since 1824) elected by the people on the first Monday in October; and he holds the office for two years.

The General Assembly meets (at *Milledgeville*) on the first Monday in November; unless convened at another time by the Governor.

The Constitution grants the right of suffrage to all "citizens and inhabitants, who have attained the age of 21 years, and have paid all the taxes which may have been required of them, and which they may have had opportunity of paying, agreeably to law, for the year preceding the election, and shall have resided six months within the county."

The judicial power is vested in a Superior Court and in such inferior jurisdictions as the legislature may, from time to time, ordain and establish; and the superior and inferior courts sit twice in each county every year. The judges of the Superior Court are elected by the legislature for three years; the justices of the inferior courts, and justices of the peace, are elected quadriennially by the people; and the clerks of the superior and inferior courts biennially.

GOVERNMENT.

George R. Gilmer, *Governor*; term of office will expire in November, 1881; salary \$3,000.

Senators, 76; Representatives, 140. Pay \$4 a day each, and 4 cents a mile for travel. The President of the Senate and the Speaker of the House of Representatives receive each \$6 a day.

JUDICIARY.

Superior Court.

			Salary.
William H. Crawford,	<i>Judge of the</i>	Northern Circuit,	\$2,100
Thaddeus G. Holt,	<i>do.</i>	Southern Circuit,	2,100
William Law,	<i>do.</i>	Eastern Circuit,	2,100

Total		\$5,832,349	\$2,719,356	\$1,129,527 72

The "Central Bank of Georgia" is entirely the property of the state; and the design of its incorporation was to afford means of letting out the surplus funds of the state, and also to place the debts due to the state in the hands of suitable agents (the directors) for collection. Its capital is composed of all the bank stock held by the state, of all bonds, notes, debts, specialties, and judgments due to it; and all moneys arising from the sale of lands belonging to the state. Debts due to the state are collected by the bank; and persons owing the state give notes payable at the bank.

* The Bank of the United States has an Office of Discount and Deposit at Savannah.

PENITENTIARY.

The State Penitentiary is situated at Milledgeville, and on the 31st of December, 1829, contained 92 convicts. The salary of the principal keeper is \$1,438. The sum of about \$5,000 was annually appropriated for the expenses of the institution before the year 1829, when it was put under a new management, and during the year 1829, it required no assistance from the state.

INTERNAL IMPROVEMENT.

According to a report made in 1828, "within the preceding 13 years the sum of \$324,500 had been appropriated by the state for the purposes of internal improvement." But the beneficial results which were expected, have not been realized; and it is stated that "all the reports as well as the omission to make them, go to show that those entrusted with the business had not manifested that fidelity, industry, and skill, which the

* Specie and bills of Banks that pay specie.

state had a right to expect from them." In 1829 the system was changed; and the sum of \$70,000 dollars was appropriated to purchase a supply of negroes, making, with what were before possessed, the number of 100. These were placed under the direction of two superintendents, by whom they were distributed into various parts of the state, to be employed under overseers in working on roads and rivers. According to the report of the Committee of Internal Improvement, the canal from the Savannah to the Ogeechee was expected to be completed in March, 1830, at the expense of about \$165,000. The design is to extend the canal to the Altamaha, making its length 72 miles.

EDUCATION.

The principal literary seminary in this state is Franklin College, or the University of Georgia, at Athens, which has funds to the amount of \$136,000, of which \$100,000 are invested in the Bank of the State of Georgia, which stock the state guarantees to yield 8 per cent. *per annum*.

The following statement relating to education is given by Mr. Sherwood in his "Gazetteer of Georgia." "There are about 80 incorporated academies in this state, 64 of which have been brought into operation. The average number of pupils in each, is $47 = 3,008$. In the northern and southern sections of the state, there are probably 5 common schools in each county; 40 counties; 30 pupils each = 6,000. In the middle section, say 7 common schools in each county; 25 counties = 5,250. Total number of pupils in the academies and common schools 14,258." The state possesses "Academy and Poor School Funds" to a considerable amount. 'By an act of the legislature of 1792, each county academy was allowed to purchase the value of £1,000 of confiscated property: 1,000 acres of land in each county were granted for the support of schools; and also a fund of \$250,000, to be vested in stocks for the same purpose.

INDIANS.

Two considerable tribes of Indians reside partly within the chartered limits of this state; the *Cherokees* in the northwestern part, and the *Creeks* in the western. The Cherokees have made greater advances in the arts of civilized life than any other tribe of North American Indians. A proposition to remove them to the west of the Mississippi, which has been recently made, has excited a deep interest throughout the country; and it is to be hoped that such a course will be pursued as shall be consistent at once with justice and humanity,—with the welfare of the Cherokees, and the honor of the United States. The following notice of them is extracted from Mr. Sherwood's *Gazetteer of Georgia*, published in 1827.

"Within the last 20 years the Cherokees have rapidly advanced towards civilization. They now live in comfortable houses, chiefly in villages, and cultivate large farms. They raise large herds of cattle, which they sell for

beef to the inhabitants of neighboring states. Many mechanical arts have been introduced among them. They have carpenters and blacksmiths ; and many of the women spin and weave and make butter and cheese. The population, instead of decreasing, as is the case generally with tribes surrounded by the whites, increases very rapidly. There are now 13,563 natives in the nation ; 147 white men, and 78 white women, who have intermarried with them. They own 1,277 slaves. Total, 15,060 souls ; increase in the last six years 3,563.

"Their government is republican, and power is vested in a Committee and Council, answering to our Senate and House of Representatives. The members are elected once in two years. *Newtown* is the seat of government. Their judges act with authority, and prevent entirely the use of ardent spirits, during the sessions of their courts. The mission at Spring Place was established in 1801. Since that time nearly a dozen have been brought into operation in various parts of the nation. The number of children in the several missionary schools is nearly 500, all learning the English language."

XVI. ALABAMA.

MOBILE, in the southern part of Alabama, was settled long since by the Spanish ; yet the territory which now forms this state contained but very few civilized inhabitants before 1810. Since that time its increase in population has been exceedingly rapid.

Alabama was erected into a territorial government in 1817 ; the inhabitants formed a Constitution in 1819 ; and in 1820, it was admitted into the Union.

GOVERNORS.

William W. Bibb, *appointed* 1817, Governor of the Territory of Alabama.

Under the Constitution.

William W. Bibb,	<i>elected</i> 1819	John Murphy,	<i>elected</i> 1825
Israel Pickens,	<i>do.</i> 1821	Gabriel Moore,	<i>do.</i> 1829

OUTLINES OF THE CONSTITUTION.

The legislative power is vested in two branches, a Senate and House of Representatives, which together are styled *The General Assembly of the State of Alabama*.

The representatives are elected annually, and are apportioned among the different counties in proportion to the white population ; the whole number cannot exceed 100, nor fall short of 60. The senators are elected for three

years, and one third of them are chosen every year. Their number cannot be more than one third, nor less than one fourth of the number of representatives.

The executive power is vested in a Governor, who is elected by the people, for two years; and is eligible 4 years out of 6.

The representatives and one third of the senators are elected annually on the first Monday in August and the day following; and the governor is elected biennially at the same time.

The General Assembly meets annually (at *Tuscaloosa*) on the fourth Monday in October.

The right of suffrage is possessed by every white, male citizen of 21 years of age, who has resided within the state one year next preceding an election, and the last three months within the county, city, or town, in which he offers his vote.

The judicial power is vested in one Supreme Court, in Circuit Courts, and such inferior courts as the General Assembly may, from time to time, direct and establish. The judges, after November in 1833, are to be elected by a joint vote of both Houses of the General Assembly, every six years.

THE EXECUTIVE AND LEGISLATURE.

		Salary.
Gabriel Moore,	Governor, (term of office will expire on the 3d Monday in November, 1831),	\$2,000
James T. Thornton,	Secretary of State,	1,000
George W. Crabb,	Comptroller of Public Accounts,	1,000
Hardin Perkins,	State Treasurer,	1,000
Constantine Perkins,	Attorney General,	\$425 & perquisites.

The Senate now consists of 22 members; the House of Representatives of 72 members. The pay of the members of both Houses is \$4 per day each.

JUDICIARY.

The state is divided into *Seven Circuits*, in each of which there is a circuit judge; and the *Supreme Court* is formed by a union of these seven judges.

		Salary.

INTERNAL IMPROVEMENT.

By an act of Congress of March 2, 1819, it was provided that 5 per cent. of the net proceeds of all the sales of public lands in this state, made subsequently to September 1, 1819, should be reserved for making public roads and canals, and improving the navigation of rivers. Three fifths of the amount were directed to be applied to these objects within the state, and two fifths to the making of a road or of roads leading to the state, under the direction of Congress. This act gave rise to what is commonly called the "Three per cent. Fund," which has been vested in the Bank of the State of Alabama; and it amounted, according to the report of the State Treasurer, on the 26th of November, 1829, to \$96,355 77. A Board of Internal Improvement, to consist of six commissioners, was established by the General Assembly in January, 1830, under whose superintendence the income of this fund is to be appropriated to objects of public utility, as roads, canals, &c.

On the 23d of May, 1828, Congress made a grant to this state of 400,000 acres of relinquished and unappropriated lands for improving the navigation of the Muscle Shoals and Colbert's Shoals in the Tennessee; and likewise for improving the navigation of the Coosa, Cahawba, and Black-Warrior rivers.

* EDUCATION.

An institution styled the *University of the State of Alabama*, was established by an act of the General Assembly of December 18, 1819, and incorporated by a supplementary act passed December 18, 1820. By an act of Congress of March 2, 1819, one section of land (640 acres) was granted to the inhabitants of each township for the use of schools, and 72 sections, or two townships, for the support of a seminary of learning. The funds of the University consist of the proceeds of these lands. According to a report of the President of the Board of Trustees, dated January 14, 1880, 21,845 75 acres had been sold for the sum of \$304,651 06, of which \$111,712 50½ had been invested in 6 per cent. stock; and 24,234-25 acres remained unsold. The sum of \$31,064 79 had been expended upon the

college buildings, which are situated a mile from the town of Tuscaloosa, but are not yet finished.

La Grange College, in Franklin county, was incorporated in January, 1880; but it has not received any public endowment. Twenty-four *academies* have been incorporated in the state.

XVII. MISSISSIPPI.

THIS state was included within the country which was discovered and possessed by the French, who formed a settlement at *Natchez* about the year 1716; but in 1763, it was ceded to the English, with the rest of the French possessions to the east of the Mississippi.

There were but few inhabitants within the present limits of this state before the end of the last century. In 1798, the country was erected into a territorial government; and in 1817, into an independent state.

GOVERNORS

Under the Territorial Government.

Winthrop Sargent, appointed 1798	Robert Williams, appointed 1805
Wm. C. C. Claiborne, do. 1802	David Holmes, do. 1809

Under the Constitution.

George Poindexter, do. 1819	Gerard C. Brandon, do. 1827
Walter Leake, do. 1821	

OUTLINES OF THE CONSTITUTION.

The Constitution of this state was formed at the town of Washington, in August, 1817.

The legislative power is vested in a Senate and a House of Representatives, which are together styled *The General Assembly of the State of Mississippi*.

The representatives are elected annually on the first Monday in August, in the ratio of one to every 3,000 white inhabitants. Each county, however, is entitled to one; and the present whole number is 33. According to the Constitution, when the number of white inhabitants exceeds 80,000, the number of representatives cannot be less than 36, nor more than 100.

The members of the Senate are elected for three years, one third being chosen annually. Their number cannot be less than one fourth, nor more than one third of the whole number of representatives.

The executive power is vested in a Governor, who is elected by the people, for two years, on the first Monday in August. At every election of Governor, a Lieutenant Governor is also chosen, who is President of the Senate, and on whom the executive duties devolve in case of the death, resignation, or absence of the governor.

The General Assembly meets (at *Jackson*) annually on the first Monday in November.

The right of suffrage is granted to every free, white, male citizen of the United States, of the age of 21 years or upwards, who has resided within this state one year next preceding an election, and the last six months within the county, city, or town in which he offers to vote, and is enrolled in the militia thereof, unless exempted by law from military service; or having the aforesaid qualifications of citizenship and residence, has paid a state or county tax.

The judicial power is vested in a Supreme Court, and such superior and inferior courts of law and equity, as the legislature may, from time to time, establish. The judges of the several courts are elected by the General Assembly, and hold their offices during good behavior, till the age of 65 years.

GOVERNMENT.

	Salary.
Gerard C. Brandon, <i>Governor</i> ; (last elected on the first Monday in August, 1829; installed January 9, 1830)	\$2,500
Abraham M. Scott, <i>Lieutenant Governor</i> ;—Pay \$6 a day during the session of the Legislature.	
John A. Grimball, <i>Secretary of State</i> ,	1,200
James Phillips, <i>State Treasurer</i> ,	1,000
H. G. Runnels, <i>Auditor of Public Accounts</i> ,	1,000
R. M. Gaines, <i>Attorney General</i> ,	1,000

JUDICIARY.

Court of Chancery.

	Salary.
John A. Quitman, <i>Chancellor</i> ,	\$2,000

Supreme Court.

Edward Turner, <i>Chief Justice</i> ,	2,000
Joshua Child, <i>Associate Justice</i> ,	2,000
John Black, <i>do.</i>	2,000
James R. Nicholson, <i>do.</i>	2,000
Harry Cage, <i>do.</i>	2,000

Circuit Courts.

The state is divided into five districts, in which the judges of the Supreme Court severally hold Circuit Courts. These courts have original

jurisdiction in all cases where the sum in dispute exceeds \$50 ; and appellate jurisdiction from the courts of the justices of the peace, when the sum exceeds \$20. They are also invested with criminal jurisdiction, except in the *County of Adams*, which has a court exclusively of criminal jurisdiction, of which the present judge is *John M. Maury* : salary \$800.

Probate and County Courts.

There are in every county a Probate Court and a County Court, the judges of which have no salary, but are paid by fees and by an allowance of \$3 a day. The County Court is composed of three judges, of which the Probate Judge is the presiding justice. This court has jurisdiction over all offences committed by slaves ; and for such trials it is vested with the powers which usually belong to courts of oyer and terminer. It has appellate jurisdiction from the courts of the justices of the peace, when the sum involved does not exceed \$20.

BANK.

The Bank of Mississippi, at Natchez, capital \$1,000,000. This bank, the only one in the state, has three branches in different places. The dividends for the last six years have been, on an average, more than 11 per cent. *per annum*.

EDUCATION.

Jefferson College, at Washington, was established in 1802, and has received liberal endowments in public lands from the federal government. It is pleasantly situated ; the buildings are large and commodious ; the course of study is similar to that of West Point ; and the number of cadets or students in 1830, was 98.

There are other seminaries in different parts ; and although an interest in education is manifested in the different counties, yet no system of primary schools has been adopted. The state has a *Literary Fund* amounting, at present, to \$27,800, derived from the donation of the general government, rents of lands, three per cent. on all sales of public lands, fines, forfeitures, &c. But no portion of it is available till it shall amount to \$50,000.

INDIANS.

The whole number of acres of land within this state is computed at 80,206,800, of which 15,700,000 acres are still claimed by the Indians ; 11,643,275 were, in 1824, at the disposal of the national government ; the remainder being 2,863,525. The tribes of Indians within the chartered limits of the state are the *Choctaws*, estimated at from 20,000 to 26,000 ; and the *Chickasaws*, computed at about 4,000.

XVIII. LOUISIANA.

THE state of Louisiana comprises the southern part of an extensive country, which was purchased by the United States of France, in 1803, for the sum of \$15,000,000.

The river Mississippi was discovered in 1673, by Marquette and Joliette, two French missionaries; in 1682, the country was explored by La Salle, and named *Louisiana*, in honor of Louis XIV; in 1699, a French settlement was begun at Iberville; and in 1717, New Orleans was founded.

The country now forming the state of Louisiana, was separated from the rest in 1804, and called the *Territory of Orleans*; and in 1812, it was admitted into the Union as an independent state, by the name of *Louisiana*.

GOVERNORS.

Under the Territorial Government.

William C. C. Claiborne, appointed 1804.

Under the Constitution.

Wm. C. C. Claiborne, elected 1812	Peter Derbigny, elected 1828
James Villere, do. 1816	[died Oct. 6, 1829.]
Thomas B. Robertson, do. 1820	A. Bauvais, Acting Gov. 1829
H. S. Thibodeaux, Acting Gov.	Jacques Dupré, do. 1830
Henry Johnson, elected 1824	

OUTLINES OF THE CONSTITUTION.

The Constitution of this state was formed in 1812.

The legislative power is vested in a Senate and House of Representatives, both together styled *The General Assembly of the State of Louisiana*.

The representatives are elected for two years on the first Monday, Tuesday, and Wednesday in July. Their number cannot be less than 25, nor more than 50; and they are apportioned according to the number of electors, as ascertained by enumeration every four years.

The members of the Senate are elected for four years; one half being chosen every two years, at the time of the election of the representatives. The state is divided into 16 senatorial districts, in each of which one senator is chosen.

The executive power is vested in a Governor, who is elected for the term of four years. The people give their votes for a governor at the time and place of voting for representatives and senators; and on the second day of the succeeding session of the General Assembly, the two Houses, by a joint ballot, elect for Governor, one of the two candidates who have the greatest number of votes. The Governor's term of office commences on the fourth Monday succeeding his election.

The General Assembly meets (since 1829, at *Donaldson* or *Donaldsonville*) annually, on the first Monday in January; except in the years of the election of President of the United States, when it meets on the 3d Monday in November.

The right of suffrage is possessed by every white, male citizen of the United States, of the age of 21 years, who has resided in the county in which he offers to vote one year next preceding the election, and who in the last six months prior to said election has paid a state tax.

The judiciary power is vested in a Supreme Court, which possesses appellate jurisdiction only, and such inferior courts as the legislature may establish. The judges are appointed by the Governor, with the advice and consent of the Senate, and hold their offices during good behavior.

GOVERNMENT.

Jacques Dupré, *Acting Governor*. [In July, 1830, A. B. Roman received a plurality of votes for Governor; election to take place in January, 1831.] Governor's salary \$7,500.

Benjamin Winchester,	2d do.	I. H. Overton,	7th do.
Charles Bushnell,	3d do.	Clark Woodruff,	8th do.
Lewis Esnault,	4th do.		

The *Supreme Court* sits in the city of *New Orleans*, for the Eastern District of the state, during the months of November, December, January,

February, March, April, May, June, and July; and for the Northern District, at *Opelousas* and *Attakapas*, during the months of August, September, and October. The *District Courts*, with the exception of the courts in the First District, hold, in each parish, two sessions during the year, to try causes originally instituted before them, and appeals from the Parish Courts. The *Parish Courts* hold their regular sessions in each parish on the first Monday in each month. The courts in the First District, composed of the District, Parish, and Criminal Courts, and Courts of Probate, are in session during the whole year, excepting the months of July, August, September, and October, in which they hold special courts when necessary.

SUGAR CANE.

Louisiana has invested in the cultivation of the sugar cane about \$30,000,000. Assuming 50,000 hhds. as an average crop, the sugar and molasses will give about 10 per cent. on the amount of capital employed. From this, however, various expenses are to be deducted, which will reduce the net profit to about 5 per cent.

COMMERCE OF NEW ORLEANS.

Imports into New Orleans from the Interior during Six Years.

The number of *steam-boats* built, to run upon the Mississippi and its numerous tributaries, from 1811 to the early part of the year 1830, is stated at 336; the number actually running in 1830, 213.

EDUCATION.

There are colleges at Jackson and New Orleans. In 1827, the legislature made a grant to each parish in the state of \$2,62½ to every voter, to be applied to the education of the indigent; the amount for any one parish not to exceed \$1,850, nor to fall short of \$800. In consequence of this act nearly \$40,000 are annually appropriated to the education of the poor.

XIX. TENNESSEE.

THE earliest settlements in this state were made between the years 1765 and 1770, by emigrants from North Carolina and Virginia.

The country was included within the limits of North Carolina till 1790, when it was placed under a separate territorial government, under the name of the "*Territory South of the Ohio*"; and in 1796, the inhabitants formed a Constitution, and Tennessee was admitted into the Union as an independent state.

GOVERNORS.

OUTLINES OF THE CONSTITUTION.

The Constitution of this state was formed, at Knoxville, in 1796.

The legislative authority is vested in a *General Assembly*, consisting of a Senate and House of Representatives; and the members of both houses are elected biennially on the first Thursday and Friday in August.

The number of representatives is 60, who are apportioned among the different counties according to the number of taxable inhabitants. The

number of senators cannot be less than one third, nor more than one half of the number of representatives.

The executive power is vested in a Governor, who is elected at the same time with the senators and representatives; and who holds his office for the term of two years, but is not eligible more than six years in any term of eight.

The General Assembly meets (at *Nashville*) biennially, on the third Monday in September, next following the election; and it may be called together, if necessary, at other times by the governor.

The right of suffrage is granted to every freeman of the age of 21 years, possessing a freehold in the county where he offers his vote, and to every freeman who has been an inhabitant of any one county in the state six months immediately preceding the day of election.

The judiciary power is vested in such superior and inferior courts, as the legislature may, from time to time, direct and establish. The judges are appointed by a joint ballot of both Houses, and hold their offices during good behavior.

Charles Scott,	<i>do.</i>	1808	Joseph Desha,	<i>do.</i>	1824
Isaac Shelby,	<i>do.</i>	1812	Thomas Metcalfe,	<i>do.</i>	1828

OUTLINES OF THE CONSTITUTION.

On the separation of Kentucky from Virginia, in 1790, a Constitution was adopted which continued in force till 1799, when a new one was formed instead of it; and this is now in force.

The legislative power is vested in a Senate and House of Representatives, which together are styled *The General Assembly of the Commonwealth of Kentucky*.

The representatives are elected annually, and are apportioned, every four years, among the different counties according to the number of electors. Their present number is 100, which is the highest number that the Constitution authorizes; 58 being the lowest.

The senators are elected for four years, one quarter of them being chosen annually. Their present number is 38; and they cannot exceed this number, nor fall short of 24.

The executive power is vested in a Governor, who is elected for four years, and is ineligible for the succeeding seven years after the expiration of

his term of office. At the election of Governor, a Lieutenant Governor is also chosen, who is Speaker of the Senate, and on whom the duties of the Governor devolve, in case of his absence or removal.

The representatives and one quarter of the members of the senate are elected annually by the people, on the first Monday in August; the governor is elected by the people, every fourth year, at the same time; and he commences the execution of his office on the fourth Tuesday succeeding the day of the commencement of the election at which he is chosen. The polls are kept open three days; and the votes are given openly, or *visd voce*, and not by ballot.

The General Assembly meets (at *Frankfort*) annually on the first Monday in November.

The Constitution grants the right of suffrage to every free, male citizen (people of color excepted), who has attained the age of 21 years, and has resided in the state two years, or in the county where he offers his vote, one year, next preceding the election.

The judiciary power is vested in a Supreme Court, styled the Court of Appeals, and in such inferior courts as the General Assembly may, from time to time, erect and establish. The judges of the different courts and justices of the peace, hold their offices during good behavior.

EXECUTIVE AND LEGISLATURE.

John M. Foster,	<i>Register of the Land Office,</i>	-	-	1,500
James Davidson,	<i>Treasurer,</i>	-	-	1,200

Senate.

One year.	Two years.	Three years.	Four years.
Wm. P. Fleming	James Allen	James Campbell	J. O. Bayseman
Benj. Hardin	Samuel Casey	Robert George	John B. Bibb
David K. Harris	John Faulkner	Wm. C. Payne	Wm. G. Boyd
John Hughes	Willis Green	Chr. A. Rudd	Geo. I. Brown
Wm. McMillan	John Griffin	L. J. Stephens	Wm. Conner
John Rodman	R. D. Maupin	J. R. Thornton	Wm. Cunningham
Francis Summers	John C. Ray	R. Wickliffe	Jas. Dejanett
Robert Taylor	Benj. Selby	Wm. Wood	R. S. Dougherty
	J. B. Thompson		Henry Owsley
	Garrett Wall		James Parks
	S. L. Williams		
	Cyrus Wingate		

Those in the first column have one year to serve; in the second, 2; in the third, 3; and in the fourth, 4. The senators and representatives receive \$2 each for every day's attendance, and \$2 for every 20 miles' travel.

JUDICIARY.

Court of Appeals.

		Salary.
George Robertson,	<i>Chief Justice,</i> - - -	\$1,500
Joseph R. Underwood,	<i>Second Judge,</i> - - -	1,500
Richard A. Buckner,	<i>Third do.</i> - - -	1,500
James W. Denny,	<i>Attorney General,</i> - - -	400

Circuit Courts.

The state is divided into 15 districts for the holding of the Circuit Courts. The Circuit Judges, who receive a salary of \$1,000 each, are as follows.

William P. Roper,	<i>1st District.</i>	William L. Kelly,	<i>9th District.</i>
H. P. Brown, - -	<i>2d do.</i>	Richard French,	<i>10th do.</i>
Thomas M. Hickey,	<i>3d do.</i>	S. W. Robbins,	<i>11th do.</i>
Daniel Mayes, - -	<i>4th do.</i>	J. L. Bridges,	<i>12th do.</i>
Henry Piccle, - -	<i>5th do.</i>	P. I. Booker,	<i>13th do.</i>
H. P. Brodnax, - -	<i>6th do.</i>	Alney McLean,	<i>14th do.</i>
Benj. Shackelford,	<i>7th do.</i>	Joseph Eve,	<i>15th do.</i>
Benj. Monroe, - -	<i>8th do.</i>		

County Courts are held by justices of the peace, who are paid by fees. Any three justices of the peace may hold a court once in every month, except the month when the Circuit Court is held.

BANKS.

The Bank of the United States has Offices of Discount and Deposit at *Lexington* and *Louisville*.

There are two banks chartered by the state, namely, the *Bank of Kentucky* and the *Bank of the Commonwealth of Kentucky*, at *Frankfort*, formerly having branches in other places; but they have withdrawn all their branches, and are now winding up their accounts. The state owns a part of the stock of the former of the two banks, and the whole of that of the latter.

TAXES.

Amount of taxable property in the state, in lands, slaves, houses, carriages, &c., according to returns made to the auditor, \$104,647,736, paying a tax of 6½ cents on \$100; yielding, - - - \$65,494 82

Tax on studs according to income; 1,875 in number, - - - 4,100 72

Tax on tavern-keepers, \$10 each; 349 in number, - - - 3,490 00

Total tax \$72,995 55

PENITENTIARY AND HOSPITALS.

The state *Penitentiary*, at Frankfort, contained, in September, 1830, 101 convicts. This institution was formerly an expense to the state; but since 1825, under the management of its present keeper (Mr. Joel Scott), it has more than supported itself.

At Lexington there is a *Lunatic Asylum*; at Danville, an *Asylum for the Deaf and Dumb*; at Louisville and Smithland, on the Ohio, *Hospitals* for sick and disabled boatmen.

INTERNAL IMPROVEMENT.

A canal about 2 miles long, around the Falls of the Ohio, at Louisville, is in progress, and is expected to be completed before the end of the year 1830. Of the Turnpike Road (macadamized), from Maysville to Lexington, 5 miles are now completed, and the greater part of the remainder is under contract. A rail road is also projected from Lexington to the Ohio.

EDUCATION.

Transylvania University at Lexington (containing, in 1830, 143 undergraduates, 62 in the preparatory department, 200 medical students, and 19 law students), is patronized by the state; St. Joseph's College, at Bardstown (150 students), by the Catholics; Centre College, at Danville, by the Presbyterians; Augusta College, at Augusta (35 students), by the Methodists; Cumberland College, at Princeton, by the Cumberland Presbyterians; and Georgetown College, at Georgetown (35 students), by the Baptists.

Many years since the state appropriated 6,000 acres of land for the purpose of endowing an academy in each county; but the appropriations have been, for the most part, so managed, that little public benefit has been derived from them. The legislature has several times taken steps towards introducing a system of common schools; but nothing effectual has yet been accomplished. A Literary Fund was created, some years since, from a portion of the profits arising from the Bank of the Commonwealth; but unfortunately the state has of late been annually encroaching upon this Fund to defray the public expenses.

XXI. OHIO.

THE first permanent settlement of Ohio was commenced at Marietta, in 1788; in 1789, the country was put under a territorial government, and called the *Western Territory*, which name was afterwards altered to the *Territory Northwest of the Ohio*; and in 1802, it was erected into an independent state.

GOVERNORS.

1789 Arthur St. Clair, *Governor* till the end of the territorial government.

Under the Constitution.

Edward Tiffin, <i>elected</i> 1803	Thomas Worthington, <i>elected</i> 1814
Thomas Kirker, <i>Acting Gov.</i> 1807	Ethan Allen Brown, <i>do.</i> 1818
Samuel Hunting, <i>elected</i> 1808	Allen Trimble, <i>Acting Gov.</i> 1822
Return J. Meigs, <i>do.</i> 1810	Jeremiah Morrow, <i>elected</i> 1822
Othniel Looker, <i>Acting Gov.</i> 1814	Allen Trimble, <i>do.</i> 1826

OUTLINES OF THE CONSTITUTION.

The Constitution of this state was formed, at Chillicothe, in 1802.

The legislative power is vested in a Senate and House of Representatives, which together are styled *The General Assembly of the State of Ohio*.

The representatives are elected annually on the second Tuesday in October; and they are apportioned among the counties according to the number of white, male inhabitants above 21 years of age. Their number cannot be less than 36, nor more than 72.

The senators are chosen biennially, and are apportioned according to the number of white, male inhabitants of 21 years of age. Their number cannot be less than one third, nor more than one half of the number of representatives.

The executive power is vested in a Governor, who is elected by the people for two years, on the second Tuesday in October; and his term of service commences on the first Monday in December.

The General Assembly meets annually (at *Columbus*), on the first Monday in December.

The right of suffrage is granted to all white, male inhabitants, above the age of 21 years, who have resided in the state one year next preceding the election, and who have paid, or are charged with a state or county tax.

The judicial power is vested in a Supreme Court, in Courts of Common Pleas for each county, and such other courts as the legislature may, from time to time, establish. The judges are elected by a joint ballot of both Houses of the General Assembly for the term of 7 years.

GOVERNMENT.

Allen Trimble, *Governor*, (term of office expires on the first Monday in December, 1830); salary \$1,200.

The senators (36) and representatives (72) receive \$3 a day each, and 8 cents a mile for travel.

JUDICIARY.

Supreme Court.

		Salary.
Peter Hitchcock,	<i>Chief Judge,</i>	\$1,200
Joshua Collet,	<i>Associate Judge,</i>	1,200
Elijah Hayward,	<i>do.</i>	1,200
Henry Brush,	<i>do.</i>	1,200

Courts of Common Pleas.

For the holding of the Courts of Common Pleas, the state is divided into nine districts or circuits, in each of which there is a presiding judge, who holds annually three courts in each county within his district. The salary of each of these judges is \$1,000. The names of the present presiding judges are as follows.

George B Holt,	1st Circuit.	George I. Smith,	6th Circuit.
F. A. Grimké,	2d do.	E. Lane,	7th do.
Reuben Wood,	3d do.	Thomas Irwin,	8th do.
Alexander Harper,	4th do.	G. P. Torrence,	9th do.
J. H. Hallock,	5th do.		

These judges are severally assisted by three associate judges in each county, who receive \$2 a day during their attendance at court.

BANKS.

The Bank of the United States has an office of Discount and Deposit at Cincinnati; and under the authority of the state are the following banks, namely, the Banks of Chillicothe, Marietta, St. Clairsville, Steubenville, Mount Pleasant, and Canton; Franklin Bank of Columbus, at Columbus; Lancaster Ohio Bank, at Lancaster; Urbana Banking Company, at Urbana; Bank of Scioto, at Portsmouth; and Western Reserve Bank, at Warren.

The actual capital of the banks chartered by the state, which differs much from their nominal capital, cannot be easily ascertained, as they are not obliged by law to publish the state of their funds.

INTERNAL IMPROVEMENT.

The governor of Ohio, in his Address to the legislature, at a late session, gives the following view of the progress of internal improvement, and of the finances of the state.

"The great work of internal communication in this state [the Canal from the Ohio to Lake Erie] advances towards completion with a firmness commensurate with its grandeur, and the interests it is intended to promote. The residue of the entire line of Canal is now under contract, to be com-

pleted in 1831. As the work has progressed towards its Southern termination, the benefits of navigation from the Lake have been extended into the interior, and sensibly felt. It has now advanced near to Newark, a distance of 180 miles; it may be expected to approach Chillicothe in 1830, and in the following year to the Ohio river; making with the *Miami Canal*, now completed, 375 miles of artificial canal navigation in the state."

"There remained in the treasury of Ohio on the 15th, of November last, \$159,250; \$90,000 thereof, being a School Fund, is drawing 6 per cent. interest. This fund, the interest upon which is guarantied by the state, is daily increasing; and, by the first of January next, will probably amount to \$150,000. The Sinking Fund \$60,000 remains unimpaired; to which may be added the surplus revenue of 1829 and 1830, say \$30,000; making a total of \$240,000, that will remain in the treasury."

The *Miami Canal*, which is completed from Cincinnati to Dayton, 65 miles, has 22 locks, and cost \$746,000, about \$11,000 a mile. It extends through the richest portion of the state, and is the channel of an extensive trade.

STATISTICS OF OHIO. [From the "Ohio State Journal."]

	1826.	1829.
Quantity of land (assessed) . . . acres	13,763,574	15,878,171
Value of lands and buildings	\$35,217,035	41,193,000
Value of town lots and buildings	4,082,114	8,230,985
Horses (No. 1826, 131,956; 1829, 175,319) Value	4,878,240	7,012,760
Cattle (No. 1826, 252,544; 1829, 719,596) do.	2,028,852	5,756,768
Merchants' Capital	2,162,118	3,950,156
Carriages (Number, 137) Value		25,310
State Tax	106,669	193,609
County Tax	187,563	173,903
Road Tax	91,846	71,950
Township Tax	22,231	52,096
School Tax	19,618	47,892

EDUCATION.

The principal literary seminaries in this state are the University of Ohio, at Athens; Miami University, at Oxford; Western Reserve College, at Hudson; Kenyon College, at Gambier; and the Medical College of Ohio, at Cincinnati.

In 1825, a law was passed by which a tax of one twentieth of one per cent., or a half mill on a dollar, estimated *ad valorem* upon the general tax list of the state, was levied and appropriated to the support of common schools.

XXII. INDIANA.

VINCENNES, in Indiana, was settled by French emigrants from Canada, near the beginning of the last century, and long remained a solitary village. But few settlements were made in the country till the commencement of the present century; since which time its increase in population has been very rapid.

In 1800, Indiana was erected into a territorial government; in 1816, its Constitution was formed, and it was admitted into the Union as an independent state.

GOVERNORS.

William H. Harrison, *appointed Governor* of Indiana Territory, 1800.

Under the Constitution.

Jonathan Jennings,	<i>elected</i>	1816		James B. Ray,	<i>elected</i>	1825
William Hendricks,	<i>do.</i>	1822				

OUTLINES OF THE CONSTITUTION.

The executive power is vested in a Governor, who is elected by the people for a term of three years, and may be once reëlected. At every election of Governor, a Lieutenant Governor is also chosen, who is President of the Senate, and on whom, in case of the death, resignation, or removal of the governor, the powers and duties of governor devolve.

The legislative authority is vested in a *General Assembly*, consisting of a Senate, the members of which are elected for three years, and a House of Representatives, elected annually.

The number of representatives can never be less than 36, nor more than 100; and they are apportioned among the several counties according to the number of white, male inhabitants above 21 years of age. The number of senators, who are apportioned in like manner, cannot be less than one third, nor more than one half of the number of representatives.

The representatives and one third of the members of the senate, are elected annually on the first Monday in August; and the Governor is chosen on the same day, every third year.

The General Assembly meets annually (at *Indianapolis*) on the first Monday in December.

The right of suffrage is granted to all male citizens of the age of 21 years or upwards, who may have resided in the state one year immediately preceding an election.

The judiciary power is vested in one Supreme Court, in Circuit Courts, and in such other inferior courts as the General Assembly may establish. The Supreme Court consists of three judges; and each of the Circuit Courts consists of a president and two associate judges. The judges are all

appointed for the term of seven years. The judges of the Supreme Court are appointed by the governor, with the consent of the Senate; the presidents of the Circuit Courts, by the legislature; and the associate judges are elected by the people.

GOVERNMENT.

James B. Ray, *Governor*; (term of office expires the first week in December, 1831;) salary \$1,000.

Milton Slapp, *Lieutenant Governor*; pay \$2 a day during the session of the General Assembly.

Members of the Senate.

Daniel C. Lane (<i>deceased.</i>)	John De Pauw	John Sering
John Daniel	John M. Lemon	William C. Linton
Thomas Givens	Stephen C. Stevens	Joseph Orr
John Ewing	John Watts	Daniel Worth
William Graham	John T. McKinney	— Blair
David H. Maxwell	Newton Claypool	John G. Clendenin
Abel Lomax	James Gregory	David Robb
Amaziah Morgan.	Calvin Fletcher	

The present number of senators is 23; representatives, 62. Speaker, Ross Smiley. Pay of the members of both Houses \$2 a day each.

JUDICIARY.

Judges of the Supreme Court; James Scott, Jesse Holman, and Isaac Blackford. Salary of each \$700.

President Judges of the Circuit Courts; John R. Porter, John Law, J. R. E. Goodellet, John F. Ross, B. F. Morris, Miles C. Eggleston, and Charles Test. Salary of each \$700.—The Associate Judges receive each \$2 a day.

EDUCATION.

A college has been established at Bloomington, and one 36th part of the public lands has been appropriated for the support of schools.

XXIII. ILLINOIS.

THIS country was explored by *La Salle*, an enterprising French traveller, in the latter part of the 17th century; and French settlements were formed at Kaskaskia, Cahokia, and some other places. Though these settlements flourished, in some degree, for a time, yet they never became very important; and at the peace of Paris, in 1763, the country to the east of the Mississippi was ceded by France to Great Britain.

Almost all the settlements which have been formed by the citizens of the United States, have been begun since 1800. In 1809, Illinois was erected into a territorial government: in 1818, the inhabitants formed a constitution, and Illinois was admitted into the Union as an independent state.

GOVERNORS.

Ninian Edwards *appointed*, 1809, *Governor* of the Territory of Illinois.

Under the Constitution.

Shadrach Bond,	<i>elected</i>	1818	Ninian Edwards,	<i>elected</i>	1826
Edward Coles,	<i>do.</i>	1822			

OUTLINES OF THE CONSTITUTION.

The legislative authority is vested in a *General Assembly*, consisting of a Senate, the members of which are elected for four years; and of a House of Representatives, elected biennially.

"The number of representatives shall not be less than 27, nor more than 36, until the number of inhabitants within the state shall amount to one hundred thousand; and the number of senators shall never be less than one third, nor more than one half of the number of representatives."

The executive power is vested in a Governor, who is elected by the people for four years; and he is not eligible for more than four years in any term of eight years. At the election of Governor, a Lieutenant Governor is also chosen, who is Speaker of the Senate; and on whom, in case the governor vacates his office, the duties of governor devolve.

The representatives and one half of the senators are elected biennially on the first Monday in August; and the governor is chosen, every fourth year, at the same time.

The General Assembly meets every other year (at *Vandalia*), on the first Monday in the December next following the election; and the governor is authorized to convene it, on extraordinary occasions, at other times.

All white, male inhabitants, above the age of 21 years, having resided in the state six months next preceding an election, have the rights of electors.

The judicial power is vested in a Supreme Court, and in such inferior courts as the General Assembly may establish. The judges are appointed by a joint ballot of both branches of the General Assembly, and hold their offices during good behavior.

GOVERNMENT.

Ninian Edwards, *Governor*; (term of office expires on the first Monday in December, 1830); salary \$1,000.

The present number of senators is 18; representatives, 36. Pay of each member usually \$3 a day.

- JUDICIARY.

Supreme Court.

			Salary
William Wilson,	-	<i>Chief Justice,</i>	- - - \$1,000
Samuel D. Lockwood,	-	<i>Associate Judge,</i>	- - - 1,000
Thomas C. Browne,	-	<i>do.</i>	- - - 1,000
Theophilus W. Smith,	-	<i>do.</i>	- - - 1,000
R. M. Young,	-	<i>Judge for the Circuit north of Illinois river.</i>	

The judges of the Supreme Courts officiate also as judges of the Circuit Courts.

EDUCATION.

A college has recently been established at Jacksonville, a little to the south of the river Illinois.

XXIV. MISSOURI.

MISSOURI formed a part of the extensive country of Louisiana, which was purchased of France by the United States in 1803. Though French settlements were commenced at St. Louis and St. Genevieve as early as 1764, yet at the time when the country was purchased, this portion of it contained but few inhabitants.

In 1804, this country was separated from the rest of Louisiana and erected into a territorial government, by the name of the *Territory of Louisiana*, afterwards altered to the *Territory of Missouri*; and in 1821, it was admitted into the Union as an independent state.

GOVERNORS.

Under the Territorial Government.

James Wilkinson,	<i>appointed</i>	1805	William Clarke,	<i>appointed</i>	1813
Meriwether Lewis,	<i>do.</i>	1807			

Under the Constitution.

Alexander McNair,	<i>elected</i>	1820	John Miller,	<i>elected</i>	1828
Frederick Bates,	<i>do.</i>	1824			

OUTLINES OF THE CONSTITUTION.

The constitution of this state was formed at Kaskaskia, in 1820.

The legislative power was vested in a *General Assembly*, consisting of a Senate and a House of Representatives.

The representatives are chosen every second year. Every county is entitled to at least one representative; but the whole number can never exceed 100.

The senators are elected for four years, the seats of one half being vacated every second year. The constitutional number is, not less than 14, nor more than 33. They are chosen by districts, and are apportioned according to the number of free, white inhabitants.

The elections for representatives and senators are held biennially on the first Monday in August.

The executive power is vested in a Governor, who is elected for four years, on the first Monday in August; and he is ineligible for the next four years after the expiration of his term of service.

At the time of the election of Governor, a Lieutenant Governor is also chosen, who is, by virtue of his office, President of the Senate.

The Legislature meets every second year (at the *City of Jefferson*), on the first Monday in November.

The right of suffrage is granted to every white, male citizen, who has attained the age of 21 years, and has resided in the state one year before an election, the last three months thereof being in the county or district in which he offers his vote.

The judicial power is vested in a Supreme Court, in a Chancellor, Circuit Courts, and such other inferior tribunals as the General Assembly may, from time to time, establish.

The judges are appointed by the governor, by and with the advice and consent of the Senate; and they hold their offices during good behavior, but not beyond the age of 65 years.

GOVERNMENT.

John Miller, *Governor*; (term of office expires on the 3d Monday in November, 1832); - - - salary \$1,500
Daniel Dunklin, *Lieutenant Governor*.

The present number of Senators, 13; Representatives, 49. Pay of the Lieutenant Governor, and each of the Senators and Representatives \$3 a day during the session of the legislature.

JUDICIARY.

Supreme Court.

		Salary
Matthias McGirk,	<i>Presiding Judge,</i> - - -	\$1,100
George Tompkins,	<i>Associate Judge,</i> - - -	1,100
Robert Wash,	<i>do.</i> - - -	1,100

Circuit Courts.

Judges. W. C. Carr, D. Todd, J. D. Cook; one vacancy. Salary of each \$1,000.

.* The Bank of the United States has an Office of Discount and Deposit at *St. Louis*. There is no other bank in the state.

EDUCATION.

A college has been founded in this state, and 9 academies incorporated. A portion of the public lands has been granted by Congress for the support of schools; but no provision for education has been made by the legislature of the state, except the passing of some laws relating to the lands granted by Congress.

XXV. DISTRICT OF COLUMBIA.

THE District of Columbia is a tract of country 10 miles square, situated on both sides of the Potomac, comprising two counties, Washington and Alexandria. It was ceded to the United States in 1790, and is under the immediate government of Congress. The city of Washington, which is included within this District, became the seat of the government of the United States in 1810; and it is the residence of the President and the other chief executive officers, of whom an account has been already given.

The Congress of the United States meets every year, at Washington, on the first Monday in December, unless it is otherwise provided by law, (see page 134); and the Supreme Court of the United States meets here, annually, on the second Monday in January (see pages 140 and 144).

JUDICIARY.

The *Circuit Court* for the District of Columbia, is held at Washington on the first Monday in May and the third Monday in December; and at Alexandria on the second Monday in April and the fourth Monday in November; and the *District Court*, on the first Mondays in June and December.

Circuit Court.

BANKS.

**. The Bank of the United States has an office of Discount and Deposit at Washington; and besides this, there are 13 other banks in the District, at Washington, Georgetown, and Alexandria.

EDUCATION.

Columbian College, a seminary chiefly under the direction of the Baptist denomination, is situated near Washington; Georgetown College, a Roman Catholic institution, at Georgetown; and an Episcopal Theological Seminary in the vicinity of Alexandria.

XXVI. FLORIDA.

FLORIDA was conquered by the Spaniards as early as 1639. In 1763, it was ceded to Great Britain, and divided into *East* and *West Florida*; but in 1781, it was again recovered by Spain.

In 1821, it was ceded by Spain to the United States; and in 1822 both parts, *East* and *West Florida*, were formed into one government or province, under the name of *The Territory of Florida*.

GOVERNMENT.

William P. Duval, *Governor*, first appointed in 1822; reappointed in 1825 and 1828; salary - - - - - \$2,500

James D. Westcott, Jun., *Secretary*; salary - - - - - 1,500

The Legislative Council consists of 16 members, and meets at *Tallahassee* on the first Monday in January.

JUDICIARY.

			Salary.
Joseph L. Smith,	Judge,	for the Eastern District,	\$1,500
T. Randall,	do.	Middle do.	1,500
H. M. Brackenridge,	do.	Western do.	1,500
James Webb,	do.	Southern do.	1,500

BANK.

Bank of Florida at Tallahassee; capital - - - - - \$600,000

XXVII. MICHIGAN TERRITORY.

DETROIT, the capital of Michigan, was settled by the French about the year 1670. In 1805, the country was erected by the Congress of the United States into a separate territorial government; in 1812, it was taken by the British under General Brock; and in 1813, it was recovered by the army of the United States under General Harrison.

GOVERNORS.

William Hull, *appointed* 1805 | Lewis Cass, *appointed* 1814

GOVERNMENT.

Lewis Cass,	<i>Governor</i> ;	salary	\$2,000
William Woodbridge,	<i>Secretary</i> ;	do.	1,000

The Legislative Council consists of 13 members, who are elected for two years.

Judges. William Woodbridge, Solomon Sibley, Henry Chapman, and James D. Doty. Salary of each \$1,200.

BANKS.

Bank of Michigan, and Farmers' and Mechanics' Bank, at Detroit.

XXVIII. ARKANSAS TERRITORY.

THIS country was separated from the Territory [now State] of Missouri, in 1819, and erected into a separate government.

GOVERNORS.

James Miller, *appointed* 1819 | John Pope, *appointed* 1829
George Izard, *do.* 1825 |

GOVERNMENT.

John Pope,	<i>Governor</i> ;	salary	\$2,000
William Fulton,	<i>Secretary</i> ;	do.	1,000

There is a Legislative Council consisting of five members; and a House of Representatives comprising 23 members, who are elected biennially, on the first Monday in August; and they meet in the following October.

Judges. Benjamin Johnson, Thomas P. Eskridge, William Trimble, and J. W. Bates. Salary of each \$1,200.

GOVERNORS OF THE SEVERAL STATES AND TERRITORIES,
with the Commencement and Expiration of their respective Terms of Office.

Maine,	Jonathan G. Hunton,	Jan. 1830,	Dec. 1830.
New Hampshire,	Matthew Harvey,	June, 1830,	June, 1831.

With respect to those Governors who have been elected more than *once*, the commencement of the term for which they were *last* elected, is here given.

S. E. Smith has been chosen Governor of the state of Maine for the year commencing January 1, 1831; *Mr. Reynolds* has been chosen Governor of the state of Illinois for the term of four years, beginning January 1, 1831; *General McArthur* is supposed to be chosen Governor of the state of Ohio for two years, commencing in December, 1830; and *E. T. Throop*, of the state of New York, for two years, beginning January 1, 1831; and *A. B. Roman* has received a plurality of votes for Governor of the state of Louisiana for the term of four years, commencing January, 1831.

The governors of the Territories are appointed by the President of the United States, with the consent of the Senate, for the term of three years.

POPULATION OF SEVERAL TOWNS IN THE UNITED STATES.

The *Fifth Census* of the United States is to be completed on or before the 1st of December, 1830. Copious details of the results of this Census may be expected in the next volume of this Almanac. The Population of several Towns for the Census of 1830, is here given, as it has been unofficially published in the Newspapers.

* The population of Providence has been stated at *about* 17,000.

† The population of the city of New York as here given for 1830, is founded on the returns from 9 wards. and an *estimate* of the population of the other 5 wards.

BRITISH AMERICAN COLONIES.

LOWER CANADA.

THE first European settlement in Canada was made by the *French*, in 1608. In 1759, Quebec was taken by the *English*, under General Wolfe; and in 1763, the whole of Canada was ceded by France to Great Britain.

BRITISH GOVERNORS.

	Appointed.		Appointed.
James Murray,	1763	Sir J. H. Craig,	1807
Paulus Em. Ervine, <i>President</i> ,	1766	Hon. Th. Dunn, <i>President</i> ,	1811
Guy Carleton,	1766	Sir George Prevost, . . .	1811
Hector T. Cramaché, <i>Pres.</i>	1770	Sir Gordon Drummond, .	1815
Guy Carleton,	1774	John Wilson, <i>Administrator</i> ,	1816
Frederick Haldimand, . .	1778	Sir J. C. Sherbrooke, . .	1816
Henry Hamilton, <i>Lt. Gov.</i>	1784	Duke of Richmond, . . .	1818
Henry Hope, <i>do.</i>	1785	Hon. John Monk, <i>President</i> ,	1819
Lord Dorchester, . . .	1786	Sir Peregrine Maitland, .	1820
Alured Clark, <i>Lt. Gov.</i>	1791	Earl of Dalhousie, . . .	1820
Lord Dorchester, . . .	1793	Sir Frs. N. Burton, <i>Lt. Gov.</i>	1824
Robert Prescott, . . .	1796	Earl of Dalhousie, . . .	1825
Sir Robert S. Milnes, . .	1796	Sir James Kempt, . . .	1828
Hon. Th. Dunn, <i>President</i> ,	1803	Lord Aylmer,	1830

GOVERNMENT.

The executive power is vested in a Governor and an Executive Council of 10 members, all appointed by the king of Great Britain. The Legislature, or Provincial Parliament, is composed of a Legislative Council of 28 members appointed by the king, and a House of Assembly of 50 members, elected by the people.

Lord Aylmer, *Governor General.*
 Sir Francis N. Burton, *Lieutenant Governor.*
 Jonathan Sewell, *Chief Justice.*

Other Provinces.

SWEDEN AND NORWAY.

KING AND ROYAL FAMILY.

CHARLES XIV. (formerly *Marshal Bernadotte*), King of Sweden and Norway; b. Jan. 26, 1764: elected *Crown Prince* of Sweden, August 21, 1810; succeeded to the throne, on the death of *Charles XIII.*, Feb. 5, 1818; m. Aug. 16, 1798, *EUGENIE BERNARDHINE DE CLARY*, b. Nov. 8, 1781:—Issue:—

Joseph Francis OSCAR, *Crown Prince*; b. July 4, 1799; m. June 8, 1823, to *Princess Josephine* of *Leuchtenberg*, b. March 14, 1807:—Issue:—

1. *Charles Louis Eugene*, Duke of *Scania*; b. May 3, 1826.
2. *Francis Gustavus Oscar*, Duke of *Upland*; b. June 18, 1827.
3. *Oscar Frederick*, Duke of *East Gothland*; b. Jan. 21, 1829.

GOVERNMENT.

Sweden and Norway, though under the government of one and the same king, who is a limited monarch, have different Constitutions.

The Diet or legislative body of Sweden consists of four orders, 1st, nobles, hereditary; 2dly, bishops, *ex officio*, and clergy; 3dly, merchants or citizens; 4thly, peasants or agriculturists. Each body deliberates separately. The Diet has the right of legislation and taxation, and the superintendence of the finances; but the king has an unconditional veto.

The *Council of State*, composed of two ministers, six Counsellors of State, the Chancellor of the Court, as permanent members, and reporters (*rapporteurs*) form the ministry of the king. The two Ministers of State, the Marshal of the Empire, and Lords of the Empire, are the highest officers of the kingdom.

Council of State.

Count de Gyllenborg,	<i>Minister of Justice.</i>
Count de Wetterstedt,	<i>Minister of Foreign Affairs and of the Department of the Colonies.</i>
Count de Rosenblad,	<i>Lord of the Empire, Counsellor of State.</i>
Count de Moerner,	<i>do.</i>
Count de Loewenhielm,	<i>do.</i>
Baron de Nordin,	<i>do.</i>
Count de Ugglas,	<i>do.</i>
M. de Schulzenheim,	<i>Chancellor of the Court.</i>

Reporters (Rapporteurs.)

M. de Bergensköld,	<i>Chancellor of Justice.</i>
M. de Kulberg,	<i>Secretary for Ecclesiastical Affairs.</i>
M. de Danckwardt,	<i>Secretary for the Home Department.</i>
M. de Skogman,	<i>Secretary of Finance and Commerce.</i>
M. de Nordenfalk,	<i>Secretary of War, ad interim.</i>
Major Gen. Count de Brahe,	<i>Commander of the Army.</i>
Vice-Admiral M. de Klint,	<i>Commander of the Navy.</i>

His Royal Highness, the Crown Prince, *Grand Admiral of Sweden, Chief Director of the administration of the Navy, and Grand Master of Artillery.*
 Count de Fleming, *Marshal of the Empire, and Head of the Royal Court.*

NORWAY.

The Constitution of Norway combines the principles of monarchy and democracy. Nobility is abolished, and the legislative body or Diet, called the *Storting*, consists of two houses.

The *Council of State*, composed of the Governor of the kingdom, the ministry of state, and counsellors of state, form the ministry of the kingdom of Norway. The secretaries of state are not members. One part of the ministry, namely the minister of state and two counsellors of state, who change alternately every year, reside at the royal court at Stockholm: the others compose the regency at Christiania.

Part of the Council of State at Stockholm.

M. Löwenskjöld,	Minister of State.
M. Motzfeld,	Counsellor of State.
M. Krog,	do.
M. Due, Secretary of State.					

Part of the Council of State at Christiania.

Count de Platen, *Governor General of the Kingdom.*

M. Collet, *Head of the Departments of Finance, Commerce, and Customs.*

<i>Counsellors of State.</i>	M. Dirricks,	<i>Head of the Department of Religion.</i>
	M. de Fasting,	<i>Head of the Departments of the Navy and the Army.</i>
	M. de Holst,	<i>Head of the Department of Justice and Police.</i>
	M. Falbe,	<i>Head of the Department de la revision.</i>
	M. Vogt,	
	Stoud Platow,	<i>Secretary of State.</i>

RUSSIA.

EMPEROR AND IMPERIAL FAMILY.

NICHOLAS, Emperor of all the Russias, and King of Poland; b. July 6, 1796; m. July 13, 1817, ALEXANDRA (formerly *Charlotte*), daughter of the King of Prussia, b. July 13, 1798; succeeded his brother *Alexander*, Dec. 1. 1825:—Issue:—

- | | |
|---|--|
| 1. ALEXANDER, <i>Hereditary Prince</i> ; b. April 29, 1818. | |
| 2. <i>Mary</i> ; b. August 18, 1819. | 4 <i>Alexandra</i> ; b. June 24, 1825. |
| 3. <i>Alga</i> ; b. Sept. 11, 1822. | 5. <i>Constantine</i> ; b. Sept. 21. 1827. |

Princes of the Blood.

Constantine; b. May 8. 1779; renounced his right to the throne, Jan. 26, 1822, with the consent of the Emperor Alexander, and confirmed his renunciation, Dec. 8, 1825; m. May 24, 1820, *June*, Princess of Lowicz.

Maria, Princess of Saxe-Weimar; b. Feb. 16, 1786.

Anne, Princess of Orange; b. Jan. 18. 1795.

Michael; b. Feb. 9, 1798; m. Feb. 20, 1824, *Paulina*, niece of the King of Wurtemberg, b. Jan. 9, 1807:—Issue; *Maria*, *Elizabeth*, and *Catherine*.

GOVERNMENT.

The government of Russia is an absolute hereditary monarchy; and in the succession to the throne females are not excluded. The government is con-

ducted by a Council of the Empire, the Ministry, and a Senate; but there is no representative body. The late Emperor Alexander gave the Senate the right of remonstrating against any ukase or edict contrary to law. It is a body partly deliberative and partly executive, and forms the highest judicial tribunal of the empire. It is divided into 9 departments or sections, of which six, comprising 62 members, hold their sittings at St. Petersburg, and three sections, with 26 members, at Moscow. The ministers of the great departments are responsible to the Senate. The established religion is that of the Greek Church, but all others are tolerated.

COUNCIL OF THE EMPIRE.

Count Victor Kotschoubey (*Actual Privy Counsellor*), *President of the Council.*

M. de Paschkoff, *Pres. of the Department of Legislation; (Grand-Veneur.)*

Count Peter de Tolstoi, *General of Cavalry, Pres. Dep. of Military Affairs.*

M. Nicol de Mordwinoff (*Admiral*), *President of the Department of Civil and Ecclesiastical Affairs.*

Prince Alexis de Kourakin (*Actual Privy Counsellor*), *President of the Department of Political Economy.*

MINISTRY OF STATE.

(*Ministres à Portfeuille.*)

His Royal Highness Duke Alexander of Wurtemberg, *General of Cavalry, Director General of the Department of Canals, Bridges, and Roads.*

Prince Peter de Volkonsky, *General of Infantry, Aide-de-Camp General, Minister of the Imperial Court, and Minister des Apanages.*

Prince Alexander Galitzyn, (*Actual Privy Counsellor*), *Director General of the Post-Office of the Empire.*

Count de Nesselrode, *Vice-Chancellor, and Minister of Foreign Affairs.*

Count Tchernitcheff, *General of Cavalry, Minister of War.*

Prince Charles de Liven, *General of Infantry, Minister of Public Instruction.*

M. Georges de Kankrin, *General of Infantry, Minister of Finance.*

M. de Zakrefsky, *General of Infantry, Minister of the Home Department.*

M. Anthony de Moller, (*Admiral*), *Minister of the Navy.*

M. Alexis Khitroff, *Privy Counsellor, Comptroller General of the Empire.*

Prince Alexis Dolgorouky, *Privy Counsellor, Attorney General, and Minister of Justice.*

His Imperial Highness the Grand Duke Constantine, *Commander in Chief of the Army of Poland.*

DENMARK.

KING AND ROYAL FAMILY.

FREDERICK VI, King of Denmark, Duke of Pomerania; b. Jan. 28, 1768; declared co-regent with his Father Christian VII, April 14, 1784, succeeded to the throne March 13, 1808; m. July 31, 1790, SOPHIA FREDERICA, niece of the Elector of Hesse-Cassel, b. Oct. 28, 1767: Issue:—

1. *Caroline*; b. Oct. 28, 1793; m. to Prince Frederick Ferdinand, Aug. 1, 1829.

2. *Wilhelmina*; b. Jan. 17, 1808; m. to Prince Frederick, Nov. 1. 1820.

CHRISTIAN FREDERICK, *Crown Prince*, cousin to the King; b. Sept. 18, 1786; m. (1) Feb. 18, 1806, *Charlotte Frederica*, Princess of Mecklenburg;

(—Issue; 1. *Frederick*; b. Oct. 6, 1808; m. *Princess Wilhelmina*, Nov. 1, 1828; m. (II) May 22, 1815, *Carolina Amelia*, daughter of the Duke of Holstein-Augustenburg:—Issue; 2. *Julianna*; 3. *Charlotte*; 4. *Frederick Ferdinand*, b. Nov. 22, 1792; m. the *Princess Caroline* Aug. 1, 1829.

GOVERNMENT.

Denmark has been since 1660, in law, an absolute monarchy of the most unqualified kind; the will of the King is supreme, in both civil and ecclesiastical affairs; but in religion he must be of the Confession of Augsburg. The crown is hereditary in the male line.

PRIVY MINISTRY OF THE KING.

Count de Schimmellmann, *Privy Minister of State, Head of the Department of Foreign Affairs.*

M. de Moësting, *Privy Minister of State for Finance, and President of the Chamber of Finance.*

M. de Sehestedt, *Privy Minister of State, Head of the Chamber of Commerce and Customs.*

Count de Moltke, *Privy Minister of State, President of the German Chancery.*

M. Malling, *Privy Minister of State for Public Instruction.*

M. de Steemann, *Privy Minister of State and Justice, President of the Danish Chancery.*

NETHERLANDS.

KING AND ROYAL FAMILY.

WILLIAM, King of the Netherlands, Prince of Orange-Nassau, and Grand Duke of Luxemburg; b. Aug. 24, 1772; succeeded his father in his hereditary possessions in Germany, April 9, 1806; declared Sovereign Prince of the Netherlands Dec. 3, 1813; assumed the crown March 15, 1815; m. Oct. 1, 1791, **WILHELMINA**, sister of the King of Prussia, b. Nov. 18, 1774: Issue:—

1. **WILLIAM**, *Prince Royal and Prince of Orange*; b. Dec. 6, 1792; m. Feb. 21, 1816, *Anne*, sister of the Emperor of Russia, b. Jan. 18, 1795:—Issue; *William*, b. Feb. 18, 1817; *Alexander*, b. Aug. 2, 1818; *Frederick*, b. June 13, 1820; *Sophia*, b. April 8, 1824.

2. *Frederick*; b. Feb. 28, 1797; m. May 21, 1825, *Louisa*, 3d daughter of the king of Prussia:—Issue; *Alexandrina*, b. Aug. 5, 1828.

3. *Marianne*; b. May 9, 1810.

GOVERNMENT.

The kingdom of the Netherlands, which was constituted in 1814, is a limited hereditary monarchy. The Constitution is formed on the basis of the representative system, and bears a close resemblance to that of Great Britain. The executive power is vested in the King; the legislative power in the King and the States-General, consisting of two Houses. The members of the Upper House are named by the King for life. They must be 40 years of age; in number not less than 40, nor more than 60; and their titles are not hereditary. The members of the Lower House, 110 in num-

ber, are elected by the people for the term of three years, and consist of three orders, gentry, citizens, and peasants. The several provinces have also their Assemblies of States, which meet for the purpose of legislating on matters of local interest.

The religion of the Dutch provinces is the Calvinist; that of the Belgic provinces, Roman Catholic; but all sects are tolerated; and the clergy are supported by the state.

MINISTRY.

His Royal Highness the Prince of Orange, *President of the Council of Ministers; also President of the Council of State, in the absence of the King.*

His Royal Highness Prince Frederick of the Netherlands, *Commissary General of War.*

Their Excellencies;

Count C. J. P. de Thiennes de Lombize, *Minister of State.*

[M. C. F. van Maanen, *Minister of Justice.*—Recently discharged.]

Baron A. W. C. de Nagell van Ampsen, *Minister of State.*

Baron W. F. Roël, *Minister of State, Chancellor of the Order of the Belgic Lion.*

Baron J. H. Mollerus, *Secretary of State, Vice-President of the Council of State.*

Baron G. A. G. P. van der Capellen van Berkenwoude, *Secretary of State.*

M. O. Repelaer van Driel, *Minister of State.*

M. O. T. Elout, *Minister of the Navy and the Colonies.*

Baron J. G. de Mey van Streefkerk, *Secretary of State.*

M. P. L. J. S. Gobbelschroy, *Minister of the Home Department.*

Baron J. G. Verstolk de Soelen, *Minister of Foreign Affairs.*

Baron C. C. Six van Oterleek, *Minister of State.*

M. A. W. N. van Tetz van Goudriaan, *Minister of Finance.*

Vicount L. P. J. du Bus de Gisignies, *Minister of State.*

Baron F. W. F. T. de Pallandt van Keppel, *Minister of State.*

The following statement exhibits the heads of Expenditure of the kingdom of the Netherlands, and their average annual amount, as derived from official returns for the last eleven years. [Liverpool Paper, Sept. 1830.]

5. *Adolphus Frederick*, Duke of Cambridge; (27,000); b. Feb. 24, 1774; m. May 7, 1818, *Augusta Wilhelmina Louisa*, niece of the Landgrave of Hesse, b. July 25, 1797:—Issue; 1. *George William*, b. March 26, 1819; 2. *Augusta Caroline*, b. July 19, 1822.
6. *Mary*, Duchess of Gloucester; (£13,000); b. April 25, 1776; m. July 22, 1816, to her cousin the Duke of Gloucester.
7. *Sophia*; (£13,000); b. Nov. 3, 1777.

Niece of the King.

ALEXANDRINA VICTORIA, *Heiress Presumptive*, (daughter of the late *Prince Edward, Duke of Kent*,—b. Nov. 2, 1767, died Jan. 23, 1820,—by *Victoria Maria Louisa*, (£12,000), sister of the Duke of Saxe-Coburg, b. Aug. 17, 1786); b. May 24, 1819.

Cousins of the King.—Issue of the late Duke of Gloucester.

Sophia Matilda, (£7,000); b. May 23, 1773.
William Frederick, Duke of Gloucester; (£14,000); b. Jan. 15, 1776; m. July 22, 1816, his cousin the *Princess Mary*.

Related by Marriage.

Prince Leopold of Saxe-Coburg; (£50,000); b. Dec. 16, 1790; m. May 2, 1816, *Charlotte*, daughter of *George IV.* who died Nov. 6, 1817.

GOVERNMENT.

The government of England is a constitutional hereditary monarchy, in which the power of sovereign is controlled by the influence of the aristocracy in the House of Peers, and by that of the democracy in the House of Commons. The executive authority is vested in the King; the legislative, in the King and Parliament. The king has the power of appointing all the great officers of state, and all the executive acts of the government are performed in his name; but the ministers only are responsible for them.

THE KING'S MINISTERS.

Duke of Wellington,	<i>First Lord of the Treasury.</i>
Rt. Hon. Henry Goulburn,	<i>Chancellor of the Exchequer.</i>
Lord Lyndhurst,	<i>Lord-Chancellor.</i>
Earl Bathurst,	<i>President of the Council.</i>
Earl of Rosslyn,	<i>Lord Privy-Seal.</i>
Rt. Hon. Sir Robert Peel,	<i>Secretary of State for the Home Department.</i>
Earl of Aberdeen,	<i>Secretary of State for the Foreign do.</i>
Rt. Hon. Sir Geo. Murray,	<i>Secretary of State for the Colonial do.</i>
Viscount Melville,	<i>First Lord of the Admiralty.</i>
Rt. Hon. John C. Herries,	<i>Master of the Mint & Pres. of Board of Trade.</i>
Lord Ellenborough,	<i>Pres. of Board of Control. (Affairs of India.)</i>
Rt. Hon. Th. F. Lewis,	<i>Treasurer of the Navy.</i>

The above form the Cabinet.

Rt. Hon. Sir H. Hardinge,	<i>Secretary of War.</i>
Viscount Beresford,	<i>Master-General of the Ordnance</i>
Duke of Montrose,	<i>Lord Chamberlain.</i>
Marquis Conyngham,	<i>Lord Steward.</i>
Duke of Leeds,	<i>Master of the Horse.</i>
Marquis of Winchester,	<i>Groom of the Stole.</i>
Rt. Hon. C. Arbuthnot,	<i>Chancellor of the Duchy of Lancaster.</i>
Lord Hill,	<i>Commander of the Forces.</i>
Rt. Hon. John Calcraft,	<i>Paymaster of the Forces.</i>
Viscount Lowther,	<i>First Commissioner of the Land Revenue.</i>
Rt. Hon. T. P. Courtenay,	<i>Vice-President of the Board of Trade.</i>
Duke of Manchester,	<i>Postmaster-General.</i>
Lord R. E. H. Somerset,	<i>Lieutenant-General of the Ordnance.</i>

Sir James Scarlett, Knt.	<i>Attorney-General.</i>
Sir E. B. Sugden, Knt.	<i>Solicitor-General.</i>

The Ministry of Ireland.

Duke of Northumberland,	<i>Lord-Lieutenant of Ireland.</i>
Rt. Hon. Sir A. Hart, Knt.	<i>Lord-Chancellor.</i>
Lieut. Gen. Sir J. Byng,	<i>Commander of the Forces.</i>
Rt. Hon. Lord Lev. Gower,	<i>Chief Secretary.</i>
Rt. Hon. Maurice Fitzgerald,	<i>Vice-Treasurer.</i>

Rt. Hon. Henry Joy,	<i>Attorney-General.</i>
John Doherty, Esq.	<i>Solicitor-General.</i>

THE PRIVY COUNCIL AND CABINET.

The principal council of the sovereign is his *Privy Council*, the members of which are chosen by him, and, on changes of administration, are seldom erased, though those in opposition seldom attend. They are styled *Right Honorable*, and are sworn to observe secrecy. The lowest of the board pronounces his opinion first, and the king, if present, concludes by declaring his judgment.

The *Cabinet*, or *Cabinet Council*, consists of those ministers of state, who hold the highest rank and dignity. The number of members varies generally from 10 to 14; consisting of the Lord Chancellor, the Lord Privy Seal, the President of the Council, the First Lord of the Treasury,

the Chancellor of the Exchequer, the three principal Secretaries of State, the First Lord of the Admiralty, and commonly some others of the principal officers of government. The First Lord of the Treasurer is considered as the Premier or Prime Minister of the country. It has sometimes happened that the offices of the First Lord of the Treasury and the Chancellor of the Exchequer, have been held by the same person. The King removes his confidential servants, or "the administration," as it is called, at his pleasure.

The Lord Chancellor

Keeps the *Great Seal*, not to judge according to the common law, as other courts do, but to dispense with such parts as seem, in some cases, to oppress the subject; and to judge according to equity, conscience, and reason. He presides in the High Court of Chancery, which is the most important of all the King's civil courts of justice. He takes precedence of every temporal lord, and is by office Speaker of the House of Lords. To him belongs the appointment of justices of the peace throughout the kingdom; and he is patron of all the ecclesiastical benefices under the yearly value of £20 in the King's Books. He is also the general guardian of all infants, idiots, and lunatics. The Court of Chancery in which the Lord Chancellor alone sits and determines without a jury, judges causes in equity, in order to moderate the rigor of the law, to defend the helpless from oppression, and especially to extend relief in cases of accident, fraud, and breach of trust. From this court an appeal lies immediately to the House of Peers, which is the Supreme Court of Judicature in the kingdom.

The Lord Privy Seal

Is so called from his having the *King's Privy Seal* in his custody, which he must not put to any grant without warrant under the King's signet. This seal is used to all charters, grants, and pardons, signed by the King, before they come to the *Great Seal*.

The Lord President of the Council

Holds his post by letters patent *durante beneplacito*. By stat. 21, Henry VIII., he is to attend the King's person; to manage the debates in Council; to propose matters for the King at the Council; and to report to the King the resolutions thereupon.

The Treasury.

Formerly there was a Lord High Treasurer; but for upwards of a century the management of the Treasury has been put in commission, the commissioners being the *First Lord of the Treasury, the Chancellor of the Exchequer*, (to whom is entrusted, in an especial manner, the revenue and expenditure of the nation, and who often takes the lead on the ministerial side in the House of Commons), and three other Commissioners. The First Lord of the Treasury has the appointment of all officers employed in collecting the revenues of the Crown; the nomination of all escheators; the disposal of all places and ways relating to the revenue; and power to let leases of the crown lands.

The Three Secretaries of State.

The *Secretary of State for the Home Department* has the management of, and control over, the internal affairs of the kingdom; issues all directions and commands to Lord Lieutenants, Sheriffs, and other magistrates; and makes out and executes all grants, pardons, and regulations in civil matters of every kind. The *Secretary of State for Foreign Affairs* has the management of all correspondence and transactions with foreign nations. The *Secretary of State for the Colonial Department* has the management of all the affairs relating to the colonies of Great Britain.

The Admiralty.

The superintendence of the navy is seldom now entrusted to a Lord High Admiral; but a board of admiralty is appointed, consisting of a first Lord and several subordinate members. The duty of the admiralty is to consider and determine on all matters relating to the navy; to give directions for all services that are to be performed therein, both in its civil and naval branches, and generally to superintend the naval and marine establishment.

The Lord Chamberlain.

The office of the Lord Chamberlain is to take care of all officers and servants (excepting those belonging to the King's bedchamber, who are under the *groom of the Stole*), belonging to the King's chambers, who are sworn in their places by him. He has the oversight of the officers of the wardrobe at all the King's houses; of tents, revels, music, comedians, huntsmen, messengers, and artisans; also of the King's chaplains, heralds, physicians, apothecaries, &c. It is his duty to inspect into the charges of coronations, marriages, public entries, cavalcades, and funerals; and into all furniture for and in the parliament house, and rooms of addresses to the King.

The Lord Steward.

The estate of the King's household is entirely committed to the Lord Steward, to be ruled and governed by his discretion; and all his commands in court are to be obeyed. His authority reaches over all the officers and servants of the King's house, except those of the King's chamber, stable, and chapel. Under the Lord Steward, in the counting-house, are the treasurer of the household, comptroller, cofferer, master of household, clerks of the green cloth, &c. It is called the counting-house, because all the accounts and expenses of the King's household are daily taken and kept in it.

The Master of the Horse

Has the charge of all the King's stables and horses; also power over equeries, pages, footmen, grooms, farriers, smiths, saddlers, and all trades relating in any way to the stables. He has the privilege of applying to his own use one coachman, four footmen, and six grooms, in the King's pay, and wearing the King's livery. In any solemn cavalcade he rides next behind the King.

PARLIAMENT.

The Parliament of Great Britain is the great council of the nation, constituting the legislature, which is summoned by the King's authority, to consult on public affairs, and enact and repeal laws. It consists of Lords Spiritual and Temporal, called the Peers or Upper House; and Knights, Citizens, or Burgesses, who are comprehended under the name of the Commons or Lower House.

THE HOUSE OF LORDS OR PEERS.

The Lord High Chancellor Lyndhurst, *Speaker*.

The House of Lords is composed of all the five orders of nobility of England, dukes, marquesses, earls, viscounts, and barons, who have attained the age of 21 years, and labor under no disqualification; of 16 representative peers from Scotland; 28 representative peers from Ireland; 2 English archbishops and 24 bishops; and 4 representative Irish bishops:—the number of each, in 1830, being as follows:

Dukes (4 royal Dukes),	23	Representative Peers of Scotland,	- 16
Marquesses, - - -	18	Representative Peers of Ireland,	- 28
Earls, - - - - -	104	English Archbishops and Bishops,	- 26
Viscounts, - - - -	22	Irish Representative Bishops,	- 4
Barons, - - - - -	160		

Total of the House of Peers, 401

A List of the House of Lords, with the Date of the Creation of the Family, and the Birth of the present Peer.—The Titles here given are those by which the Noblemen sit in the House of Peers.

Royal Dukes.			Born.	Cre- ated.	Title.	Name.	B'n.

6th do.	August 4, 1818	February 29, 1820	1 6 25
7th do.	April 23, 1820	June 2, 1826	6 1 9
8th do.	Nov. 14, 1826	July 24, 1830	4 1 22
9th do.	elected between the 24th of July & the 14th Sept. 1830.		

THE ECCLESIASTICAL ESTABLISHMENT.

The King is considered the supreme head on earth of the Church of England. The Archbishop of Canterbury is styled the Primate of all England, and takes precedence of all persons, except the royal family. The Archbishop of York is styled the Primate of England, and his province includes the four bishoprics of Durham, Carlisle, Chester, and Sodor and Mann; all the rest being included in the province of the Archbishop of Canterbury. The Bishop of London has the 1st rank among the Bishops; the Bishop of Durham, the 2d; the Bishop of Winchester, the 3d; the rest rank according to the priority of their consecration.

The Archbishops and Bishops of England, with the Date of their Consecration and Translation to the See; the Sum each See is charged in the King's Books; and the actual Income, as stated for the year 1814.

Cons.	Archbishops.	Sees.	Trans.	King's Books.	Income.

1830	Henry Philpotts, D. D.	Bristol		294:11:0	1,000
1827	Wm. Ward, D. D.	Sodor & Mann		not a L'd. of Parl.	

To every cathedral belong a *dean* and several *prebendaries*, who form the *dean and chapter*, or council of the bishop. The next order is that of *archdeacons*, who are about 60 in number, and whose office is to reform abuses, and induct into benefices. The number of dignitaries of the several orders is stated as follows; 2 Archbishops, 25 Bishops, 27 Deans, 60 Archdeacons, and 544 Canons and Prebendaries:—total 658. The number of churches belonging to the establishment, in 1818, was 10,192; Chapels, 1,551: total 11,741. "According to the last diocesan returns," says the *Edinburgh Encyclopædia*, (1815), "the number of non-resident parochial clergy was 5,037; the number of residents 5,397; the number of curates on livings where the incumbents were not resident, 3,926. The annual income of the clergy of the Church of England of all ranks, is supposed to be about £3,000,000; but the annual average income of the parochial clergy, or rectors, vicars, and curates, does not exceed £100." Of 10,656 livings, according to a statement in a late English newspaper, 5,030 are in the gift of the Nobility; 3,567, in the gift of the Church; 1,015, of the government; 784, of the Universities; 197, of public bodies; 68, of the inhabitants.—Some make the income of the clergy lower than the above statement; while others make it as high as £7,600,000.

The following Table, which was compiled by an American Editor, from English Documents, and was copied into the Christian Observer for May, 1830, gives a view of the Population and of the Ecclesiastical Statistics of the Country.

1828	Richard Ponsonby, D. D. -	Killaloe & Kilf.		7,000

The Bishops of Meath and Kildare take precedence of all the other Bishops; the rest rank according to priority of consecration.

Rotation of Irish Bishops sitting in Parliament.

The rotation in which the Irish Bishops sit in Parliament, is regulated by the following cycle; by which each Archbishop sits *once in four*, and each Bishop *once in six sessions*.

Session.	Session.
1. Primate, Meath, Kildare, Derry.	7. Cashel, Meath, Kildare, Derry.
2. Dublin, Raphoe, Limerick, Dromore.	8. Tuam, Raphoe, Limerick, Dromore.
3. Cashel, Elphin, Down, Waterford, (1831.)	9. Primate, Elphin, Down, Waterford.
4. Tuam, Ferns, Cloyne, Cork.	10. Dublin, Ferns, Cloyne, Cork.
5. Primate, Killaloe, Kilmore, Clogher.	11. Cashel, Killaloe, Kilmore, Clogher.
6. Dublin, Ossory, Killala, Clonfert.	12. Tuam, Ossory, Killala, Clonfert.

The cycle is completed at the end of every twelve sessions.

"In Ireland," says the *Eclectic Review* (1828), "the Church of England has the tithes; the Church of Rome has the people. Out of nearly 7 millions of people, 5½ millions are Roman Catholics; above one million are Presbyterians and Dissenters of other sects; and not half a million (400,000) is computed to be the *outside* of the numbers who adhere to the Protestant establishment. To minister to these 400,000 hearers, there are no fewer than 1,700 clergy (of whom 587 are dignitaries), with an income of £1,800,000."

THE CHURCH OF SCOTLAND.

The established religion of Scotland is Presbyterianism. The Church of Scotland is governed by one General Assembly, 15 Synods, and 78 Presbyteries. It contains 899 parishes, and has 938 clergymen.

Members of the Established Church,	-	-	-	1,638,484
Seceding Presbyterians,	-	-	-	285,000
Roman Catholics,	-	-	-	70,000
Other Denominations,	-	-	-	98,530

Total, 2,092,014

JUDICIARY.

Rt. Hon. Sir John Leach,	<i>Master of the Rolls.</i> £7,000 a year.
Rt. Hon. Sir Launcelot Shadwell,	<i>Vice Chancellor.</i> £6,000 a year.
John Springett Harvey, Esq.	<i>Accountant General.</i>

Amount of effects of suitors in chancery, in 1828, £39,210,326.

Court of the King's Bench.

Rt. Hon. Lord Tenterden,	<i>Chief Justice.</i> £10,000 a year.
Sir John Bayley, - - -	} <i>Judges.</i> £6,000 a year each.
Sir Joseph Littledale, - - -	
Sir James Parke, - - -	

Court of Common Pleas.

Rt. Hon. Sir Nicholas C. Tindal,	<i>Chief Justice.</i> £8,000 a year.
Sir James Allan Park, - - -	} <i>Judges.</i> £6,000 a year each.
Sir Stephen Gaselee, - - -	
Sir John B. Bosanquet, - - -	

Court of Exchequer.

Sir William Alexander, - - -	<i>Lord Chief Baron.</i> £7,000 a year.
Sir William Garrow, - - -	} <i>Barons.</i> £6,000 a year.
Sir John Vaughan, - - -	
Sir William Bolland, - - -	

The average number of actions brought every year in England and Wales is 86,279.

The amount of damages recovered in the King's Bench, as shown by the *Posteas*, was, in 1828, £221,151.

Court of Admiralty.

Sir Christopher Robinson, Knt.	<i>Judge of the Court of Admiralty.</i>
Sir. H. Jenner,	<i>King's-Advocate-General.</i>

Four Ecclesiastical Courts :—

<i>Prerogative</i> , for Wills & Admin's, Doctors' Commons	} Sir J. Nicholl, £3,000 a year, by fees.
<i>Arches & Peculiars</i> , Appeals from Eccles'l Courts, do.	
<i>Faculty</i> , for Dispensations to marry, - - - do.	
<i>Delegates</i> , - - - - - do.	

The number of Proctors is limited to 34.

Insolvent Debtors' Court, Portugal Street.—H. R. Reynolds, Esq. Chief Com.—T. B. Bowen, Esq., J. G. Harris, Esq., W. J. Law, Esq.—Salaries, £11,254.—The number discharged under the present Act, up to 1829, was 51,000; their debts 4 millions sterling; assets a farthing in the pound; expense of discharge over £25 each. About 65 in every 1,200 produce any assets.

Marshalsea Court, Scotland Yard.

Courts of Requests in and about the Metropolis :—

<i>City</i> , Guildhall Buildings, King Street, Cheapside,	} For Debts under £5.
<i>Southwark</i> , Swan Street, Horsemonger Lane,	
<i>Wandsworth</i> , Ram Inn, Wandsworth, - - -	
<i>Greenwich</i> , - - - - -	
<i>County Court</i> , Kingsgate Street, Red Lion Square,	} For Debts under 40s.
<i>Tower Hamlets</i> , Osborne Street, Whitechapel,	
<i>Westminster</i> , Castle Street, Leicester Square,	
<i>Vine Street</i> , Piccadilly, - - -	

There are 164 places in England where the power of committing for debt exists.

The number of Barristers is calculated at 1,034; Conveyancers and Pleaders, 138; London Attorneys, 9,056; Country Attorneys, 2,667. Total Lawyers in England and Wales, 12,895.—For the 9 years ending in 1829, the attorneys paid in duties on articles of clerkship, admissions, and yearly certificates, upwards of one million sterling.

Barristers' fees constitute 25 per cent. of the whole expenses of law suits.

ARMY.

The amount of the land forces voted for the service of the year 1829 was 89,723 men, exclusive of the men employed by the East India Company. The sum voted for the whole expenses of the army, including every charge connected with it, was £6,336,231. The British army is composed of 108 battalions. About twenty of these are in the service and pay of the East India Company, and fifty-four more are disposed of in the Colonies. Four battalions, on an average, are constantly on their passage to relieve the regiments on foreign stations, leaving twenty-five battalions (exclusive of guards) for the service of the United Kingdom. The casualties in the army, according to Sir Henry Hardinge's estimate, amount to about one-eleventh or one-twelfth of the whole forces annually. The Mutiny Bill underwent an alteration in the session of 1829. The clauses, which used to amount to 163, are now condensed to 77, and the Bill is rendered more concise and plain. It enables general commanding officers in a district to order district courts-martial instead of general regimental courts-martial. The oath is the same for all members of courts-martial.

Officers and Institutions connected with the Army.

Staff at Head Quarters.—Commandant in Chief, Staff, Secretaries, &c. (Horse Guards), £12,167 9s. 6d.

Secretary at War, Deputy, Clerks, &c. (do.), £32,808 10s.

Paymaster, do. do. (Whitehall) £21,008 10s.

Adjutant-General do. (Horse Guards), £6,835 19s.

Quarter-Master-General do. (do.) £5,905 5s.

Judge-Advocate-General, do. (Upper Crown Street), £5,982 6s.

Comptroller of Accounts do. (Whitehall), £13,000 17s.

Recruiting Office, (Eng. and Ireland) £56,776 9s.

Board of General Officers, 21, Spring Gardens.

Army Medical Board, Berkeley Street, Piccadilly.—*Director-General*, Sir J. McGrigor.—*Secretary*, S. Reed, Esq.

Royal Military College, Sandhurst, Berks. Instituted 1799. Parl. allow. £10,029 17s. 1d.—*Gov.* Sir E. Paget.

Royal Hospital, Chelsea.—*Gov.* Sir S. Hulse. Parl. allow. (with Kilmainham Royal Hospital, Dublin, and including In and Out Pensioners), £1,325,014 6s. 1d.

Royal Military Asylum, Chelsea.—*Command.* Lieut. Col. Williamson. Parl. allow. £24,155.

Garrisons at home and abroad, Parl. allow. £36,862 18s. 11d.

The sum of £700,000 was also granted for the extraordinary expenses of the army.

NAVY.

The number of men voted for the service of the Fleet for 1829, was 30,000, including 9000 marines. The sum voted for the general expenses of the Navy was £5,878,794.

Officers and Institutions connected with the Navy.

Admiralty, Charing Cross.—*Lords Commiss.* Viscount Melville, £5,000; Sir G. Cockburn, Sir H. Hotham, Sir G. Clerk, Visct. Castlereagh, £1,000 each.—*Sec.* Rt. Hon. J. W. Croker, £3,000.—2d *Sec.* J. Barrow, Esq. £1,500.—Total for office, £52,976 5s. 1d.

Navy Pay, Somerset Place.—*Treas.* Rt. Hon. W. V. Fitzgerald, £3,000.—*Paymast.* Capt. Huskisson, £1,200.—Total for office, £88,449 6s. 7d.

Navy Office, Somerset Place.—*Compt.* Sir T. B. Martin, £2,000.—*Dep.* Hon. H. Legge.—Total for office, £60,830 15s.

Victualling Office, Somerset Place.—*Chairm. of Board*, Hon. G. A. C. Stapylton, £1,200.—*Dep.* I. Wolley, Esq. £1,000.—Total for office £180,827 11s. 7d.

His Majesty's Yards at home, £1,385,529 18s. 3d.

His Majesty's Yards abroad, £52,141 3s. 3d.

In lieu of the Board of Longitude, which was abolished in 1828, a council composed of Messrs. Young and Faraday and Captain Sabine, at £100 a year each, assists the Admiralty in matters of science.

Victualling Yards, £64,356.

Naval College, £3,121 8s. 3d.

Royal Hospital, Greenwich.—*Military Department*, Governor, Sir R. Keats.—*Civil Department*, Commissioners, V. Fitzgerald, Lord Lowther, Sir W. J. Hope, Lord Auckland, E. H. Locker, Esq.—*Sec.* W. H. Hooper, Esq.—Parl. allow. £250,000.

Pilotage.—60,000, £64,455 13s. 5d.

Marine Pay Office, 22, New Street, Spring Gardens.

ORDNANCE.

The sum voted for the general expenses of the Ordnance for 1829-30 was £1,728,908.

Offices and Establishments connected with the Ordnance.

Ordnance Office, Pall Mall and Tower.—*Master-General*, Viscount Beresford, £3,176.—*Lieut.-Gen.* Lord R. Somerset, £1,200.—*Surveyor-General*, Sir H. Fane, £1,500.—*Clerk*, Spencer Perceval, Esq., £1,200.—*Total for office*, £70,544. *Constable of Tower*, Duke of Wellington.

Establishments at Woolwich, £8,600.

Stations at home and abroad, £42,817.

Royal Military Academy, Woolwich, £3,507.

Barracks, Great Britain and Colonies, £117,636.

Barracks, Ireland, £102,721.

BANK OF ENGLAND.

Samuel Drewe, Esq. *Governor*. J. Horsley Palmer, Esq. *Dep. Gov.*

The charter by which this Company subsists is the *eighth* that has been granted to them since their incorporation. It was granted in 1800, and will expire on the first of August, 1833. On the 28th Feb. 1829 their advances to Government amounted to upwards of twenty millions and a half sterling. The balance of public money in their hands is from three to five millions on the average; and they are paid better than a quarter of a million yearly for the management of the Public Debt. The amount of their circulation in September, 1829, was £18,873,740. From the 1st Jan. 1826 to the 1st May 1828, the Bank issued £21,766,905 in sovereigns and half-sovereigns, of which £1,090,858 7s. were issued in exchange for guineas.

The dividend is eight per cent. per annum on Bank Stock.

£500 Bank Stock qualifies a holder for voting at a general court, if he be in possession of it for six months; £2,000 qualifies the holder for a Director; £3,000 for Deputy-Governor; and £4,000 for Governor. No proprietor can have more than one vote.

[The above notices of the *Judiciary*, *Army*, *Navy*, and *Bank of England*, are taken chiefly from the *Englishman's Almanac* for 1830.]

REVENUE AND EXPENDITURE.

[From the *Englishman's Almanac* for 1830.]

In opening the budget for 1829–30, the Chancellor of the Exchequer calculated the Revenue for the year at £51,347,000. The actual produce of the two quarters ended 10th Oct. 1829 is upwards of 25 millions, so that if the other two quarters equal the preceding ones, the computation of the government will have been correct. The expenditure for the year has been settled by the House of Commons at £48,333,593, which, deducted from the expected income, yields a balance of £3,013,407 for reducing the debt. The expenditure consists of payments on account of the debt amounting to £27,903,000; for annuities payable by the Bank, £585,000; and for the fixed charge on the Consolidated Fund, £2,200,000. Then for the Army, Navy, Ordnance, Miscellaneous Services, &c. there have been voted about 18 millions, making the total expenditure as above. It was calculated in parliament last year, that the amount of government taxes each year is £50,700,000, which, with manifold local rates, voluntarily and otherwise borne by the community, is swelled to nearly 80 millions a year. Calculating the population at 20 millions, there is paid every year in this country, in the shape of taxation, at the rate of £4 each person. In France, the total taxation does not exceed the rate of £1 6s. per soul; in America it amounts to only 10s. a head. The annual average official value of our exports, from 1810 to 1820, was upwards of 36 millions sterling; from 1821

to 1826, it was upwards of 45 millions sterling; in 1827, it was £45,110,000; and in 1828, £52,049,000.—The number of factories in Manchester, in 1820, was 54, and their value as assessed to the poor's rates, £16,806. In 1828, the number was 56; value, £18,293. In 1826 the number was 72; value, £24,034. In 1828 the number was 73, value, £25,245.—The import of cotton in the year 1824, was 147,000,000 lbs. In 1827 it was 268,000,000 lbs. The average quantity of cotton wool imported annually is about 197,000,000 lbs. weight. Of this quantity, 151,000,000 lbs. are imported from the United States of America; 17,000,000 from Brazil; Egypt, 7,000,000; West Indies, 12,000,000; and the rest from the East Indies. The duty on British woollen cloth imported into the United States of America, after June 1829, is, on coarse texture, 45 per cent.; on finer cloths, 50 per cent.

NET PRODUCE of the Revenue of Unredeemed FUNDED DEBT, and Great Britain in the Years ending Oct. 10, 1828 & Oct. 10, 1829. [Companion to the British Almanac, 1830.]

	1828.	1829.	Debt.	Charge
Customs, £16,858,170	£15,961,206	G. Britain, £741,089,836	£26,436,859.	
Excise, 17,905,978	17,904,027	Ireland, 31,232,704	1,165,897	
Stamps, 6,575,318	6,704,792		£772,322,540	27,602,256

EAST INDIA COMPANY.

William Astell, *Chairman of the Directors.*

This Company was incorporated in 1700; but their present charter was granted in 1813; and it will expire in 1834. The proprietors of East India Stock consist of about 3,000 persons. A proprietor of £1,000 stock is entitled to one vote; of £2,000, to 2 votes; of £3,000, to 3 votes; of £10,000 and upwards, to 4 votes. The dividend is 10½ per cent. *per annum*. The produce of the Company's trade with India, in 1828, was £5,891,000; the value of their exports to China (of which they have the monopoly), was £863,494.

The Receipts, Territorial and Commercial, (exclusive of

the duty on Tea), for the year ending May, 1829, were £9,371,230 12 6

Expenditure, - - - - - 8,298,667 9 5

Balance, - - - - - £1,081,563 3 1

The gross produce of the Tea sold in 1828, was £4,254,000.

From 1814 to 1826, there were sent out to India, 3,174 cadets; in the year 1828, 77 writers, 357 cadets, and 59 assistant surgeons. [*Englishman's Almanac.*]

BENGAL.

Lord William Cavendish Bentinck,	<i>Governor-General of India.</i>
Earl of Dalhousie,	<i>Commander-in-Chief.</i>
Sir Charles Grey,	<i>Chief Justice.</i>
John M. Turner, D. D.	<i>Bishop of Calcutta.</i>

MADRAS.

Rt. Hon. Stephen R. Lushington, *Governor.*
 Sir George T. Walker, . . . *Commander of the Forces.*
 Sir Ralph Palmer, . . . *Chief Justice.*

BOMBAY.

Sir John Malcolm, . . . *Governor.*
 Sir Thomas Bradford, . . . *Commander of the Forces.*
 Sir James Dewar, . . . *Chief Justice.*

NEWSPAPERS.

The number of Newspapers published in London, in 1829, has been stated at 55; in other parts of England, 158; in Scotland, 38; in Ireland, 74:—total, 325. The number of Newspapers and Periodical Journals, in the *United States*, in 1828, according to the statement in the first volume of this *Almanac* (see p. 229), was 802. The present number is not far from 1,000.

The following statement exhibits the number of *stamps* issued for some of the principal London Newspapers, in 1829, and the *amount of duty* received for them.

	<i>Stamps.</i>	<i>Duty.</i>
Times and Evening Mail	3,275,311	£54,538 10 4
Morn'g Chron., Observer, Bell's Life in L., and Englishman	2,331,450	33,857 10 0
Morning Herald and English Chronicle	2,000,475	33,341 5 0
Standard, St. James's Chronicle, London Packet, and London Journal	1,367,000	22,783 6 8
Morning Advertiser and Weekly Register	1,145,000	19,083 6 4
Courier	995,200	16,586 13 8
Globe and Traveller	864,000	14,400 0 0
Bell's Weekly Despatch	780,552	13,009 4 0
Sun	625,000	10,416 13 4
Morning Post	598,500	9,975 0 0

The following remarks are from "The Englishman's Almanac" for 1830.

"There are printed in London 50 newspapers; in the country parts of England, 155. These consume 25 millions of stamps in the year. The principal London papers are the *Times*, *Morning Herald*, *Morning Chronicle*, *Morning Post*, *Morning Journal*, *Morning Advertiser*, and *Ledger*, morning papers: the *Courier*, *Globe*, *Standard*, *British Traveller*, *Sun*, and *Star*, evening papers. Most of these journals are conducted with amazing ability. Articles almost daily appear in the *Times*, which, for rhetorical merit, would adorn some of the most illustrious names in our literature.—The subscription to the Morning Papers is £2. 6s. per quarter.—The charge for advertising is 7s. for each advertisement at and under seven lines, and at the rate of 6d. a line afterwards."

FRANCE.

KING AND ROYAL FAMILY.

LOUIS PHILIP, King of the French; of the Branch of Orleans, and descended from a brother of Louis XIV; b. Oct. 6, 1773; proclaimed King of the French, Aug. 9, 1830; m. Nov. 25, 1809, MARIA AMELIA, daughter of Ferdinand, king of the Two Sicilies, b. April 26, 1782: Issue:—

1. FERDINAND, Duke of Chartres; b. Sept. 3, 1810.
2. *Louisa*; b. April 3, 1812.—3. *Maria*; b. April 12, 1813.
4. *Louis Charles*, Duke of Nemours; b. Oct. 25, 1814.
5. *Clementina*; b. June 3, 1817.
6. *Francis*, Duke of Joinville; b. Aug. 14, 1818.
7. *Henry*, Duke of Aumale; b. Jan. 16, 1822.
8. *Anthony*, Duke of Montpensier; b. July 31, 1824.

Sister of the King.

Eugenie Adelaide Louisa, Mad. d'Orleans; b. Aug. 23, 1777.

[THE KING AND FAMILY excluded by the Declaration of the Chamber of Deputies of the 7th of August, 1830.]

CHARLES X, King of France and Navarre; Most Christian Majesty; b. Oct. 9, 1757; succeeded his brother *Louis XVIII*, Sept. 16, 1824; crowned at Rheims, May 29, 1825; m. Nov. 6, 1773, *Maria Theresa*, sister of the king of Sardinia, who died at Gratz, June 2, 1805: Issue:—

LOUIS ANTHONY, Duke of Angoulême, *Dauphin*; b. Aug. 6, 1775; m. June 10, 1799, *Maria Theresa (Dauphiness)*, daughter of Louis XVI, b. Dec. 19, 1778.

Louisa Maria Theresa, (daughter of the late Duke of Berry, next brother to the Dauphin); b. Sept. 21, 1819.

Henry, Duke of Bourdeaux (*grandson of France*, a posthumous son of the late Duke of Berry); b. Sept. 29, 1820.

Council of Ministers of Charles X, 1830.

Prince de Polignac,	<i>President of the Council of Ministers.</i>
M. de Chantelauze,	<i>Keeper of the Seals.</i>
Count de Peyronnet,	<i>Minister of the Interior.</i>
Baron d'Haussez,	<i>Minister of Marine.</i>
Baron de Montbel,	<i>Minister of Finance.</i>
Count de Guernon Ranville,	<i>Minister of Eccles. Affairs & Public Instruction.</i>
Baron Capelle,	<i>Secretary of State for Public Works.]</i>

The following are some of the principal events of the *Revolution* which has recently taken place in France. On the 19th of March, 1830, the King prorogued the Chamber of Deputies till September 1, in consequence of the stand which they took against the ministry, in their answer to the King's speech; on the 17th of May, he dissolved the Chamber; and at the same time new elections were ordered, and the two Chambers convoked for August 3d. Of the 221 Deputies who voted for the answer, 220 were reelected; and in the new Chamber, the liberals had a large majority. In consequence of this result, the ministers made a report to the King, which was published July 26, accompanied by three ordinances; one dissolving the Chamber of Deputies; another suspending the liberty of the press; and a third altering the law of election. All the liberal papers in Paris were suppressed; the bank refused

to discount bills; the manufacturers discharged their workmen; and the streets of Paris were thronged with people. The editors signed a remonstrance declaring the ordinances illegal, and that they ought to be resisted. On the morning of the 27th, the newspapers and journals appeared as usual, and the seizure of the presses and the imprisonment of the editors were signals of the revolution. The citizens took up arms against the government, and by one o'clock, the following day, obtained a complete victory over the King's Guards. On the 29th of July, the liberal deputies, who had assembled in Paris, appointed Lafayette commander-in-chief of the National Guards; and on the 31st, they published a declaration inviting Louis Philip, Duke of Orleans, to become Lieutenant General of the kingdom. On the same day (31st) Charles X. and his household fled from St. Cloud to Rambouillet; and on the 2d of August, the abdication of the King and the Dauphin, in favor of the Duke of Bourdeaux, with the title of *Henry V*, was placed in the hands of the Lieutenant General. The two Chambers met on the 3d of August: the Chamber of Deputies declared the throne of France vacant *de facto et de jure* on the 6th; adopted the new-modelled charter by a vote of 219 to 33, and voted to invite the Duke of Orleans to become King of the French, on condition of his accepting the changes of the Charter, on the 7th; the Duke accepted the crown on the 8th, and took the prescribed oath on the 9th. The Chamber of Peers adopted, on the 7th of August, all the provisions contained in the Declaration of the Chamber of Deputies, except the following, namely, "All the creations of peers during the reign of Charles X. are declared null and void;" declaring, that they "would leave the decision of this question to the high prudence of the Prince Lieutenant General."

CONSTITUTIONAL CHARTER AS MODIFIED BY THE DECLARATION OF THE CHAMBER OF DEPUTIES, AUG. 7, AND SWORN TO BY LOUIS PHILIP OF ORLEANS, AUG. 9, 1830.

Declaration of the Chamber of Deputies.

The Chamber of Deputies, taking into consideration the imperious necessity which is the result of the 26th, 27th, 28th, and 29th of July, and the following days; and of the situation in which France is at this moment placed, in consequence of this violation of the Constitutional Charter;—considering, moreover, that by this violation, and the heroic resistance of the citizens of Paris, his Majesty King Charles X, his Royal Highness Louis Anthony, his son, and the senior members of the Royal House are leaving the Kingdom of France, declare that the Throne is vacant *de facto et de jure*, and that there is an absolute necessity of providing for it.

The Chamber of Deputies declare, secondly, that according to the wish, and for the interest of the people of France, the preamble of the Constitutional Charter is omitted, as wounding the national dignity, in appearing to grant to them rights which essentially belong to them: and that the succeeding Articles of the same Charter ought to be suppressed or modified in the following manner:—

[Translated from "Le Courier des États-Unis."]

Art. 1. Frenchmen are to be equal in the eye of the law, whatever may be their titles or their ranks.

2. They are to contribute in proportion to their fortunes to the expenses of the State.

3. They are all to be equally admissible to civil and military employments.

4. Their individual liberty is hereby equally guaranteed. No person can be either prosecuted or arrested, except in cases prescribed by the law.

5. Each one may profess his religion with equal liberty, and shall obtain for his religious worship the same protection.

6. The ministers of the Catholic, Apostolic, and Roman religion, professed by the majority of the French, and those of other Christian worship, receive stipends from the public treasury.

7. Frenchmen have the right of publishing and printing their opinions, provided they conform themselves to the laws. The censorship can never be reëstablished.

8. All property is inviolable, without any exception of that which is called national; the law making no difference.

9. The State may exact the sacrifice of property for the good of the public, legally proved; but an indemnity shall be first given to those who may suffer from the change.

10. All searching into the opinions and votes given before the Restoration, is interdicted; and the same oblivion is enjoined upon the tribunals and upon the citizens.

11. The conscription is abolished; the method of recruiting the army for the land and sea service, is to be determined by law.

Of the King's Authority.

Art. 12. The person of the King is inviolable and sacred; his ministers are responsible; to the King alone belongs the executive power.

13. The King is the supreme head of the State; he commands the forces by sea and by land; declares war; makes treaties of peace, alliance, and commerce; appoints all those who are employed in the public administration; and makes the regulations necessary for the execution of the laws, without having power either to suspend the laws themselves, or dispense with their execution. Nevertheless, no foreign troops can ever be admitted into the service of the State, without an express law.

14. The legislative power is exercised collectively by the King, the Chamber of Peers, and the Chamber of Deputies.

15. The proposing of the laws belongs to the King, to the Chamber of Peers, and to the Chamber of Deputies. Nevertheless, every law imposing a tax must be first voted by the Chamber of Deputies.

16. Every law must be discussed and voted freely by the majority of each of the two Chambers.

17. If a proposed law be rejected by one of the three powers, it cannot be brought forward again in the same session.

18. The King alone sanctions and promulgates the laws.

19. The Civil List is to be fixed for the duration of the reign by the first Legislative Assembly after the accession of the King.

Of the Chamber of Peers.

Art. 20. The Chamber of Peers is an essential portion of the legislative power.

21. It is to be convoked by the King at the same time as the Chamber of Deputies. The session of one is to begin and to end at the same time as that of the other.

22. Any assembly of the Chamber of Peers which may be held at a time which is not that of the session of the Chamber of Deputies, is unlawful and void of all force, except in the single case in which it is assembled as a Court of Justice, and then it can exercise only judicial functions.

23. The nomination of the Peers of France is the prerogative of the King. Their number is unlimited. He can vary their dignities, and name them Peers for life, or make them hereditary at his pleasure.

24. Peers may enter the Chamber at twenty-five years of age, and have a deliberative voice at the age of thirty years.

25. The Chamber of Peers is to be presided over by the Chancellor of France, and in his absence, by a Peer named by the King.

26. The Princes of the Blood are Peers by right of birth. They take their seats next to the President.

27. The sittings of the Chamber of Peers are to be public, and also those of the Chamber of Deputies.

28. The Chamber of Peers takes cognizance of high treason, and of attempts against the safety of the State, which shall be defined by the law.

29. No Peer can be arrested but by the authority of the Chamber, or judged but by it in a criminal matter.

Of the Chamber of Deputies.

Art. 30. The Chamber of Deputies shall be composed of deputies elected by the electoral colleges, of which the organization is to be determined by law.

31. The deputies are to be elected for the space of five years.

32. No deputy can be admitted into the Chamber till he has attained the age of thirty years, and if he does not possess the other conditions prescribed by the law.

33. If, however, there should not be in the department fifty persons of the age specified, paying the amount of taxes fixed by law, their number shall be completed from the persons who pay the greatest amount of taxes under the amount fixed by law, who may be elected concurrently with the first.

34. No person can be an elector if he is under 25 years of age; and if he does not possess all the other conditions determined by the law.

35. The presidents of the electoral colleges are to be named by the electors.

36. One half at least of the deputies shall be chosen from those who have their political residence in the department.

37. The President of the Chamber of Deputies is to be elected by the Chamber itself, at the opening of each session.

38. The sittings of the Chamber are to be public; but the request of five members shall be sufficient to enable the Chamber to resolve itself into a secret committee.

39. The Chamber is to be divided into committees, to discuss laws which may be proposed.

40. No tax can be established or collected, if it has not been consented to by the two Chambers, and sanctioned by the King.

41. The land and house tax can be voted for one year only. The indirect taxes may be voted for several years.

42. The King is to convoke every year the two Chambers, and he has the right to prorogue them, and to dissolve that of the Deputies; but in this case he must convoke a new one within the period of three months.

43. No bodily restraint can be exercised against a member of the Chamber during the session, nor for six weeks which precede or follow the session.

44. No member of the Chamber can be, during the session, prosecuted or arrested in a criminal matter, unless taken in the act, till after the Chamber has permitted his arrest.

45. Every petition to either of the Chambers must be made in writing. The law interdicts its being carried in person to the bar.

Of the Ministers.

Art. 46. The ministers may be members of the Chamber of Peers or the Chamber of Deputies. They have, moreover, their entrance into either Chamber, and are entitled to be heard, when they demand it.

47. The Chamber of Deputies has the right of impeaching the ministers, or of bringing them before the Chamber of Peers, which alone can judge them.

Judiciary.

Art. 48. All justice emanates from the King; it is administered in his name, by the judges, whom he names, and whom he institutes.

49. The judges named by the King are not removable.

50. The ordinary courts and tribunals existing are to be maintained, and there is to be no change but by virtue of a law.

51. The existing institution of the tribunal of commerce is preserved.

52. The office of justice of the peace is equally preserved. The justices of the peace, though named by the King, are not unremovable.

53. No one can be deprived of his natural judges.

54. Consequently, there can be no extraordinary commissions or tribunals, under any title or denomination whatever.

55. The debates shall be public in criminal matters, except when that publicity may be dangerous to public order and manners; and in that case the tribunal is to declare so by a distinct judgment.

56. The institution of juries is preserved; the changes which a longer experience may render necessary can be effected only by a distinct law.

57. The punishment of the confiscation of goods is abolished, and cannot be reestablished.

58. The King has the right to pardon and to commute punishments.

59. The civil code, and the laws actually existing, that are not contrary to the present Charter, shall remain in full force until they shall be legally abrogated.

Particular Rights guaranteed by the State.

Art. 60. The military in actual service, officers and soldiers retired, widows, officers and soldiers pensioned, are to preserve their rank, honors, and pensions.

61. The public debt is guaranteed; every sort of engagement made by the State with its creditors, is inviolable.

62. The ancient nobility resume their titles; the new preserve theirs; the King creates nobles at his pleasure; but he only grants to them rank and honors, without exemption from the burdens and duties imposed on them as members of society.

63. The Legion of Honor is maintained. The King is to determine the regulations and the decorations.

64. The Colonies are to be governed by particular laws and regulations.

65. The King and his successors shall swear, at their accession, in presence of the two Chambers, to observe faithfully the present Constitutional Charter.

66. The present Charter, and all the rights it consecrates, remain entrusted to the patriotism and courage of the National Guard and all the citizens.

67. France resumes her colors; in future no other cockade shall be worn than the tri-colored.

Supplementary Provisions.

The Chamber of Deputies declares that it is necessary to provide successively by separate laws, and that with the shortest possible delay;—

1. For the extension of the trial by jury to misdemeanors of the press;
2. For the responsibility of ministers and the other agents of government;
3. For the reelection of deputies appointed to public offices with salaries;
4. For the annual voting of the army estimates;
5. For the organization of the National Guards, their officers to be chosen by themselves;

6. For regulations securing, in a legal manner, the condition of officers both military and naval, of all ranks;

7. For departmental and municipal institutions founded on an elective system;

8. For public instruction and liberty in teaching;

9. For the abolition of the double vote, and for fixing the qualifications of electors and deputies.

Special Provisions.

All the creations of Peers, during the reign of Charles X., are declared null and void.

Article 23 of the Charter (the 27th of the old Charter) shall undergo a fresh examination during the Session of 1831.

Upon condition of accepting these provisions and propositions, the Chamber of Deputies declares, that the universal and pressing interest of the French People calls to the throne his Royal Highness Louis Philip, Duke of Orleans, Lieutenant-General of the kingdom, and his descendants for ever from male to male, in the order of primogeniture, and to the perpetual exclusion of the female branches and their descendants.

In consequence his Royal Highness Louis Philip, Lieutenant-General of the kingdom, shall be invited to accept and make oath to the above clauses and engagements—the observance of the Constitutional Charter, and the modifications indicated—and after having made oath before the assembled Chambers, to assume the title of the King of the French.

Debated at the Palace of the Chamber of Deputies, 7th August, 1830.

Presidents and Secretaries.—*Lafitte*, Vice-President. *Jaqueminot*, *Pavée de Vendœuvre*, *Cunin Gridaine*, *Jars*.

Examined with the original by us President and Secretaries—*Lafitte*, *Jars*, *Jaqueminot*, *Pavée de Vendœuvre*, Deputy de l'Aube. *Cunin Gridaine* Deputy des Ardennes.

Ministry of Louis Philip.

Count de Mole,	<i>Min. For. Affairs.</i>	M. de Guizot,	<i>Min. of the Interior.</i>
General Gerard,	<i>Minister of War.</i>	Gen. Sebastiani,	<i>Min. of Marine.</i>
Baron Louis,	<i>Min. of Finance.</i>	M. Dupont d'Eure,	<i>Keeper of the Seals</i>
Duke de Broglie,	{ <i>Min. Pub. Inst. and</i> <i>Pres. Coun. State.</i>		<i>and Minister of Justice.</i>

M. Casimir-Perrier, & M. J. Lafitte, *Ministers of State.*

Benj. Constant, { *President of the Committee of Legislation and the Administration of Justice in the Council of State.*

Baron Pasquier, *President of the House of Peers.*

M. Lafitte, *President of the House of Deputies.*

The number of *Deputies* is 430. The number of *Peers*, before the recent revolution, was 367, of which 93, who were created by Charles X., have been disqualified from taking their seats under the new government, by the decision of the Chamber of Deputies.

The old Charter permitted only those Frenchmen (30 years old) who paid annually 300 francs in direct taxes, to be electors, and those only to be eligible, who paid 1,000 francs. Of nearly 32,000,000 of people there were supposed to be only about 80,000 electors; and only 5,000 or 6,000 persons eligible. The new Charter leaves these qualifications to be settled by law.

PRUSSIA.

KING AND ROYAL FAMILY.

FREDERICK WILLIAM III., King of Prussia, Margrave of Brandenburg, and Sovereign Duke of Silesia; b. Aug. 3, 1770; succeeded his father *Frederick William II.* Nov. 16, 1797; m. Dec. 14, 1793, *Louisa Augusta*, Princess of Mecklenburg-Strelitz, who died July 13, 1810. [m. (II.) (by private marriage, *mariage morganatique*) Nov. 9, 1824, to *Augusta*, Princess of Liegnitz:—Issue by the first marriage:—

1. **FREDERICK WILLIAM**, *Prince Royal*; b. Oct. 15, 1795; m. Nov. 29, 1823, *Elizabeth Louisa*, sister of the king of Bavaria, b. Nov. 13, 1801.

2. *William Louis*; b. March 22, 1797; m. June 11, 1829. *Augusta*, daughter of the Duke of Saxe-Weimar.

3. *Charlotte*, Empress of Russia, b. July 13, 1798.

4. *Charles*; b. June 29, 1801; m. May 26, 1827, *Maria*, daughter of the Duke of Saxe-Weimar.

5. *Alexandrina*; b. Feb. 23, 1803; m. Sept. 24, 1820, to Prince *Frederick* of Mecklenburg-Schwerin.

6. *Louisa*; b. Feb. 1, 1808; m. May 21, 1825, to *Frederick* of Orange.

7. *Albert*; b. Oct. 4, 1809.

GOVERNMENT.

The government of Prussia is an absolute monarchy, and is perhaps as military in its character as any other in Europe. The king is assisted by a ministry or cabinet, on a similar footing to that of England; but there is no representative assembly, although the royal decree of May 22, 1815, promised the nation a representative constitution. The king, some years since, however, established Provincial Estates, which may be consulted in regard to taxation, and discuss what is laid before them by the authority of the sovereign; but they have not the power of even making propositions to the government. The religion of the royal family is the Calvinist or Evangelical; but there is no religion of state, and all denominations are equally tolerated. In 1817, the Lutherans and Calvinists of Prussia and some other German states formed a union under the name of Evangelical Christians.

SUPREME AUTHORITIES.

The Ministry of State.

The Ministry of State is composed of his Royal Highness the Prince Royal, the Actual Privy Counsellor of State, the General of the Infantry, Count de Lottum, and the chiefs of particular ministries or departments. The President of the Council of State, Duke Charles of Mecklenburg, has the right to assist at the conferences of the Ministry of State when he pleases.

Particular Ministries or Departments.

Baron d'Altenstein, *Minister for Ecclesiastical Affairs, Public Instruction, and Health, and Privy Minister of State.*

Baron de Schuckmann, *Min. of Interior, and Privy Minister of State.*

Prince de Sayn-Wittgenstein, *Chief Minister of the King's Household, Privy Counsellor of State, and Grand Chamberlain.*

Count de Bernstorff, *Minister for Foreign Affairs, and Minister of State and of the Cabinet.*

M. de Hake, *Minister of War and of State; General of the Infantry.*

Count Dankelmann, *Minister of Justice, and Privy Minister of State.*

M. de Motz, *Minister of Finance, and Minister of State.*

EDUCATION.

The Prussian government is distinguished for patronizing learning; and the kingdom is one of the best educated in Europe. The following particulars respecting primary education are taken from the official statement for the year 1825.

Number of Elementary Schools, - - - -	20,887
Number of Schools of a higher order, - - - -	736
Total	21,623.
Boys in the Elementary Schools, - - - -	822,077
Girls, do. - - - -	755,922
Boys in the Schools of a higher order, - - - -	49,169
Girls, do. - - - -	37,050
Total	1,644,218

Students in the Universities of the Prussian States.

	Students in Theology.		Students in Philology and Philosophy.	Students in Jurisprudence and Government.	Students in Medicine.	Total.
	Evang. Church.	Catholic Church.				
1820—Winter of 1820—21	892	264	450	1,109	667	3,382
1825—Winter of 1825—26	1,674	763	577	1,724	714	5,452
1826—Winter of 1826—27	1,796	878	637	1,651	693	5,656
1827—Winter of 1826—28	1,951	888	714	1,670	731	5,956

SAXONY.

KING AND ROYAL FAMILY.

ANTHONY, King of Saxony; b. Dec. 27, 1755; succeeded his brother *Frederick Augustus*, May 12, 1827; m. **MARIA THERESA**, sister of the Emperor of Austria.

Maria Amelia, sister of the King; b. Sept. 26, 1757.

MAXIMILIAN, brother of the King; b. April 13, 1759; m. (I.) *Caroline*, of Parma, March 1, 1804; m. (II.) *Maria Louisa*, sister of the Duke of Lucca, Nov. 7, 1825:—Issue by the 1st marriage;—*Amelia*, b. Aug. 10, 1794; *Maria*, April 27, 1796; **FREDERICK AUGUSTUS**, lately appointed *Joint Regent*, b. May 18, 1797, m. 1819, *Caroline* of Austria:—*Anne*, b. Nov. 15, 1799; *John*, b. Dec. 12, 1801, m. 1822, *Amelia* of Bavaria.

GOVERNMENT.

The government is a limited monarchy. There is an Assembly of Estates composed of three orders, clergy, nobility or gentry, and deputies from the towns. This Assembly regulates the taxes and imposts, and deliberates on important laws. The inhabitants are chiefly Protestants; the number of Catholics being computed at only 48,000, though the religion of the reigning family has been Catholic since the year 1697.

SUPREME AUTHORITIES OF STATE.

Privy Cabinet.

Count Detlev d'Ensiedel, *Minister of the Cabinet and Secretary of State*. [Recently dismissed.]

M. de Minckwitz, (*Actual Confidential Counsellor, and Major General*), *Director of the Department of Foreign Affairs*.

Members of the Privy Council.

His Royal Highness Prince Frederick Augustus.

M. de Nostitz and Jaenkendorf, *Minister of Conference.*

Baron de Gutschmidt, *Minister of Conference.*

Baron de Werthern, *Minister of Conference and Chancellor.*

Baron de Manteuffel, *Minister of Conference and President.*

General de Zezschwitz, *Actual Privy Counsellor and President.*

M. de Carlowiz, *Actual Privy Counsellor.*

LEIPSIK LITERARY FAIR.

Leipsic is the greatest centre of bookselling in Germany. The following statement of the number of new books offered at this literary fair, for 15 years, exhibits a surprising regularity of increase.

Years.	Works.	Years.	Works.	Years.	Works
1814	- 2,529	1819	- 3,916	1824	- 4,511
1815	- 2,750	1820	- 3,958	1825	- 4,836
1816	- 3,197	1821	- 3,997	1826	- 4,074
1817	- 3,352	1822	- 4,283	1827	- 5,108
1818	- 3,871	1823	- 4,309	1828	- 5,654

HANOVER.

WILLIAM, King of Hanover, (*William IV*, King of Great Britain.)

GOVERNMENT.

The King of Great Britain is King of Hanover; yet Great Britain and Hanover have no political incorporation with each other, but have different constitutions; and the succession to the throne in Hanover is limited to the male line. The power of the King is limited by the States, which consist of the nobility, the heads of the church, and the deputies of the towns.

The King's Ministry of State and Cabinet.

His Royal Highness the Duke of Cambridge, *Governor General.*

Count de Munster, *resident in Lond. as Min. Reporter (Rapporteur.)*

M. de Bremer, *Min. of For. Affairs, Finance, and of the Post-Office.*

M. de Meding, *Minister of the Interior, Police, Mines, Commerce, and Manufactures.*

M. de Ompteda, *Minister of War; of the Boundaries of the Kingdom, Roads, and Bridges.*

Baron de Strahlenheim, *Minister of Ecclesiastical Affairs, the University of Gottingen, Public Instruction, the Administration of Convents, National Economy, and Fiefs.*

M. de Schindt Phiseldeck, *Privy Coun. and Head of the Dep. of Just.*

WURTEMBERG.

KING AND ROYAL FAMILY.

WILLIAM, King of Wurtemberg, Duke of Swabia and Teck; b. Sept. 27, 1781; succeeded his father *Frederick*, Oct. 30, 1816; m. (I.) Jan. 24, 1816, *Catharine*, sister of the Emperor of Russia and widow of the Duke of Oldenburg, b. May 21, 1788, d. Jan. 9, 1819:—m. (II.) April 15, 1820,

PAULINA, daughter of his uncle, Duke Alexander, b. Sept. 11, 1800:—Issue, by the first marriage:—

1. *Maria*; b. Oct. 30, 1816.—2. *Sophia*; b. June 17, 1818.—Issue by the 2d marriage:—3. *Catharine*; b. Aug. 24, 1821.—4. CHARLES, *Prince Royal*; b. March 6, 1823;—5. *Augustus*; b. Oct. 4, 1826.

GOVERNMENT.

The government is a constitutional monarchy. The Constitution which was formed in 1819, provides for a legislative Assembly of States, composed of two houses, one consisting of members chosen for life among the nobles, and the other of members elected by the people for the term of six years.

Privy Council.

M. de Otto,	<i>President of the Privy Council.</i>
Baron de Mauckler,	<i>Minister of Justice.</i>
Count de Beroldingen,	<i>Minister of Foreign Affairs.</i>
M. de Schmidthin,	<i>Min. of the Home Dep. and of Eccles. Affairs.</i>
Count de Franquemont,	<i>Minister of War.</i>
Baron de Varnbuler,	<i>Minister of Finance.</i>

BAVARIA.

KING AND ROYAL FAMILY.

LOUIS, King of Bavaria; b. Aug. 25, 1786, succeeded his father *Maximilian Joseph*, Oct. 13, 1825; m. Oct. 12, 1810, THERESA, daughter of the Duke of Saxe-Altenburg, b. July 8, 1792:—Issue:—

- | | |
|---|---|
| 1. MAXIMILIAN, <i>Prince Royal</i> ;
b. Nov. 28, 1811. | 5. <i>Adeline</i> ; b. March 19, 1823. |
| 2. <i>Matilda</i> ; b. Aug. 30, 1813. | 6. <i>Hildegarde</i> ; b. June 10, 1825. |
| 3. <i>Otho</i> ; b. June 1, 1815. | 7. <i>Alexandrina</i> ; b. Aug. 26, 1826. |
| 4. <i>Leopold</i> ; b. March 14, 1821. | 8. <i>Albert</i> ; b. July 19, 1828. |

GOVERNMENT.

The government has been, since 1818, a constitutional monarchy. The Parliament or Diet is composed of two chambers or houses, namely, a Senate or Chamber of Peers, and a House of Commons or Chamber of Deputies, consisting of representatives of the lower nobility, the Catholic and Protestant clergy, cities, towns, and agriculturists. The Ministers are responsible; though they have great power.

AUSTRIA.

EMPEROR AND IMPERIAL FAMILY.

FRANCIS, Emperor of Austria, King of Hungary, Bohemia, Lombardy, and Venice, and President of the German Confederation; b. at Florence, Feb. 12, 1768; succeeded his father *Leopold II*, as Emperor of Germany, July 7, 1792; declared himself Hereditary Emperor of Austria, Aug. 11, 1804, and resigned his title of Emperor of Germany, Aug. 6, 1806; m. (I.) Jan. 6, 1788, *Elizabeth* of Wurtemberg, who died 1790; m. (II.) Aug. 14, 1790, *Maria Theresa*, daughter of Ferdinand IV of Sicily, who died April 13, 1807; m. (III.) Jan. 9, 1808, *Maria Louisa Beatrix*, daughter of the Duke of Modena, who died April 7, 1816; m. (IV.) Nov. 10, 1816, CARO-

LINE AUGUSTA, daughter of the king of Bavaria:—Issue by the 2d marriage:—

1. *Maria Louisa*; b. Dec. 12, 1791; m. 1810, to the Emperor Napoleon Bonaparte: [issue; *Francis Joseph Charles* [Napoleon] Duke of Reichstadt, b. March 20, 1811]; created Duchess of Parma, May 30, 1814.

2. **FERDINAND**, *Crown Prince*; b. April 19, 1793.

3. *Maria Carolina*, Princess of Salerno; b. March 1, 1798.

4. *Carolina Ferdinanda*; b. April 8, 1801; m. Oct. 7, 1819, to Prince Frederick Augustus of Saxony.

5. *Francis Charles Joseph*; b. Dec. 9, 1802; m. Nov. 4, 1824, Sophia, sister of the king of Bavaria.

6. *Maria Anne Frances*; b. June 8, 1804.

Princes of the Blood.

1. *Archduke Charles*, Palatine & Viceroy of Bohemia; b. March 9, 1771.

2. *Archduke Joseph*, Palatine and Lieut. of Hungary; b. March 9, 1776.

3. *Archduke Anthony*, G. M. of the Teutonic Order; b. Aug. 31, 1779.

4. *Archduke John*, General of Cavalry; b. Jan 20, 1782.

5. *Archduke Renier*, Viceroy of Lombardy and Venice; b. Sept. 30, 1783.

6. *Archduke Louis*; b. Dec. 13, 1784.

7. *Archduke Rodolph*; Card. and Archb. of Olmutz; b. Jan. 8, 1788.

GOVERNMENT.

The government of the Austrian Empire is mainly an absolute monarchy, and is noted for its arbitrary and illiberal policy in prohibiting political discussions, and suppressing liberal opinions. Yet in some of the states the power of the emperor is limited by constitutional provisions, as in Hungary, where certain powers are possessed by the Diet, which is required to be convoked at least once in three years.

MINISTERS OF STATE AND CONFERENCE.

Prince Clement de Metternich,

Count Francis Saurau,

Count Henry Bellegarde,

Count Francis Kollowrat-Liebsteinski,

Chevalier de Plenczig.

M. Anthony Martin, *Director of the Cabinet.*

Privy Chancery of the Household, Court, and State.

Prince de Metternich, *Chancellor of the Household, Court, and State, (Minister of Foreign Affairs)*; *Counsellor of State.*

Baron de Struner, 13 *Aulic Counsellors*, and 5 *Counsellors.*

Chancery of the united Court.

Count de Saurau, *High Chancellor and Minister of the Home Department*; 3 *Chancellors of the Court.*

Count Anthony Mitrowsky, Baron de Geislern, Chevalier Stahl; 16 *Aulic Counsellors.*

Chancery of the Court of Hungary.

Adam Count Reviczky de Revisnye, *Chancellor of Court*; John Baron de Malonyai de Vicsay, *Vice-Chancellor*; 10 *Aulic Counsellors.*

Chancery of the Court of Transylvania.

Joseph Baron Miske de Magyar, *President*; 4 *Counsellors of Court.*

Michael Count Nadaad, *Minister of Finance.*

Baron Ferdinand de Fechtig, *President of the High Court of Justice.*

Count de Sedlnitzky, *President of the High-Police and Censorship.*

Prince Xavier de Hohenzollern-Hechingen, *President of the Council of War.*

SPAIN.

KING AND ROYAL FAMILY.

FERDINAND VII., King of Spain and the Indies; Most Catholic; b. Oct. 14, 1784; succeeded to the throne on the abdication of his father *Charles IV.*, March 19, 1808; m. (I.) Sept. 29, 1816, *Isabella Maria*, Infanta of Portugal, b. May 19, 1797, d. Dec. 26, 1818: m. (II.) *Maria Josephina*, niece of the King of Saxony, d. May, 1829; m. (III.) Dec. 4, 1829, *MARIA CHRISTINA*, daughter of the King of the Two Sicilies:—Issue; a daughter, b. 1830.

Princes of the Blood.

Don Charles Isidore, Infant, brother of the King; b. March 29, 1788; m. Sept. 29, 1816, *Maria Frances*, Infant of Portugal:—Issue; *Charles Louis*, b. Jan. 31, 1818; *John Charles*, b. May 15, 1822; *Ferdinand*, b. Oct. 13, 1824.

Don Francis de Paula, Infant; b. March 10, 1794; m. June 12, 1819, *Louisa Charlotte*, daughter of the King of the Two Sicilies:—Issue; *Isabella*, b. May 18, 1821; *Francis*, b. May 13, 1822; *Henry*, b. April 17, 1823; *Louisa*, b. June 12, 1824; *Edward*, b. April 4, 1826; *Josephine*, b. May 25, 1827; *Maria*, b. Nov. 16, 1828.

GOVERNMENT.

The government still remains an absolute, hereditary monarchy, though several unsuccessful attempts have been made to establish a constitutional government. The succession was limited to the male line till April 8, 1830, when, by a royal ordinance, females were rendered capable of succeeding to the throne.

Council of Ministers.

M. Salmon, *Minister of Foreign Affairs* (ad interim).

Don Francisco Tadeo de Calomarde, *Minister of Grace and Justice*.

Marquis de Zambrano, *Minister of War*.

Don Louis Maria de Salazar, *Minister of Marine*.

Don Louis Lopez de Ballesteros, *Minister of Finance*.

PORTUGAL.

KING AND ROYAL FAMILY.

MIGUEL, King of Portugal and the Algarves; 2d son of *John VI.* of Portugal; b. Oct. 26, 1802; affianced at Vienna, Oct. 29, 1826, by proxy to his niece *Maria de Gloria*, who was declared Queen of Portugal; took the oath of Feb. 26, 1828, as Regent of Portugal; was proclaimed King, by the Cortes, June 26, 1828, and formally assumed the title of King of Portugal and the Algarves, July 4, 1828.

[*MARIA DE GLORIA*, eldest daughter of *Pedro*, Emperor of Brazil, eldest son of *John VI.* of Portugal; b. April 14, 1819; declared Queen of Portugal in consequence of the abdication of her father, May 2, 1826.—*Pedro* having become Emperor of Brazil, under the conditions of the Constitution of that country, by an act of May 2, 1826, abdicated the throne of Portugal in favor of his daughter, promulgated a Constitution for the kingdom with a Cortes, and appointed his brother *Don Miguel* regent, during the minority of his daughter. *Miguel*, after having sworn to the Constitution, renounced it, assumed absolute sovereignty in his own right, and is now *de facto* King of Portugal.]

SARDINIA.

CHARLES FELIX, King of Sardinia, Duke of Savoy, Piedmont, and Genoa; b. April 6, 1765; succeeded to the throne on the abdication of his brother, *Victor Emanuel*, March 13, 1821; m. March 7, 1807, **MARIA CHRISTINA**, daughter of Ferdinand IV., of the Two Sicilies, b. Jan. 17, 1779.

STATES OF THE CHURCH.

THE government is an elective, absolute monarchy; the sovereign is the Pope who is chosen for life, by the college of Cardinals from their own body.

POPE PIUS VIII. (*Francis Xav. Castiglioni*); b. at Cingoli, Nov. 20, 1761; created Cardinal March 8, 1816; elected Pope March 31, 1829.

Cardinals. The Cardinals have the rank of princes, are next in dignity to the Pope, and together with him, they form the sacred college. Their number which was fixed, in 1526, at 70, is not generally full. They are divided into three ranks, of which the numbers, in 1829, were 4 Cardinal-Bishops, 43 Cardinal-Priests, and 11 Cardinal-Deacons;—total 58.

THE TWO SICILIES.

KING AND ROYAL FAMILY.

FRANCIS, King of the Two Sicilies; b. April 19, 1777; succeeded his father *Ferdinand IV.*, Jan. 4, 1825; m. (I.) April 24, 1797, *Maria Clementina*, sister of the Emperor of Austria:—(Issue; *Maria Caroline*, b. Nov. 5, 1788, m. Feb. 14, to the Duke of Berry):—m. (II.) Oct. 6, 1802, **MARIA ISABELLA**, sister of the King of Spain, b. Nov. 5, 1798:—Issue:—

- | | |
|--|--|
| 2. <i>Louisa Charlotte</i> ; b. Oct. 24, 1804; m. June 12, 1819, Don Francis of Spain. | 7. <i>Antoinette</i> ; b. Dec. 19, 1814. |
| 3. <i>Maria Christina</i> , Q. Spain; b. Ap. 27, 1806. | 8. <i>Antonio</i> , Count of Lecce; b. Sept. 23, 1816. |
| 4. FERDINAND , Duke of Calabria; b. Jan. 12, 1810. | 9. <i>Amelia</i> ; b. Feb. 25, 1818. |
| 5. <i>Charles</i> , Prince of Capua; b. Dec. 10, 1811. | 10. <i>Caroline</i> ; b. Feb. 23, 1818. |
| 6. <i>Leopold</i> , C. of Syracuse; b. May 22, 1813. | 11. <i>Theresa</i> ; b. March 14, 1822. |
| | 12. <i>Louis</i> , Count of Aquila; b. July 19, 1824. |
| | 13. <i>Francis</i> , C. of Trapani; b. Aug. 13, 1827. |

TURKEY.

SULTAN AND HIS FAMILY.

MAHMOUD II., Grand Seignior and Sultan of the Ottoman Empire; b. July 20, 1785; called to the throne on the deposition of his uncle *Selim III.*, July 28, 1808:—Issue:—*Abdul Medschid*; b. April 20, 1823.—*Abdulhamid*; b. Feb. 18, 1827;—and several daughters.

GOVERNMENT.

The government is an absolute monarchy; the sovereign, who is styled Sultan, Grand Seignior, or Emperor, is the sole fountain of honor and office, and is the absolute master of the property and lives of his subjects. His cabinet council is styled the *Divan*; his court, the *Porte* or *Sublime Porte*.

Reschid Mehemed Pacha, *Grand Vizier*, (Prime Minister.)

Jafendschi-Sade-Effendi, *Mufti*, *Head of the Religion of the State*.

Papudsch-Ahmed-Pacha, *Capudan-Pacha*, or *Grand Admiral*.

Mohamed-Seid-Pertew-Effendi, *Reis-Effendi*, *Min. of Foreign Affairs*.

Ali-Nedschib-Bey, *Kiaja-Bey*, *Minister of the Interior*.

Hassan-Jasin-Effendi, *Nischandschi-Baschi*, *Keeper of the Seals*.

Mehmed-Sadik-Effendi, *Defterdar*, *Minister of Finance*.

Chosrew-Mehmed-Pacha, *Seraskier*, *Generalsissimo*.

Elhadsch-Ali-Ber, *Tersana-Emini*, *Minister of the Marine*.

MOLDAVIA. Jean Stroudza, *Hospodar*; inaugurated July 21, 1822.

WALLACHIA. Gregory Ghika, *Hospodar*; inaugurated Sept. 21, 1822.

GREECE.

THE Greeks revolted from the Turkish domination in 1821, asserted independence, and established a republican government. The Turks attempted to reduce them to subjection; a destructive war ensued, which lasted several years; at length the governments of Russia, France, and Great Britain interfered; and the Sultan of Turkey was induced to consent to the independence of Greece. In 1827, *Count Capo d'Istria* was elected President of Greece for the term of seven years; in January, 1828, he entered upon the duties of his office, and he has succeeded in establishing an efficient administration, and in gaining the confidence and affection of the people.

In February, 1830, the plenipotentiaries of Great Britain, France, and Russia, appointed *Prince Leopold* of Saxe-Coburg to be the hereditary sovereign of Greece, with the title of "Sovereign Prince." The Prince accepted the appointment; but on learning the actual condition of the country and the feelings of the people with regard to an appointment in which they had no voice, he afterwards resigned it.

The government was reorganized by the fourth national Congress, which met at Argos in the summer of 1829, *Capo d'Istria* still remaining at its head. The *Panhellenium*, a Council of 27 members, was replaced by another body consisting also of 27 members, called the *Gerousia*, Senate or Congress. This body gives its opinion on matters of legislation; but has not the power of a negative upon the decisions of the President. Besides the Senate, there is a Ministry, consisting of four departments, each having a secretary, viz. the Home Department; Foreign Affairs, including Commerce; the Judiciary; and Public Education and Ecclesiastical Affairs.

The country of Greece, which is liberated, comprises the Morea, the most of the continent lying south of ancient Thessaly and Epirus, the island of Negropont and most of the smaller islands in the Archipelago, leaving Candia, Samos, and Scio in the possession of the Turks. The total area is not far from 16,000 square miles. "The Peloponnesus contains about 280,000 inhabitants; the islands about 175,000; and continental Greece, including Acarnania and Ætolia, about 180,000;—in all 635,000 souls."—

See *Anderson's "Observations upon the Peloponnesus and the Greek Islands, made in 1829."*

ASIATIC STATES.

Persia—FETH-ALI, *Schah*, b. 1768, ascended the throne 1796.

Abbas Mirza, heir presumptive, b. 1785.

Bokhara and Samarcand,—MIR-HAIDER, *Khan*, 1826.

Mecca—YAHIA, *Scherif*, Nov. 2, 1813.

China—TAOU-KWANG, succeeded his father *Kia-King*, Sept. 2, 1820.

NORTH-AFRICAN STATES.

Egypt—MOMAMMED-ALI, *Pacha*, (b. 1769,) May 14, 1805.

Tripoli—SIDI-YOUSOUF, *Pacha*, 1795.

Tunis—SIDI-HASSAN, *Bey*, March 23, 1824.

Algiers—HOUSSAIN, *Dey*, March 1, 1818; dethroned July 5, 1830.

Morocco—MOULEY-ABD-ERRAHMAN, *Sultan*, Nov. 28, 1822.

TEMPERANCE SOCIETIES.

In the first volume of the American Almanac, in the article on the "Use and Abuse of Ardent Spirits," it was shown that from 30,000 to 40,000 die annually in the United States in consequence of hard drinking. Some remarks were also made on the vast expense of money and the destruction of happiness and character, which attend this loss of life; and it was also shown that a moderate use of ardent spirits, even when it does not lead to intemperance, is useless, if not injurious, to persons in health.

We are now happy in being able to lay before our readers a series of important facts, which show that a deep and most salutary impression has been made upon the public mind by the influence of Temperance Societies; and which also afford ground for hope that a most pernicious and destructive habit may be eventually banished from the United States. The friends of these societies ascribe intemperance, with its train of evils, not to the tastes and habits of a few, but to the general use of spirituous liquors as an article of luxury, and as an auxiliary to labor in the field and the workshop; and it is against these uses that they especially direct their efforts. The facts which are here presented, have been brought to light chiefly by the efforts of the American Temperance Society, and have been furnished by a gentleman favorably situated for obtaining the most authentic information.

The American Temperance Society, which was formed in February, 1826, employs two agents in travelling from place to place to promote the objects of the institution; and a newspaper entitled "The Journal of Humanity," printed at Andover, Mass., is devoted to the same object. As many as thirteen state societies have already been formed, one in each of the following states, New Hampshire, Vermont, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Virginia, South Carolina, Georgia, Mississippi, Ohio, and Indiana.

The number of minor associations noticed in the publications of the American Temperance Society up to Aug. 19, 1830, was 1605, viz. in Maine 98, New Hampshire 84, Vermont 119, Massachusetts 232, Rhode Island 11, Connecticut 181, New York 372, New Jersey 30, Pennsylvania 95, Delaware 2, Maryland 11, District of Columbia 4, Virginia 111, North Carolina 17, South Carolina 11, Georgia 47, Florida 1, Alabama 8, Mississippi 9, Louisiana 2, Tennessee 11, Kentucky 19, Ohio 87, Indiana 26, Illinois 4, Missouri 3, Michigan 10.

The societies in these lists are not all connected with the A. T. S., but they all make the same fundamental principle,—entire abstinence from ardent spirits,—the basis of their efforts. Many societies doubtless exist, of which the officers of the A. T. S. have received no information. The whole number of members of these associations cannot be stated. In the

last Report of the A. T. S. it was estimated at 100,000, and more than 60,000 new members were reported to the office of the Journal of Humanity during the first eight months of the year 1830.

I. *The influence of the Societies extends to all classes of the community.* The practice of entire abstinence has been recommended by many of our largest and most respectable medical societies, by ecclesiastical bodies almost without exception in all parts of the country, and by members of the bar in several counties. Societies to promote it have been formed by females, by the young, by mechanics, by apprentices, by people of color, in churches, in the U. S. Army (at five military stations). Seamen are adopting it extensively: more than 40 vessels from Charleston, more than 50 from Boston, 56 from Gloucester, and 15 (square-rigged) from Portland, are now navigated without ardent spirit. In our largest and best regulated prisons and alms-houses, it is not allowed. In Connecticut, more than 1000 farms are known to be cultivated without it. In New Haven, there are more than 100 master builders, mechanics, and artisans, who use none themselves, and allow none among their workmen.

II. *It has diminished the number of distillers and venders of ardent spirits.* The First Annual Report of the N. York State Society (Jan. 1830) mentions the discontinuance of 85 distilleries in that State (12 in one county), and that of the Connecticut Society (May, 1830) states that 30 had been stopped, within its limits, during the year preceding. Out of 14 distilleries in one neighborhood in Westmoreland County, Pa., 10 have been stopped within a few months. "In Connecticut," says the Report above-mentioned, "more than 150 retailers have voluntarily relinquished the business within a year." In New London County only, 45 have ceased to deal in ardent spirit. In Sandy Hill, New York, where 20 licenses were formerly granted, there are now but 2. In Augusta, Ky., and Kingston, Me., retailing has ceased. In December, 1829, the Secretary of the A. T. S. had received information of more than 400 dealers in ardent spirit, who had given up the business; and during the first three months of the year 1830, similar information respecting 267 others was received at the office of the Society. There is a large number of towns, mostly in New England, in which the traffic no longer exists. In Plymouth County, Mass., ardent spirit is retailed only by innkeepers. In Clinton County, N. Y., one fourth of the merchants have banished the article from their stores.

III. *It has greatly diminished the consumption of ardent spirits.* In proof of this we might refer to a large number of districts in different parts of the country, in which it has been found, by careful investigation, that the consumption of ardent spirits has diminished to the amount of one fourth, one half, two thirds, nine-tenths, and even more. But estimates founded on statements from the public offices will be more satisfactory.

(1.) The quantity of foreign distilled spirits entered at the Custom-House at Middletown, Connecticut, amounted, in 1828, to 186,845 gallons, in 1829 to 74,944, and in the first six months of 1830, to less than 4,000.

(2.) The Custom-House books at New Haven show that the number of hogsheads (averaging 110 gallons) of foreign spirit, entered there in 1826, was 1760, in 1827, 591, in 1828, 787, in 1829, 445, and for the first 6 months of 1830, 85, which is supposed to be more than half the import of the year.

(3.) The quantity of distilled liquors brought into Fredericksburg, Va., by water, was, in 1826, 126,273 gallons, and in the year ending July 1, 1830, 58,950 gallons.

(4.) The following table shows the amount of distilled liquors brought into the port of New York for the first six months of the years 1828, 1829, and 1830.

From January 1, to July 31,		1828	1829	1830
Brandy,	pipes	7,263	5,635	1,060
Gin,	do.	3,371	1,441	1,498
Rum,	punchéons	7,707	6,290	2,503
Total,		18,341	13,366	5,061

(5.) The following statement, from the same office, extends one year farther back and embraces periods of 12 months each.

	1827	1828	1829
Foreign distilled liquors imp'd, (galls.)	2,056,739	2,925,705	1,695,868
" " " exp'd, (do.)	126,534	186,894	428,775

Leaving for that market,	1,930,205	2,738,811	1,267,093
--------------------------	-----------	-----------	-----------

(6.) We refer, finally, respecting the consumption of foreign distilled spirits, to the Annual Reports of the Secretary of the Treasury. From these the following statement of the imports and exports of this article for the three years ending Sept. 30, 1829, is prepared :

	1826-7	1827-8	1828-9
Imp'd from Oct. 1, to Sept. 30, (galls.)	3,537,426	5,102,599	3,420,884
Exported " " "	223,815	255,341	905,006

Leaving for home consumption,	3,313,611	4,847,258	2,515,878
-------------------------------	-----------	-----------	-----------

Statement (1), omitting the last half year, shows a diminution of three fifths in a single year ;—Statement (2)—with the same omission—a diminution in 1829 of more than three-fifths from the average of the three preceding years ;—Statement (3), a diminution of more than one half in about three years ;—Statement (4), a diminution of more than two thirds from the average of two years (of which two, the last was about one third less than the preceding;)—Statement (5), a diminution of nearly one half from the average of two years ;—and Statement (6), a diminution of more than one third from an average of two years.

When we consider that none of these statements extend back beyond the date at which the efforts of the A. T. S. commenced, and that the imports have been rapidly diminishing down to the latest dates, it would seem that the decrease of consumption throughout the United States, must be at least 65 or 70 per cent. We will suppose it, however, to be only 50 per cent. The average for the two years ending Sept. 30, 1828, was 4,080,434 gallons at the expense of about as many dollars. The saving therefore, already effected in the article of foreign distilled spirit, amounts, on the lowest estimate, to more than \$2,000,000 a year.

Some may suppose that the consumption of the domestic article has increased. That such is not the fact might be inferred from the diminished number of distilleries and retailers of spirits, and from the known fact that a large number of retailers, especially in New England, continue the sale of foreign who have abandoned that of domestic liquors. We are able, however, to refer here also to the more satisfactory authority of official documents.

The quantity of whiskey brought into Fredericksburg, by water, in the year 1826, was 114,277 galls., and in the year ending July 1, 1830, 52,621 galls.

From Aug. 1, to Dec. 1, 1828, the quantity of whiskey that passed Utica on the canal was 1,053,305 galls. ;—during the same months of the year 1829, only 345,159 galls.,—although the quantity of wheat, flour, ashes, &c. was far greater during the latter than during the former period.

Most of the whiskey brought to Philadelphia comes from the West and is inspected in what is called the Western District. The quantity inspected there in 1823, was 2,714,204 gallons, and in 1829, 1,822,400 galls.

The quantity of domestic spirits inspected in the city of New York in 1827, was 98,310 casks; in 1828, 111,504 casks; and in 1829, 79,913 casks.

These statements warrant the conclusion that the consumption of whiskey, in the Middle States, has decreased at least one third.

Of the saving in expense, suffering, and crime, effected by this diminution of the consumption of ardent spirit, the following estimates will serve to form some conception.

In 1810, the quantity of distilled spirituous liquors consumed in the United States amounted to about $4\frac{1}{2}$ galls. to each inhabitant. Did our present population drink at the same rate, the consumption (supposing our population to be 13,000,000) would amount to 58,500,000 galls. a year. Supposing the consumption to be only one third less in proportion to the number of inhabitants, and the average expense per gall. to the consumer to be 40 cents, there is a saving of \$7,800,000 a year in the cost of the liquor.

In the 4th section of his Treatise on State Prison Punishments, &c. (published in the Journal of Humanity, Nov. 25, 1829), Samuel M. Hopkins, Esq. who has paid great attention to the subject and enjoyed uncommon advantages for investigating it, for a series of years, gives a variety of facts and estimates, from which he infers that the annual pecuniary loss to the people of the United States by crime, is \$8,700,000,—occasioned by 15,000 criminals, 11,000 of whom are at large. In another paper, furnished by the same gentleman to the Executive Committee of the New York State Temperance Society, facts are stated from which it is inferred that at least 37 parts out of 54 of the above sum—or \$5,911,168—must be charged to the account of intemperance. And from a similar investigation respecting pauperism, in the same paper, Mr. Hopkins concludes that intemperance must be charged with at least \$2,534,000 a year on that account. These estimates, it should be noticed, show only the annual expense of criminals and paupers *after they have become such in consequence of the use of ardent spirit*. The commencement of the reformation is too recent to furnish any statistics of the actual decrease of pauperism and crime.

IV. *It has caused the reformation of a large number of intemperate persons.* This was not a prominent object with those who first adopted and recommended the measures at present pursued, and it must now be regarded as an incidental benefit of efforts intended for the good of others. It is however great,—very much surpassing expectation. Instances of the reformation of intemperate persons, through the influence of Temperance Societies, are frequent in all parts of the country. The Third Annual Report of the A. T. S. mentions more than 700 such cases. The Secretary of the New Hampshire Society states the ascertained number in that state at about 100. In Windham County, Conn. there are 50 cases; in Washington County, Md., 30; in Orange County, N. C., 20.

CHRONICLE OF EVENTS

FROM SEPT. 1829, TO OCT. 1830.

[The figures in the margin designate the day of the month.]

SEPTEMBER.

3. The blockade of the Dardanelles raised.
12. Capitulation of the Spanish Gen. Barradas to the Mexican General Santa Anna, at Tampico, Mexico. This terminated the expedition to subdue Mexico after five engagements.
14. A treaty of peace between Russia and Turkey signed at Adrianople.
15. Slavery abolished in Mexico by a proclamation of the President.
15. Died, at Vauitza, Greece, Gen. Dantzel, commander of the Greek army.
15. Died, at Dublin, Ireland, James Hamilton, the inventor of the Hamiltonian method of instruction.
20. The treaty of Adrianople ratified by the Porte.
22. Peace concluded between Colombia and Peru.
24. A victory gained by the Greeks, under Gen. Ypsilanti, over the Turks near Petria in Livadia.
26. Revolution in Buenos Ayres. The government restored to those from whom it had been wrested by Lavalle.
26. Venezuela separates itself from the Republic of Colombia, and declares itself independent. Gen. Paez placed at the head of affairs.

OCTOBER.

5. A Convention of ninety-six Delegates assemble at Richmond, Virginia, to amend the Constitution of that state, or to frame a new one.
6. Died, in Louisiana, Peter Derbigny, governor of the state.
10. The treaty of peace with Colombia ratified by the government of Peru.
11. Adrianople evacuated by the Turks.
12. Don Miguel acknowledged by Spain legitimate sovereign of Portugal.
16. Arrival of the Empress Amelia Eugenia in Brazil.
17. The Chesapeake and Delaware Canal opened.
18. Died, at New York, Wm. Harris, D.D., Principal of Columbia College.

NOVEMBER.

9. Separation of Yucatan from the Mexican Republic, and union with the Republic of Central America.
11. A. Wylie, D. D. inaugurated President of Indiana College.
16. The Province of Concepcion declares itself independent of Chili.
24. Great fire at Camden, S. C. Loss estimated at \$150,000.
26. Colossal statue of Washington placed on the Monument in Baltimore.
26. Died, at Philadelphia, Bushrod Washington, of Mount Vernon, Virginia, one of the judges of the Supreme Court of the U. S.; aged 71.
26. Great inundation of the Nile in Egypt begins; about 34,000 perish.

DECEMBER.

4. Commencement of a Revolution in Mexico. The Vice-President, Bustamante, issues a proclamation against the government of Guerrero, demanding the resignation of his extraordinary powers.
4. Abolition of the Suttie Rite in Hindostan by the English government.
5. Gen. Rosas elected President of Buenos Ayres in place of Gen. Lavalle.

7. Commencement of the first session of the twenty-first Congress.
11. A great fire in Cincinnati, Ohio.
12. Died, on a journey to Kentucky, William Stoughton, D.D., formerly President of Columbian College.
13. The Russian ship St. Nicholas explodes at Ismael.
14. Commencement of the civil war in Chili. Battle between the armies under Generals Luctra and Prieto, in which the latter was defeated.
19. Gen. Gamarra elected President, and Fuente Vice-President of Peru.
22. The 209th anniversary of the Landing of the Pilgrims celebrated at Plymouth. Oration by Wm. Sullivan, LL.D.
22. Died, in New York, John M. Mason, D.D.; aged 60.
23. Gen. Guerrero resigns the Presidency of Mexico. The new government settled under Bustamente, the former Vice-President.
24. A proclamation issued by General Bolivar convoking a Constituent Congress at Bogotá, to form a Constitution for Colombia.
24. Venice made a free port.

JANUARY.

7. Died, in London, Sir Th. Lawrence, President of the Royal Academy.
7. Death of the Queen of Portugal; aged 54.
13. Great fire at New Orleans. Loss estimated at \$300,000.
13. Mr. Foot's Resolution respecting the further survey of the public lands, which gives rise to an animated discussion in the U. S. Senate.
14. The amended Constitution of Virginia adopted by the Convention.
20. Gen. Bolivar issues a proclamation resigning his military and political offices. The Constituent Congress consisting of forty-seven Deputies assemble at Bogotá, of which Gen. Sucre is chosen President, and Bishop Esteves, Vice-President. The object of the Congress was, to form a Constitution for Colombia conformable to the spirit of the age, and the condition of the people; and to elect officers of Government.
22. The Provincial Parliament of Lower Canada opened at Quebec.
31. Very cold in New England; the thermometer in Boston 64° below 0 at sunrise; in Bangor, Me., 27° below 0.

FEBRUARY.

4. Meeting of the Parliament of Great Britain.
4. Prince Leopold of Saxe-Coburg elected Sovereign Prince of Greece by the plenipotentiaries of England, France, and Russia.
10. Remarkable shower in Union county, Kentucky.
21. A cotton manufactory at Saco, Me., burnt. Loss about \$300,000.
22. The petition of the English Jews for the removal of their civil disabilities, presented to the British Parliament.
26. Great fire at Bergen, Norway; 200 houses destroyed.
27. Died, at Jericho, Long Isl. Elias Hicks, of the Soc. of Friends; aged 82.

MARCH.

2. Meeting of the French Chambers of Peers and Deputies.
2. Great freshet at Vienna. The Danube rises 23 feet. The suburbs of the city containing 50,000 inhabitants, inundated.
5. Died, at Raleigh, John S. Ravenscroft, D.D., Bp. of N. C.; aged 58.
9. Died, at Rio de Janeiro, William Tudor, Chargé d'Affaires of the U. States at the Court of Brazil.
10. Died, at Hagerstown, Md., Chr. Newcomb, Bp. German Methodist Soc.
18. The answer of the French Chamber of Deputies made to the King's Speech, stating that a concurrence did not exist between the views of the government and the wishes of the nation; 221 voting in favor of it, 181 against it.

19. The French Chambers of Peers and Deputies prorogued till Sept. 1.
22. Ovalle elected President of Chili.
23. A violent hurricane in Washington county, Ohio.
23. Peace concluded at Buenos Ayres, between Buenos Ayres, Santa Fe, Entre Rios, and Corrientes.
26. A high tide along the coast of New England. In Boston the water rose 16½ feet, and caused much damage.
27. Died, at Bedford, Pa., John Tod, one of the judges of the Supreme Court of Pa.; aged 51.
29. Died, in London, Major James Rennel; aged 88.
30. A violent hurricane in Maury county, Tennessee.

APRIL.

4. Yucatan declares itself independent.
5. The bill to remove the civil disabilities of the Jews, introduced into the British Parliament.
6. Joseph White, a wealthy merchant, aged 81, assassinated in his bed in Salem, Mass.
6. Death of Louis X., Grand Duke of Hesse-Darmstadt; aged 77.
8. Ferdinand VII. of Spain issues a decree abolishing the operation of the Salic law in the succession to the Spanish Monarchy.
12. Violent earthquakes in Central America; several towns destroyed.
13. The navigation of the Black Sea opened to American vessels.
17. Died, at Philadelphia, Dr. John Godman; aged 32.
20. The Sultan of Turkey accedes to the resolutions adopted by the three Allied Powers respecting Greece.
21. The boiler of the steam-boat Chief Justice Marshall burst at Newburg, N. Y. About 15 persons killed.
22. A revolution, headed by Gen. Urdaneta, at Bogotá, Colombia.
25. The new Republican Constitution of Colombia signed by the members of the Constituent Congress, and the Executive.
26. Died, at Rome, Mad. Letitia Bonaparte, mother of Napoleon; aged 86.
27. The city of Guatemala almost destroyed by earthquakes.
27. The bill for removing the Indians passed by the Senate of the United States. Yeas, 27, nays 20.

MAY.

4. The Constituent Congress of Colombia elect Joaquin Mosquera, President, and Domingo Cuicedo Vice-President of that Republic.
7. A Treaty between the United States and Turkey signed at Constantinople, securing to the United States the free navigation of the Black Sea and the trade of the Turkish Empire.
11. The Constituent Congress of Colombia, after having formed a republican constitution and elected the officers of government, adjourn *sine die*.
